#### PREPARATION AND APPLICATION

Wood should be clean, dry, well seasoned and free of bark. When using Genics Gel Wrap as a groundline treatment excavate around wood to allow top of wrap to extend 2" (5cm) above groundline.

Wire brush area 3" (7.5cm) above groundline and approximately 18" (50cm) below groundline removing dirt and decayed material.

Cut off sufficient length of Genics Gel Wrap leaving 2" - 6" (5cm - 15cm) of wrap to serve as overlap. Cut open pouches by slicing diagonal lines every 2 to 4 inches through the inner plastic layer, exposing the gel. On the overlap portion leave a sufficient tail attached to the outermost edge forcing preservative to move back into wood zone for penetration.

Wrap proper length Genics Gel Wrap around the pole with exposed gel against the pole and staple or tack firmly in place. Staple short side of the backing first and overwrap with longer edge. Allow wrap to extend 2" (5cm) above groundline.

Backfill excavation, tamping firmly.
