OFFICE OF PREVENTION, PESTICIDE AND TOXIC SUBSTANCE

Cortney Killion Mareva, Inc. 594 N. Ferdon Blvd Crestview, FL 32536

Subject: **Revablue** EPA Registration No. 69461-2 Application Date: January 15, 2010 Receipt Date: February 18, 2010

Dear Ms. Killion:

The following amendment, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended, is accepted.

Proposed Amendment:

Revised Label

Other Comment:

1.) PRN 2005-1, Guidance for Mandatory and Advisory Labeling Statements, states that: Mandatory statements, which commonly use imperative verbs such as "must" or "shall", either require action or prohibit the user from taking certain action. Advisory statements generally provide information, either in support of the mandatory statements or about the product in general. To ensure that the intent of each labeling statement is clear, mandatory statements need to be clearly distinguishable from advisory statements.

Therefore you must replace the word "should" to "must" whenever it appears on page 2 of you label under the Directions For Use section.

- 2.) According to PRN 2001-1, First Aid Statements must be organized so that the most severe routes of exposure, as demonstrated by the toxicity classification, are listed first. Therefore reorder the First Aid Statement as follows:
 - 1. If swallowed
 - 2. If in eyes
 - 3. If inhaled
 - 4. If on skin
- 3.) The "Precautionary Statements" like the "First Aid" Statements must be organized by the most severe routes of exposure. Therefore, revise this section to read:

Caution. Causes moderate eve in a state of the swallowed. If absorbed through

the buyer or user or any other party and all liability arising from this product to any person or entity is disclaimed.

Batch Code: See Bottle.

DIRECTIONS FOR USE:

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

For control of algae in swimming pools, exterior spas, whirlpools, hot tubs, decorative fountains, and ponds that do not contain fish.

REVABLUE is used to control the growth of algae in swimming pools, exterior spas, whirlpools, hot tubs, decorative fountains, and ponds that do not container fish. For maximum effectiveness pools, spas, whirlpools, hot tubs, decorative fountains, and ponds containing heavy growth of algae should be cleaned prior to using REVABLUE.

For pools having just visible algae growth, add an initial dose of 24 to 36 fluid ounces of REVABLUE per 10,000 gallons of water and remove settled algae debris by cleaning. For treatment of a freshly cleaned and filled pool add initially 13 to 24 fluid ounces of REVABLUE per 10,000 gallons of water. Subsequent additions of 4 to 9 fluid ounces of REVABLUE per 10,000 gallons of water should be made every 5 to 7_{12} days after initial treatment for maintenance.

Spas, whirlpools, hot tubs, decorative fountains, and ponds having just visible algae growth require an initial dose of 2 to 4 fluid ounces of REVABLUE per 1,000 gallons of water. For treatment of a freshly cleaned spa, whirlpool, hot tub, decorative fountain, or pond, add initially 1 to 2 fluid ounces of REVABLUE per 1,000 gallons of water. Subsequent addition of 0.5 to 0.8 fluid ounces of REVABLUE should be made every 5 to 7 days after initial treatment for maintenance.

REVABLUE will prevent growth of most algae during the off season winter months when pools are not in use. For pools which have been properly treated during the swimming season and are free of visible algae, add 13 to 21 fluid ounces of algaecide per 10,000 gallons of water. If at the end of the swimming season pools have some visible algae growth, add 25 to 37 fluid ounces per 10,000 gallons. It is necessary that a uniform distribution of algaecide throughout the water and the pool be made for maximum effectiveness. If pool is not covered, it may be necessary to repeat the treatment one or more times during the season.

REVABLUE is compatible with those chemicals normally used to treat pools and spas and is effective at both acid and alkaline pH. REVABLUE can be used in pools and spas treated with chlorine chemicals and may reduce the amount of those chemicals normally required. However, do not mix REVABLUE with concentrated dry or liquid chlorine products.
