FOR ROACH CONTROL IN SEWERS: Remove manhole cover and replace with a disc of plywood board to receive the flexible hose from the truck-mounted ventilating equipment. Pour approximately 5 ounces (1/3 of a pound) of ELIMINATOR into ventilator-blower attached to manhole of infested sewer line. Clouds of ELIMINATOR will then spread over hundreds of feet of roach-infested sewer lines. When treating sewers, one manhole per 200 feet of line should be treated. Continue application through the next two manholes beyond visible evidence of roach infestation. This treatment is highly effective for the control of American and Oriental roach infestations.

BEDBUG CONTROL: Dust ELIMINATOR into all joints, channels and hollows of bed, mattress and adjoining furniture as well as all cracks in the room should also be treated.
