Results of the for shipment: istillates" from under the ed advice, replace "Do vater if able to swallow.".

e. In the Hazards to Humans and Domestic Animals text, replace "Causes substantial but temporary eye injury." with "Causes moderate eye irritation.". Also, revise "Do not get in eyes, on skin, or clothing." with "Avoid contact with skin, eyes, or clothing.".

f. Since this an aqueous based product, delete the heading "Physical and Chemical Hazards" and the associated text.

Submit three copies of the revised final printed label for the record.

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA sec. 6(e). Your release for shipment of the product constitutes acceptance of these conditions.

A stamped copy of the label is enclosed for your records.

#### RESTRICTED USE PESTICIDE Due to Toxicity to Fish and Aquatic Organisms

For retail sale to and use only to Certified Applicators, or persons under their direct supervision, and only for those uses covered by the Certified Applicator's certification.

# LAMBDASTAR 1 CS Insecticide

For the Control of a Variety of Insect Pests on Selected Crops

Contains the same active ingredient as Karate® Insecticide.

Active Ingredient:	•
Lambda-cyhalothrin	
Inert Ingredients:	
Total	100.00%

Contains petroleum distillates.

Contains 1 lb. of active ingredient per gallon.

LambdaStar 1 CS is an emulsifiable concentrate.

#### KEEP OUT OF REACH OF CHILDREN WARNING/AVISO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

EPA Reg. No. 71532-XX

EPA Est. No. 5905-AR-01 5905-GA-01 5905-IA-01 44616-MO-01

#### ACCEPTED with COMMENTS In RPA Letter Dated

In EPA Letter Dated:

JUN 2 0 2008 Under the Federal Insecticide, Fragsteide, and Rodenticide Act, as amended, for the pesticide registered under EPA Reg. No. Net Contents: Gallons

Manufactured By: LG Life Sciences, Ltd. Seoul, Korea

4/31

· · ·	FIRST AID						
If swallowed	• Call a poison control center or doctor immediately for treatment advice.						
	• Do not give any liquid to the person.						
۰.	• Do not induce vomiting unless told to do so by the poison control center or						
	doctor.						
	• Do not give anything by mouth to an unconscious person.						
If in eyes	• Hold eye open and rinse slowly and gently with water 15-20 minutes.						
	• Remove contact lenses, if present, after the first 5 minutes, then continuing						
	rinsing eye.						
	• Call a poison control center or doctor for treatment advice.						
If on skin or clothing	Take off contaminated clothing.						
	• Rinse skin immediately with plenty of water for 15-20 minutes.						
· · ·	Call a poison control center or doctor for treatment advice.						
If inhaled	Move person to fresh air.						
	• If person is not breathing, call 911 or an ambulance, then give artificial						
	respiration, preferably by mouth-to-mouth if possible.						
	• Call a poison control center or doctor for further treatment advice.						
Have the product contain	iner or label with you when calling a poison control center or doctor, or going for						
treatment. You may als	o call 1-800-222-1222 for emergency medical treatment information.						
Note to Physician - Co	ntains petroleum distillate – vomiting may cause aspiration pneumonia.						

#### **PRECAUTIONARY STATEMENTS**

#### Hazards to Humans and Domestic Animals

#### WARNING

May be fatal if swallowed. Causes substantial but temporary eye injury. Harmful if absorbed through skin or inhaled. Avoid breathing vapor or spray mist. Do not get in eyes, on skin, or clothing. Wear appropriate protective clothing and eyewear as specified in the Personal Protective Equipment (PPE) section of this label. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. Remove and wash contaminated clothing before reuse.

Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals. Skin exposure may also result in a sensation described as a tingling, itching, burning, or prickly feeling. Onset may occur immediately to 4 hours after exposure and may last 2 to 30 hours, without damage. Wash exposed areas once with soap and water. Relief from the skin sensation may be obtained by applying an oil-based cream.

#### **Personal Protective Equipment (PPE)**

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category G on an EPA chemical resistant category selection chart.

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves, such as barrier laminate or viton ≥14 mils
- Shoes plus socks
- Protective eyewear

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this

product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

#### User Safety Recommendations

#### Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

#### **Environmental Hazards**

This pesticide is extremely toxic to fish and aquatic organisms and toxic to wildlife. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift from treated areas. Drift and runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwaters.

