IRRIGATION WATER STORAGE AND SUPPLY SYSTEMS; POTABLE WATER RESERVOIRS; FARM, FISH, AND FIRE PONDS; LAKE AND FISH HATCHERIES

Apply as a surface spray using the amounts of products shown in the application chart. Before applying the concentrated liquid product, dilute with at least nine parts of water. Use hand or power sprayer for best distribution of the diluted product solution. Break up floating algae mats before spraying. Apply when algae growth first becomes visible and water temperature is above 60 degrees F. Treatment of algae can result in oxygen loss from decomposition of dead algae. This loss can cause fish suffocation. Therefore, to minimize this hazard, treat 1/3 to ½ of water area in single operation and wait at least 10 to 14 days between treatments. Begin treatment along the shore and proceed outwards in bands to allow fish to move into untreated areas. Consult your State Fish and Game Agency before applying this product to public waters.

Dosage rates for application of [this product] are given in gallons per acre foot of water. The most effective algae control is obtained under calm and sunny conditions. Free floating algae such Microcystis, Oscillatoria, Anabaena and Aphenizomenon are controlled with ³/₄ gallons of [this product] per acre foot of water.
