OCT 6 2008

Dear Ms. Boone:

Subject: Supplemental Labeling; Addition of Watercress
Slug-Fest All Weather Formula
EPA Registration No. 71096-4
Date Submitted: October 3, 2008

The supplemental labeling referred to above and submitted in connection with registration under the Federal Insecticide, Fungicide and Rodenticide Act, as amended, is acceptable. At your next label printing, or within eighteen months of the date of this letter, whichever comes first, you must incorporate this supplemental labeling into the main product labeling. A stamped copy of the label is enclosed for your records. Please submit one copy of your final printed label before you release the product for shipment. If you have any questions regarding this letter, please contact me at 703 306-0415.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Kable Bo Davis".

Enclosure- stamped supplemental labeling

SUPPLEMENTAL LABELING

SLUG-FEST ALL WEATHER FORMULA EPA REG NO. 71096-4

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

The labeling must be in possession of the user at the time of application. Read the label affixed to the container for Slug-Fest All Weather Formula before applying. Use of Slug Fest All Weather Formula according to this labeling is subject to the use precautions and limitations imposed by the label affixed to the container for Slug-Fest All Weather Formula.

WATERCRESS

LABEL RESTRICTIONS FOR APPLICATION OF SLUG-FEST ON WATERCRESS

USE RESTRICTIONS

1. Do not make more than two applications per harvested crop.
2. The first application cannot be made within two weeks following planting a new crop or one week following the harvest and start of a return crop. The second application can be made no closer than three days to harvest.
3. Application rate: 118 fl. oz. per acre (2 lbs. a.i. per acre).
4. A maximum of 4 applications per year can be made to a field.

PRE-HARVEST INTERVAL: 3 days.

USE DIRECTIONS

1. Slug-Fest should be applied to the crop canopy.
2. For optimum efficiency, apply Slug-Fest in the morning while dew is still on the plants and snails are visible on the plants.
3. Fields to be treated with Slug-Fest must be drained for a period minimum of 24 hours prior to treatment and must remain drained for 24 hours following the treatment.
4. Watering restrictions: At the resumption of the flow-through irrigation cycle, the first hour effluent from the treated beds must be held or re-circulated on site for five days or longer.
5. The average depth of water in the watercress beds should be between 1 to 1.5 inches while watercress is in production.
6. Make applications by ground sprayer equipment with a minimum of 50 gallons of water per acre. Applications can also be made through chemigation system. When chemigation is used, follow the directions for chemigation system.

CHEMIGATION USE INSTRUCTIONS

Apply Slug-Fest only through solid set irrigation system. Do not apply this product through any other type of irrigation system. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialist. Do not connect an irrigation system used for pesticide application to a public water system.

Operating Instructions:

1. The irrigation system must contain a functional check-valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back towards the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. System must use a metering pump effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
6. Do not apply when wind speed favors drift beyond the area to be treated.
7. Part circle sprinklers should be installed at the periphery of the fields to prevent an off-target application.
8. Slug-Fest must be applied on the schedule specified in the specific crop use recommendations, and not according to the irrigation schedule.
9. Do not inject Slug-Fest at full strength. Dilute in adequate amount of water prior to injecting in the irrigation system for chemigation.