This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds if bees are visiting the treatment area.

#### **Physical and Chemical Hazards**

Combustible liquid. Do not use or store near heat or open flame.

#### **DIRECTIONS FOR USE**

#### **Restricted Use Pesticide**

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

This labeling must be in the possession of the user at the time of application.

#### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

# Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls
- Chemical-resistant gloves, such as barrier laminate or viton  $\geq 14$  mils
- Shoes plus socks

• Protective eyewear

#### GENERAL INFORMATION

Apply in sufficient water for thorough coverage of listed crops unless otherwise specifically noted. Rate of application should be based upon pest pressure, timing of sprays and field scouting. Use higher rate under heavy pest pressure and lower rates under low to moderate pest pressure. For ground and air applications, unless otherwise noted, the following spray volumes are recommended:

**Row Crops:** By ground, apply in a minimum of 10 gallons of finished spray per acre. By air, apply in a minimum of 2 gallons of finished spray per acre.

**Orchard and Vine Crops:** By ground, apply in a minimum of 50 gallons of finished spray per acre. By air, apply in a minimum of 10 gallons of finished spray per acre.

For cutworm control, LambdaStar 1 CS may be applied before, during or after planting. For soil incorporated applications, use higher rates for improved control.

#### Resistance

Some insects are known to develop resistance to products used repeatedly for control. Because the development of resistance cannot be predicted, the use of this product should conform to resistance management strategies established for the use area. Consult your local or state agricultural authorities for details.

If resistance to this product develops in your area, this product, or other products with a similar mode of action, may not provide adequate control. If poor performance cannot be attributed to improper application or extreme weather conditions, a resistant strain of insect may be present. If you experience difficulty with control and resistance is a reasonable cause, immediately consult your local company representative or agricultural advisor for the best alternative method of control for your area.

#### **Spray Drift Precautions**

OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF

4

#### AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS, ESTUARIES AND COMMERCIAL FISH FARM PONDS.

• Do not apply by ground within 25 feet, or by air within 150 feet of lakes; reservoirs; rivers; permanent streams, marshes, pot holes, or natural ponds; estuaries and commercial fish farm ponds. increase the buffer zone to 450 feet when ultra low volume (ULV) application is made.

• All aerial and ground application equipment must be properly maintained and calibrated using appropriate carriers.

• For aerial applications, the spray boom should be mounted on the aircraft so as to minimize drift caused by wing tip vortices. The minimum practical boom length should be used and must not exceed 75% of wing span or rotor diameter.

• Use the largest droplet size consistent with good pest control. Formation of very small droplets may be minimized by appropriate nozzle selection, by orienting

nozzles away from the air stream as much as possible, and by avoiding excessive spray boom pressure.

• Spray should be released at the lowest height consistent with pest control and flight safety.

Applications more than 10 feet above the crop canopy should be avoided.

• Make aerial or ground applications when the wind velocity favors on-target product deposition (approximately 3 to 10 mph). Do not apply when wind velocity exceeds 15 mph. Avoid applications when wind gusts approach 15 mph.

• Risk of exposure to aquatic areas can be reduced by avoiding applications when wind direction is toward the aquatic area.

• Do not cultivate within 10 feet of the aquatic area so as to allow growth of a vegetative filter strip.

• Low humidity and high temperatures increase the evaporation rate of spray droplets and therefore the likelihood of increased spray drift to aquatic areas. Avoid spraying during conditions of low humidity and/or high temperature.

• Do not make aerial or ground applications during temperature inversions. Inversions are characterized by stable air and increasing temperatures with height above the ground. Mist or fog may indicate the presence of an inversion in humid areas. The applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

• In the State of New York, a 25 foot vegetated, non-cropped buffer strip untraversed by drainage tiles must be maintained between a treated field and a coastal salt marsh or stream that drains into a coastal salt marsh, for both aerial or ground application. For aerial applications, the 25 foot vegetated non-cropped buffer strip for runoff protection would be part of the larger 150 foot buffer strip (or 450 foot buffer strip for ULV application) required for spray drift.

#### TANK MIX APPLICATION

Fill the spray tank at least one-third full of clean water or diluent. With the pump and agitator running continuously, add the recommended amount of each product in the tank mix to the spray tank and allow to fully disperse, adding LambdaStar 1 CS last. Add the remainder of water or diluent to the spray tank. Follow the precautions and limitations of the most restricted product in the tank mixture.

