Page 1: The claim, "Safe for all Washable Surfaces," should be revised to "<i>Will not harm all washable surfaces</i>". d. Page 2: Under Food Service second paragraph, the statement, "It can also be used to pre-clean and disinfect.....equipment [& devices]," should be deleted. - e. Pages 2-3: Under General Disinfection Cleaner in the second paragraph, the use of the term, ideal, will be considered acceptable when used to describe non-pesticidal properties; such as, the non-abrasive formula is ideal for use on hard, non-porous surfaces. However, the term, "ideal, will be considered unacceptable if used to describe the pesticidal properties of this product; such as, the formula is ideal for use as a disinfectant or sanitizer.
- f. Pages 2-3: Under General Disinfectant Cleaner, Hospitals/Health Care Facilities, and Food Service second paragraph, the phrase, "a variety of" needs to be replaced with "the following." Also, delete "typically" from the phrase "typically associated with" which is stated in the second paragraph for each use site heading.
- g. Page 3: Under Non-Acid Bowl [& Bathroom] Disinfectant Cleaner, the surfaces, bowl brushes and bowl mops, need to be deleted because they are considered to be porous surfaces.
- h. Pages 1, 4, 5, and 10: Under Non-food Contact Surface Sanitizer and Non-food Contact Sanitizing directions, the contact time must be changed to 60 seconds. The claim, "sanitizes in 30 seconds" will need to be revised to state 60 seconds. Although data was submitted to support the 30 seconds contact time, the minimum contact time allowed for non-food contact sanitization claim is 60 seconds. You should refer to the Agency's efficacy review dated 7/14/99 which was attached to the Agency letter dated 8/13/99.
- i. Pages 4 and 9: You will need to separate the organisms, HIV-1 (AIDS virus) and *Trichophyton mentagrophytes*, from the general list of organisms because they have different contact times, one and ten minutes respectively. The asterisk delineations are too small.

When you list HIV-1(AIDS virus), you should state "*Kills HIV (AIDS virus) when used as directed on hard, non-porous surfaces with a 1 minute contact time.*"

When you list *Trichophyton mentagrophytes* with its appropriate contact time, you should also include specific sites or surfaces; for example, "*Kills Trichophyton mentagrophytes that causes Athletes foot fungus when used as directed for disinfection with a contact time of 10 minutes on hard, non-porous surfaces in bathrooms including shower stalls, floors, and glazed bathroom tiles.*"

- j. Page 5: The heading, "For Use as a Cleaner," needs to state "For Use as a Cleaner and/or Deodorizer."
- k. Page 6: Under Treatment of Animal Housing Facilities, the seventh step should be revised by stating, "*To disinfect* feed racks, troughs, automatic feeders,

fountains, and watering appliances scrub with use solution, let stand for ten (10) minutes. Then thoroughly scrub all treated surfaces with soap or a detergent and rinse with potable water." (See DSS/TSS 18, step 9)

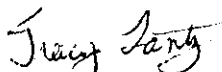

- 1. Your request to use the commonly used alternate names for an organism, specifically *Streptococcus faecalis* (ATCC 19433) and *Serratia liquefaciens* (ATCC 124460), is not acceptable. According to Subdivision H, section 101-1 p. 9, "Bacterial, fungal, and viral nomenclature used on product labels should appear in the last edition of the American Type Culture Collection (ATCC) catalogs." It is the responsibility of the manufacturers and consumers of these antimicrobial products to keep up to date with the current scientific nomenclature. However, you may list the alternate name for a micro-organism after the current designation; for example *Enterococcus faecalis* (formerly *Streptococcus faecalis* (ATCC 19433).
- 3. The submitted study, MRID No. 449813-01, is acceptable by demonstrating this product's effectiveness against *Staphylococcus aureus* VISA (CDC) HIP-5836 and *Streptococcus pneumoniae* PRSP (ATCC 51915) when used undiluted (ready-to-use solution) in the presence of 10% calf serum on thoroughly wetted hard, non-porous, inanimate surfaces for a contact time of 5 minutes.
- 4. The Confidential Statements of Formulas (CSFs) for the Basic Formulation (SOF #19647) and the Alternate Formulations SOF #'s 22729, 20919, 20920, and 20991 dated 11/15/99 are acceptable. The CSFs are in compliance with PR Notice 91-2 and in agreement with the label.

Please note: The Agency is no longer accepting the use of "commodity" as the descriptor for supplier name and address for inert ingredients. You will need to list a specific supplier in Column 11 on the Confidential Statement of Formula form or add an addendum to the form listing all the suppliers for your inert ingredient(s).

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA sec.6(e). Your release of the product for shipment constitutes acceptance of these conditions.

A stamped copy of the label is enclosed for your records. If you have any questions regarding this submission, you should contact Jacqueline Campbell at (703) 308-6416.

SPECIAL INSTRUCTIONS FOR CLEANING AND DECONTAMINATION AGAINST HIV-1 OF SURFACES/OBJECTS SOILED WITH BLOOD/BODY FLUIDS.

Personal Protection: Disposable latex or vinyl gloves, gowns, face masks, or eye coverings as appropriate, must be worn during all cleaning of body fluids, blood, and decontamination procedures.
Cleaning Procedures: Blood and body fluids must be thoroughly cleaned from surfaces and objects before application of ENVY™ LIQUID DISINFECTANT CLEANER.
Contact Time: Allow surface to remain wet for 1 minute to kill HIV-1. Allow 5 minutes to kill all other organisms cited on the label and 10 minutes for Trichophyton mentagrophytes.
Disposal of Infectious Material: Blood and other body fluids should be autoclaved and disposed of according to Federal, State, and local regulations for infectious waste disposal.
