OFFICE OF CHEMICAL SAFETY AND POLLUTION PREVENTION

June 27, 2016

Gordon Sargent
Project Registration Manager
BASF Corporation
26 Davis Drive
Research Triangle Drive, NC 27709

Subject: Non-PRIA (Pesticide Registration Improvement Act) Labeling Amendment – to clarify

status of product use on certain crops in California and add OMRI to label.

Product Name: Serifel®

EPA Registration Number: 71840-18 Application Date: June 30, 2015 OPP Decision Number: 507588

Dear Mr. Sargent:

The amended labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended, is acceptable.

This approval does not affect any terms or conditions that were previously imposed on this registration. You continue to be subject to existing terms or conditions on your registration and any deadlines connected with them.

A stamped copy of your labeling is enclosed for your records. This labeling supersedes all previously accepted labeling. You must submit one (1) copy of the final printed labeling before you release this product for shipment with the new labeling. In accordance with 40 CFR § 152.130(c), you may distribute or sell this product under the previously approved labeling for 18 months from the date of this letter. After 18 months, you may only distribute or sell this product if it bears this new revised labeling or subsequently approved labeling. "To distribute or sell" is defined under FIFRA section 2(gg) and its implementing regulation at 40 CFR § 152.3.

Should you wish to add/retain a reference to your company's website on your label, then please be aware that the website becomes labeling under FIFRA and is subject to review by the U.S. Environmental Protection Agency (EPA). If the website is false or misleading, the product will be considered to be misbranded and sale or distribution of the product is unlawful under FIFRA section 12(a)(1)(E). 40 CFR § 156.10(a)(5) lists examples of statements the EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product's label, claims made on the website may not substantially differ from those claims approved through the registration

Page 2 of 2 EPA Reg. No. 71840-18 OPP Decision No. 507588

process. Therefore, should the EPA find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA-approved registration, the website will be referred to the EPA's Office of Enforcement and Compliance Assurance.

Your release for shipment of this product constitutes acceptance of these terms. If these terms are not complied with, this registration will be subject to cancellation in accordance with FIFRA section 6.

If you have any questions, please contact Ann Sibold of my team by phone at (703) 305-6502 or via email at sibold.ann@epa.gov.

Sincerely,

Alan Reynolds, Team Leader Microbial Pesticides Branch Biopesticides and Pollution Prevention Division (7511P) Office of Pesticide Programs

Serife Biofungicide

ACCEPTED

06/27/2016

Under the Federal Insecticide, Fungicide and Rodenticide Act as amended, for the pesticide registered under EPA Reg. No.

71840-18

Serifel is an agricultural biofungicide product for suppression of plant diseases in listed crops.

For Organic Use

Active Ingredient:

Bacillus amyloliquefaciens strain MBI 600*†	9.9%
Other Ingredients:	90.1%
Total:	100.0%

^{*}Serifel Biofungicide contains a minimum of 5.5 x 10¹⁰ viable spores per gram.

EPA Reg. No. 71840-18

EPA Est. No.

KEEP OUT OF REACH OF CHILDREN CAUTION/PRECAUCION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

See inside for complete First Aid, Precautionary Statements, Directions For Use, Conditions of Sale and Warranty, and state-specific crop and/or use site restrictions.

In case of an emergency endangering life or property involving this product, call day or night 1-800-832-HELP (4357).

Batch Code: (Printed on Bottle) **Net Weight:**

BASF Corporation

26 Davis Drive, Research Triangle Park, NC 27709

[†]Formerly named Bacillus subtilis strain MBI 600

FIRST AID Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. If in eyes Call a poison control center or doctor for treatment advice.

HOTLINE NUMBER

Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact BASF Corporation for emergency medical treatment information: 1-800-832-HELP (4357).

Precautionary Statements

Hazards to Humans and Domestic Animals

CAUTION. Causes moderate eve irritation. Avoid contact with eyes or clothing. Wear protective eyewear. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

Personal Protective Equipment (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Shoes plus socks
- A NIOSH approved particulate respirator with any N, R, or P filter with NIOSH approval number prefix TC-84A; or a NIOSH approved powered air purifying respirator with an HE filter with NIOSH approval number prefix TC-21C. (Repeated exposure to high concentrations of microbial proteins can cause allergic sensitization.)

Follow the manufacturer's instructions for cleaning and maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

Usersshould:

- · Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. As soon as possible, wash thoroughly and change into clean clothing.

Environmental Hazards

For terrestrial uses: Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash water or rinsate.