**Compatibility testing for tank mixing partners:** Test compatibility of the intended tank mixture by adding proportionate amounts of each ingredient to a pint or quart jar, cap, shake, and let set 15 minutes. Formation of precipitates that do not readily redisperse indicates an incompatible mixture that should not be used.

LambdaStar 1 CS is an aqueous based formulation. It is recommended that no type of non-emulsifiable oils be used in combination with LambdaStar 1 CS. If adjuvants are used, use only:

- Nonionic Surfactant (NIS) containing at least 75% surface agent, or
- Non-phytotoxic Crop Oil Concentrate (COC) including once refined Vegetable Oil concentrate (VOC), or

5

• Methylated Seed Oils (MSO) containing a minimum of 17% emulsifier.

Adjuvants other than NIS or COC may be used providing the product meets the following criteria:

- 1. Contains only EPA exempt ingredients.
- 2. Is non-phytotoxic to the target crop.
- 3. Is compatible in mixture (may be established through a jar test).
- 4. Is supported locally for use with LambdaStar 1 CS on the target crop through proven field trials and through university and extension recommendations.
- trials and through university and extension recommendation

In addition, the following may be used as diluents:

Crop Oil Concentrate Methylated

Seed Oils

Urea-Ammonium Nitrate

It is recommended that the following not be used in combination with LambdaStar 1 CS as diluents or adjuvants:

Non-emulsifiable Oils Diesel Fuel Straight Mineral Oil

#### CHEMIGATION

#### Sprinkler Irrigation Application

Apply LambdaStar 1 CS at rates and timing described elsewhere in this label. Consult your local State Extension Service or other local experts for recommendations pertinent for your area.

Thorough coverage of foliage is required for good control. Good agitation in the pesticide supply tank should be maintained prior to and during the entire application period.

Apply by injecting the recommended rate of LambdaStar 1 CS into the irrigation system using a metering device that will introduce a constant flow and by distributing the product to the target area in 0.1-0.2 acre-inch of water. In general, use the least amount of water required for proper distribution and coverage. It is recommended that the product be injected into the main irrigation line ahead of a right angle turn in the line to insure adequate dispersion or mixing in the irrigation water. Once the application is completed, flush the entire irrigation and injection system with clean water before stopping the system.

In addition to the above recommendations, if application is being made during a normal irrigation set of a stationary sprinkler, the recommended rate of LambdaStar 1 CS for the area covered should be injected into the system only during the end of the irrigation set for sufficient time to provide adequate coverage and product distribution.

It is not recommended that LambdaStar 1 CS be applied through an irrigation system connected to a public water system. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves and average of at least 25 individuals daily at least 60 days out of the year

#### **Use Precautions - Sprinkler Irrigation Application**

A. Apply this product only through (sprinkler including center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, or hand move) irrigation system(s). Do not apply this product through any other type of irrigation system.

9/31

B. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from nonuniform distribution of treated water.

C. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

D. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

E. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

F. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.

G. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

H. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

I. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

J. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

K. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

L. Do not apply when wind speed favors drift beyond the area intended for treatment or non-uniform distribution of treated water.

