## WARNING

### STATEMENT OF PRACTICAL TREATMENT

**IF SWALLOWED:** Call a physician or Poison Control Center immediately. Immediately give several glasses of water and induce vomiting by placing finger on the back of the victim's tongue. Give fluids until vomitus is clear. Do not induce vomiting or give anything by mouth to an unconscious or convulsing person.

**IF INHALED:** Remove victim to fresh air. Get medical attention if respiratory irritation occurs. Apply artificial respiration if indicated.

**IF ON THE SKIN:** In case of contact, remove contaminated clothing and immediately wash skin with soap and water. Avoid abrading the skin..

**IF IN EYES:** Flush eyes with plenty of water. Hold eyelids apart to insure rinsing of the entire surface of the eyes. Call a physician immediately.

**NOTE TO PHYSICIAN**

Chlorpyrifos is a cholinesterase inhibitor. Initial treatment measures include removal of secretions, maintenance of patient's airway and, if necessary, artificial respiration. When cyanosis is relieved, atropine may be administered in large therapeutic doses, repeated as necessary to the point of tolerance. If symptoms warrant further treatment, protopam chloride (pralidoxime chloride, 2-PAM chloride) has shown utility as adjunctive therapy. Never use morphine. Continued absorption of the poison may occur, resulting in a fatal relapse after initial improvement in condition. Close supervision of the patient is indicated for at least 48 to 72 hours.
