NOTIFICATION OF TYPOGRAPHICAL ERROR

PER PR NOTICE 98-10

Nichino America, Inc. Applaud® 70 WP Insect Growth Regulator

(EPA Reg. No. 71711-15)

“This notification is consistent with the provisions of PR Notice 98-10 and EPA regulations at 40 CFR 152.46, and no other changes have been made to the labeling or the confidential statement of formula of this product. I understand that it is a violation of 18 U.S.C. Sec. 1001 to willfully make any false statement to the EPA. I further understand that if this notification is not consistent with the terms of PR Notice 98-10 and 40 CFR 152.46, this product may be in violation of FIFRA and I may be subject to enforcement action and penalties under sections 12 and 14 of FIFRA.”

SUPPLEMENTAL LABEL

APPLAUD® 70WP Insect Growth Regulator
For Use on Almonds, Pistachios, Peaches and Pome Fruit (apples, crabapple, loquat, mayhaw, oriental pears, pears, and quince)

[Marketing Brand: Centaur™ insect growth regulator]

EPA Reg. No. 71711-15

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This supplemental labeling must be in the possession of the user at the time of application.

New crops appear on this supplemental labeling that do not appear on the Section 3 container label.

NOTICE: Before using this product, read the First Aid, Precautionary Statements, Conditions of Sale and Warranty, and complete Directions for Use found on the container labeling.

GENERAL INFORMATION

APPLAUD® 70WP Insect Growth Regulator contains the active ingredient, buprofezin. It is effective against the nymph stages of scales and immature stages of other molting insects by inhibiting chitin biosynthesis. Buprofezin also suppresses oviposition of adults and reduces viability of eggs. Treated susceptible pests may remain alive on the plant for 3-7 days, but feeding damage during this time is typically very low. APPLAUD 70WP is not disruptive to beneficial insects and mites.

Good coverage is essential. Apply by ground in sufficient water volume. Orient nozzles to assure good coverage. Use of higher volume of water will assure better coverage, especially under adverse conditions such as hot, dry weather, and/or a dense canopy.

Apply when economic infestations occur based on local information.

INSECTS CONTROLLED

Scales, leafhoppers, and pear psylla

RESISTANCE MANAGEMENT

APPLAUD 70WP belongs to a class of chemicals not previously used as pesticides and not known to be cross-resistant to other classes of insecticides. However, insect pests are known to develop resistance to products used repeatedly. Because resistance development cannot be predicted, the use of this product should conform to resistance management strategies established for the crop and use area. Such strategies may include rotating with insecticides with different modes of action. Consult your local pest control advisor or extension office for details. If resistance to this product develops in your area, it may not provide adequate control. If you experience difficulty with control, and resistance is a likely cause, consult your local state university horticultural specialist or local agricultural authorities for the best alternative method of control. To preserve the usefulness of APPLAUD 70WP, do not make consecutive applications. Prior to subsequent applications, use an alternative chemistry with a different mode of action. If a different crop in an adjacent field has been treated with buprofezin against silverleaf whitefly within the past 28 days, do not apply APPLAUD 70WP as the first silverleaf whitefly application. Always consult your local crop advisor for the most appropriate control decision for your area. Resistance management strategies advise against applying rates lower than those recommended on the label.