7

M. Do not apply through chemigation systems connected to public water systems.

### SPECIFIC USE DIRECTIONS - AGRICULTURAL USES

10/31

#### ALAFAFA AND ALFALFA GROWN FOR SEED

	Rate		
Target Pests	lb. a.i/A	fl. oz./A	Remarks
Alfalfa Caterpillar	0.015-0.025	1.92 - 3.20	Apply only to fields planted to pure stands of
Army cutworm			alfalfa.
Cutworm spp.			
Green Cloverworm			Apply as required by scouting Timing and
L esthonner species			frequency of applications should be based upon
Leanopper species			inequency of applications should be based upon
Therease and Alfalfa Hanner			msect populations reaching locally determined
Infectorhered Affalia Hopper			economic infesnolas.
Velvetbean Caterpillar			
Webworm spp.			Ground application: Apply in a minimum of
Alfalfa Seed Chalcid (Adult)	0.02-0.03	256 384	10 gallons per acre using sufficient spray volume
Alfalfa Weevil	0.02-0.05	2.30 - 3.84	to obtain full coverage of foliage or target areas.
Armyworm			
Bean Leaf Beetle (Adult)		l	Air application: Apply in a minimum of 2
Blister Beetle spp			gallons per acre using sufficient spray volume to
Blue Alfalfa Anhid			obtain full coverage of foliage or target areas
Clover Leaf Weevil spp			obtain fair coverage of fondge of anget areas.
Clover Root Borer (Adult)			When foliogo is dense and/or pact populations
Clover Root Curculio spp. (Adult)			when tonage is dense and/or pest populations
Clover Stem Borer (Adult)			are high 5-10 gallons per acre by air or 20
Com Earworm			gallons per acre by ground and higher use rates
Cowpea Aphid			are recommended. Use higher rates for increased
Cowpea Curculio (Adult)			residual control.
Cowpea Weevil (Adult)			
Cucumber Beetle Spp. (Adult)			Avoid application when bees are actively
Egyptian Alfalfa Weevil			foraging by applying during the early morning or
Fall Armyworm <sup>1</sup>			during the evening hours. Be aware of bee hazard
Grape Colaspis (Adult)			resulting from a cool evening and/or morning
Grasshopper spp.		•	dev. It may be advisable to remove bee shelters
Green June Beetle (Adult)			during and for 2.2 days following application
Green Peach Aphid <sup>3</sup>			during and for 2-5 days following application.
Japanese Beetle (Adult)			Avoid direct application to bee shelters.
Meadow Spittlebug			
Mexican Bean Beetle			<sup>1</sup> For control of first and second instar only.
Pea Aphid			<sup>2</sup> Suppression only.
Pea Weevil (Adult)			<sup>3</sup> See resistance statement under GENERAL
Plant Bug spp. including Lygus spp. <sup>3</sup>			INFORMATION.
Spotted Alfalfa Aphid			<sup>4</sup> Does not include Western Flower Thrips.

Yellow-striped Armyworm		······································

#### **REMARKS:**

Apply as required by scouting. Timing and frequency of application should be based upon insect populations reaching locally determined economic thresholds. Determine the need for repeat applications, usually at intervals of 5-7 days, by scouting.

**Ground application:** Apply in a minimum of 10 gallons per acre using sufficient spray volume to obtain full coverage of foliage or target areas.

Air application: Apply in a minimum of 2 gallons per acre using sufficient spray volume to obtain full coverage of foliage or target areas. In addition, adding an emulsifiable crop oil (e.g., 1 pt./A) when lower aerial application volumes are used is recommended to help improve coverage, reduce evaporation, and improve efficacy.

LambdaStar 1 CS can be safely used when propanil products are being used for weed control.

**Rice water weevil in dry seeded rice**: Make a foliar application as indicated by scouting for the presence of adults and/or feeding scars, usually within a time frame of 0-5 days after permanent flood establishment. Do not exceed 10 days from starting permanent flood until insecticide application unless scouting indicates weevils have not been previously present. Adults may also be treated at later stages of rice development to reduce overwintering populations.

**Rice water weevil in water seeded rice:** Make the first foliar application after pinpoint flood as indicated by scouting for the presence of adults and/or feeding scars usually when rice has emerged 0.5 inch above the waterline. Under conditions of prolonged migration into the field, start field scouting for rice water weevil adults and/or feeding scars 3-5 days after the initial treatment and, if needed, apply a second application within 7-10 days of the first application. Adults may also be treated at later stages of rice development to reduce overwintering populations.

**California:** In addition to above directions, for control of rice water weevil in water seeded rice, LambdaStar 1 CS may be applied at the 1- to 3-leaf growth stage with the majority at the 2- leaf growth stage.

Adults are vulnerable on levees and in the water. Larvae are vulnerable while feeding on the leaf prior to entering the soil. Monitor for adults, based upon field history and density of population. Monitor field edges and levee areas for adults. Treat in the following manner: (a) spray the inside perimeter of the field, or (b) spray the entire field.

Greenbug is known to have many biotypes. LambdaStar 1 CS may only provide suppression. If satisfactory control is not achieved with the first application of LambdaStar 1 CS, a resistant biotype may be present. Use alternate chemistry for control.