In Case of Emergency

In case of large-scale spill of this product, call:

 CHEMTREC 1-800-424-9300 BASF Corporation 1-800-832-HELP (4357)

In case of medical emergency regarding this product, call:

- Your local doctor for immediate treatment
- Your local poison control center (hospital)
- BASF Corporation 1-800-832-HELP (4357)

Directions For Use

It is a violation of federal law to use this product in a manner inconsistent with its labeling. DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the state or tribal agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), notification to workers, and restrictedentry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

DO NOT enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 hours.

Exception: if the product is soil-injected or soil incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls
- Chemical resistant gloves (made of any waterproof material)
- Shoes plus socks

STORAGE AND DISPOSAL

DO NOT contaminate water, food, or feed by storage or disposal.

Pesticide Storage

Store in a cool, dry place until used. **DO NOT** store this product near food, feed, seed, fertilizers, or other pesticides.

Pesticide Disposal

To avoid wastes, use all material in this container by application according to label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local governments or by industry)

Container Handling

Nonrefillable Container. DO NOT reuse or refill this container. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration. Do not burn, unless allowed by state and local ordinances.

Product Information

This package contains Serifel® Biofungicide, a wettable powder (WP). The active ingredient in Serifel is Bacillus amyloliquefaciens strain MBI600, a biological agent providing suppression of listed foliar and soilborne plant diseases. Apply Serifel preventively in low to medium disease pressure situations. Serifel can be applied as a foliar spray, a directed or banded spray, a soil or plant drench, as an in-furrow application, or through chemigation. Serifel can be applied alone or in a tank mix with other registered pest control products, unless otherwise noted in the Crop-Specific Directions. Apply Serifel in a regularly scheduled protective spray program and use in a rotation program with other fungicides. Under higher disease pressure situations, tank mix Serifel with registered fungicide products.

Label statement required by the State of Oregon

Information regarding the contents and levels of metals in this product is available on the Internet at http://www.aapfco.org/metals.htm.

Integrated Pest Management

Serifel can be integrated into an overall disease and pest management program. Follow cultural practices known to reduce disease development. Consult your local extension specialist, certified crop advisor and/or BASF representative for additional IPM strategies established for your area. Serifel may be used in agricultural extension advisory (disease forecasting) programs, which recommend application timing based on environmental factors favorable for disease development.

Application Instructions

Apply rates of **Serifel** as instructed by the **Crop-Specific Directions**. Apply **Serifel** with ground equipment, aerial equipment or through sprinkler irrigation equipment. Equipment must be checked frequently for calibration. If heavy rainfall or irrigation occurs shortly after application, reapplication of **Serifel** may be necessary.

Under low-level disease conditions, the minimum application rates can be used while maximum application rates and shortened spray schedules are to be used for severe or threatening disease conditions. Tank mixing **Serifel** with other fungicides can also improve performance.

Cleaning Spray Equipment

Spraying equipment must be cleaned thoroughly before and after applying this product, particularly if a product with potential to injure crops was used prior to **Serifel**.

Consult BASF Representatives for additional information regarding a gitation and recirculation.

Foliar Ground Applications

Apply **Serifel** in sufficient water to ensure thorough coverage of foliage, bloom, and fruit. Thorough coverage is required. Complete coverage of the stem, all the way down to the soil, is required for suppression of soilborne diseases of the stem.

Maintain agitation of product during the application process. Apply the product mixture shortly after mixing. **DO NOT** store mixed slurries of **Serifel** overnight.

In-Furrow, Shanked-In, Injected or Soil Drench Applications

Apply **Serifel** as a water-based suspension alone or with other labeled in-furrow or soil drench products (fungicides, insecticides, nematicides, fertilizers, etc.) via standard agricultural application machinery. Prior to

mixing, determine physical compatibility by mixing proportional quantities of the products in water as described in the **Compatibility Test for Tank Mix Components** section of this label. Maintain agitation of product during the application process. Apply the product mixture shortly after mixing. **DO NOT** store mixed slurries of **Serifel® Biofungicide** overnight.

For in-furrow, shanked-in, injected, or soil drench applications, mix 4-16 ounces by weight of Serifel with a water volume appropriate for the crop and application type. Use higher rates and consider mixing with another fungicide when conditions favor heavy disease development.

For soil drench applications at planting for seeding or transplants, apply a spray mixture of Serifel with adequate water volume to thoroughly drench through the root zone.

For shanked-in and injected applications, the use of **Serifel** can be prior to planting, at planting or after planting of seed or transplants.

For in-furrow applications, apply **Serifel** as an in-furrow spray using the appropriate amount of water for the specific crop. Making a pre-slurry suspension of **Serifel** may help disperse **Serifel** and improve equipment compatibility at lower application volumes.

