#### **GENERAL INFORMATION**

SPOD-X LC is a highly selective insecticide for use against the insects and on the crops listed on this label. Always follow these directions:

Treat when larvae are young (early instars) and are actively feeding. Apply before extensive damage has occurred. When insect infestations are heavy, use the higher label rates. Thorough spray coverage is essential for good insect control. Apply SPOD-X LC by conventional ground or aerial application equipment with quantities of water to provide thorough coverage of infested plants without runoff. The amount of water needed per acre will depend on weather, spray equipment, and local experience. Use the application amount of SPOD-X LC in 20-100 gallons of water per acre for ground application and in at least 5 gallons of water for aerial application. Use of a spreader/sticker and ultraviolet screening agent can enhance the performance of this product. Fill the mix tank with desired quantity of water. Use agitation during mixing. If spreader/sticker or ultraviolet screen is used, add prior to the addition of SPOD-X LC. Mixing time can be reduced by premixing SPOD-X LC with a small amount of water and vigorously agitating before adding to the tank. Mix final formulation for 10-30 minutes.