Stem borers: Scout fields when rice growth is near panicle differentiation, for early symptoms of damaging populations exhibited as discoloration (orange-tan) around the junction of the leaf sheath and leaf blade which is caused by feeding of young larvae within the sheath. Applications must be made before larvae bore into rice stems. Make the first application at panicle differentiation to 2 inch panicle for partial control. Make the second application at boot to heading for maximum control. All rice varieties are susceptible to stem borer damage, but Cocodrie and Priscilla are particularly susceptible.

• Do not release floodwater within 7 days of an application.

• Do not apply more than 0.12 lb. a.i. (0.96 pt.)/A per season.

• Do not apply more than 0.04 lb. a.i. (0.32 pt.)/A within 21 to 27 days of harvest.

• Do not apply within 21 days of harvest.

• Do not use treated rice fields for the aquaculture of edible fish and crustacea.

• Do not apply as an ultra-low volume (ULV) spray.

<sup>1</sup> For control before the larvae bores into the plant stalk.

#### Remarks:

Apply as required by scouting, usually at intervals of 5 or more days. Timing and frequency of applications should be based upon insect populations reaching locally determined economic thresholds.

**Ground application:** Apply in a minimum of 10 gallons per acre using sufficient spray volume to obtain full coverage of foliage or target areas.

Air application: Apply in a minimum of 2 gallons per acre using sufficient spray volume to obtain full coverage of foliage or target areas.

• For edible podded and succulent shelled legume vegetables, do not apply within 7 days of harvest.

• For dried shelled legume vegetables, do not apply within 21 days of harvest.

• Do not apply more than 0.12 lb. a.i. (0.96 pt.)/A per season.

• For succulent and dried shelled peas and beans, do not graze livestock in treated areas or harvest vines for forage or hay.

<sup>1</sup>For control of the first and second instar only.

<sup>2</sup>Use higher rates for large larvae.

<sup>3</sup>For suppression only.

<sup>4</sup>See resistance statement under GENERAL INFORMATION. <sup>5</sup>Does not include Western Flower Thrips.

#### STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage and disposal.

**Pesticide Storage:** Store in original containers only. Keep container closed when not in use. Do not store near food or feed. In case of spill or leak on floor or paved surfaces, soak up with sand, earth, or synthetic absorbent. Remove to chemical waste area.

**Pesticide Disposal:** Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental

Control Agency, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

**Container Disposal:** Triple rinse (or equivalent): then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

For Bulk, Mini-Bulk, EZ Handler® and Boomerang Container Disposal

Return container to point of purchase for reuse with seal intact and in salable condition. Container Precautions

Before refilling RETURNABLE CONTAINERS, inspect thoroughly for damage such as

cracks, punctures, bulges, dents, abrasions, and damaged or worn threads on closure devices. Container Precautions

Before refilling RETURNABLE CONTAINERS, inspect thoroughly for damage such as

cracks, punctures, bulges, dents, abrasions, and damaged or worn threads on closure devices. **Refill Only With LambdaStar 1 CS.** The contents of RETURNABLE CONTAINERS cannot be completely removed by cleaning. Refilling with materials other than LambdaStar 1 CS will result in contamination and may weaken container.

After filling and before transporting, check for leaks.

Do not refill or transport damaged or leaking container.

CONTAINER IS NOT SAFE FOR FOOD, FEED, OR DRINKING WATER!

#### CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

**NOTICE:** Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of LG LIFE SCIENCES, LTD., Inc. or Seller. To the extent consistent with applicable law all such risks shall be assumed by Buyer and User, and Buyer and User agree to hold LG LIFE SCIENCES, LTD. and Seller harmless for any claims relating to such factors.

LG LIFE SCIENCES, LTD. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of the product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or LG LIFE SCIENCES, LTD., and Buyer and User assume the risk of any such use. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW LG LIFE SCIENCES, LTD. MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

To the extent consistent with applicable law in no event shall LG LIFE SCIENCES, LTD. or Seller be liable for any incidental, consequential or special damages resulting from the use or handling of this product. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF LG LIFE SCIENCES, LTD. AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF LG LIFE SCIENCES, LTD. OR SELLER, THE REPLACEMENT OF THE PRODUCT.

LG LIFE SCIENCES, LTD. and Seller offer this product, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitation of Warranty and Liability, which may not be modified except by written agreement signed by a duly authorized representative of LG LIFE SCIENCES, LTD.