Instructions for In-Furrow, Shanked-In, Injected or Soil Drench Applications of Serifel® Biofungicide										
Rate Per 1000 row	Serifel Rate (oz/A)									
feet										
(oz	12-inch	15-inch	20-inch	22-inch	30-inch	32-inch	34-inch	36-inch	38-inch	40-
product)	rows	inch								
										rows

1.0	See footnote ¹	15.4	14.5	13.7	13.1					
1.1	See footnote ¹	16.0	15.1	14.4						
1.2	See footnote ¹	15.7								

Application Directions. Use 0.3 to 1.2 oz of **Serifel** per 1000 feet of row. Refer to this chart to determine the rate per acre. Apply at planting as an in-furrow application by directing the spray into the furrow before seed is covered.

DO NOT apply more than 16 oz (1 lb) per acre of Serifel.

¹For 36 to 38 inch rows, use a maximum of 1.1 oz per 1000 row feet.

For 34 inch rows, use a maximum of 1.0 oz per 1000 row feet.

For 30 to 32 inch rows, use a maximum of 0.9 oz per 1000 row feet.

For 20 to 22 inch rows, use a maximum of 0.6 oz per 1000 row feet.

For 15 inch rows, use a maximum of 0.4 oz per 1000 row feet.

For 12 inch rows, use a maximum of 0.3 oz per 1000 row feet.

Instructions for Directed or Banded Sprays Related to Ground Applications

The application rates shown in the **Crop-specific Directions** on this label reflect the amount of product to be applied uniformly over an acre of ground on a broadcast basis. In some crops, **Serifel® Biofungicide** may be used as a directed or banded spray over the rows or plant beds with the alleys or row middles left unsprayed. For such uses, reduce the labeled **Serifel** rates in proportion to the area actually sprayed. This adjustment is necessary to avoid applying the product at use rates higher than permitted according to label directions. The following formula may be used to determine the broadcast equivalent rate for doing directed or banded sprays:

sprayed bed width + unsprayed row middle width = total row width

Example: A directed spray application will be made to 45-inch plant beds that are separated by 15-inch unsprayed row middles.

45 inches sprayed bed width + 15 inches unsprayed row middles = 60 inches total row width

The calculation to determine the appropriate equivalent rate of product to use for this situation based on a label broadcast rate recommendation of 4 ounces/acre follows:

Directions for Use through Sprinkler Chemigation Systems

Sprayer Preparation

Clean chemical tank and injector system thoroughly. Flush system with clean water.

Application Instructions

Apply **Serifel** at rates and timings as described in this label.

Use Precautions for Sprinkler Irrigation Applications

 Apply this product only through a sprinkler including center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, or hand move irrigation

- systems. **DO NOT** apply this product through any other type of irrigation system(s).
- Add Serifel to the pesticide supply tank under agitation containing sufficient water to maintain a continuous flow by the injection equipment. In continuous moving systems, inject this product-water mixture continuously, applying the labeled rate per acre for that crop.

DO NOT exceed 1/2 inch (13,577 gallons) per acre. In stationary or noncontinuous moving systems, inject the product-water mixture in the last 15 to 30 minutes of each set allowing sufficient time for all of the required pesticide to be applied by all the sprinkler heads and applying the labeled rate per acre for that crop. **DO NOT** apply when wind speed favors drift beyond the area intended for treatment.

- Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. Thorough coverage of foliage is required for good control. Maintain good agitation during the entire application period.
- If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts
- The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.
- The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
- The irrigation line or water pump must include a functional pressure switch, which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
- Systems must use a metering pump, such as a
 positive displacement injection pump (e.g., diaphragm
 pump), effectively designed and constructed of
 materials that are compatible with pesticides and
 capable of being fitted with a system interlock.
- Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water.
- DO NOT connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide labelprescribed safety devices for public water systems are in place.
- A person knowledgeable of the chemigation system

and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Specific Instructions for Public Water Systems

- Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regular serves an average of at least 25 individuals daily at least 60 days out of the year.
- 2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
- The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- 4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- 5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
- Systems must use a metering pump, such as a
 positive displacement injection pump (e.g.,
 diaphragm pump), effectively designed and
 constructed of materials that are compatible with
 pesticides and capable of being fitted with a system
 interlock.
- DO NOT apply when wind speed favors drift beyond the area intended for treatment

Additives and Tank Mixing Information

Serifel® Biofungicide can be tank mixed with most recommended fungicides, insecticides, herbicides, liquid fertilizers, biological control products, adjuvants, and additives as specified in Crop-Specific Directions. Before using any tank mix (fungicides, insecticides, herbicides, liquid fertilizers, biological control products, adjuvants, and additives); test the combination on a

small portion of the crop to be treated to ensure that a phytotoxic response will not occur as a result of application.

Consult a BASF representative or local agricultural authorities for more information concerning additives.

If tank mixtures are used, adhere to restrictions due to rates and precautions on all labels.

Compatibility Test for Tank Mix Components

Using a suitable container, add proportional amounts of product to water following the tank mixing order below.

TANK MIX COMPONENTS

- Water. For 100 gallons per acre spray volume, use 16 cups (1 gallon) of water. For other spray volumes, adjust rates accordingly. Use only water from the intended source at the source temperature.
- Water-dispersible products (dry flowables, wettable powders, suspension concentrates, or suspoemulsions). Cap the jar and invert 10 cycles.
- 3. Water-soluble products. Cap the jar and invert 10 cycles.
- Emulsifiable concentrates (oil concentrate or methylated seed oil when applicable). Cap the jar and invert 10 cycles.
- 5. Water-soluble additives. Cap the jar and invert 10 cycles.
- 6. Let the solution stand for 5 minutes.

Evaluate the solution for uniformity and stability. The spray solution should not have free oil on the surface, nor fine particles that precipitate to the bottom, nor thick (clabbered) texture. Simulate tank agitation by inverting the jar for another 10 cycles to insure that the mixture resuspends. If the tank mix combination does not settle or can be resuspended by agitation, it is considered physically compatible. **DO NOT** use any spray solution that could clog spray nozzles.

Mixing Order

- 1. Water. Begin by agitating a thoroughly clean sprayer tank 3/4 full of clean water. The pH of the spray solution should be between 4 and 9. The product mixture should be applied shortly after mixing. DO NOT store mixed slurries of Serifel overnight.
- 2. **Agitation.** Maintain constant agitation throughout mixing and application.
- 3. **Inductor.** If an inductor is used, rinse it thoroughly after each component has been added.
- 4. Products in PVA bags. Place any product contained in water-soluble PVA bags into the mixing tank. Wait until all water-soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.
- 5. Water-dispersible products (such as Serifel, dry flowables, wettable powders, suspension

- concentrates, or suspoemulsions).
- 6. Water-soluble products.
- 7. **Emulsifiable concentrates** (such as oil concentrates when applicable).
- 8. Water-soluble additives (such as AMS or UAN when applicable).
- 9. Remaining quantity of water.

Make sure that each component is thoroughly mixed and suspended before adding tank mix partners. Maintain constant agitation during application. See section **Crop-Specific Directions** for more details.

Restrictions and Limitations

• Crop Rotation Restriction - None

- Preharvest Interval (PHI) 0 Day
- Re-entry Interval (REI) 4 hours
- Not for use in greenhouse or transplant production
- Not for use in California on crops marked with an asterisk (*) in Crop-Specific Directions

Crop-Specific Directions

Crop	Target Disease	Product Use Rate per Application (oz of Serifel [®] Biofungicide/Acre)	Application Directions
Alfalfa and Clover[*] Includes alfalfa and clover mixed with forage grasses	Foliar diseases White mold (Sclerotinia sclerotiorum)	4 – 16 oz/A (0.25 – 1.0 lb/A)	White mold: Begin application shortly after emergence or transplanting and repeat on 7-10 day intervals as needed. Mix and apply Serifel in sufficient water volume to ensure uniform dispersion in spray tank and thorough coverage of foliage and shoot tissue.

Crop	Target Diseases	Product Use Rate per Application (oz of Serifel [®] Biofungicide/Acre)	Application Directions
Artichoke[*]	Anthracnose (Colletotrichum spp.) Alternaria leaf spot (Alternaria spp.) Botrytis gray mold (Botrytis spp.) Powdery mildew (Leveillula taurica) Ramularia leaf spot (Ramularia cynarae)	4 – 16 oz/A (0.25 – 1.0 lb /A)	Begin foliar applications before infection and continue on 7-10 day intervals if conditions are conducive for disease development. Use the higher rate and shorter interval when disease pressure is high. Mix and apply Serifel in sufficient water volume to ensure uniform dispersion in spray tank and thorough coverage of foliage and shoot tissue.
	Fusarium wilt (Fusarium spp.) Pythium damping off (Pythium spp.) Rhizoctonia crown rot (Rhizoctonia solani) Verticillium wilt (Verticillium spp.)	4 – 16 oz/A (0.25 – 1.0 lb /A)	See Application Instructions for In-Furrow, Drench, Shanked-In and Injected Applications Apply a high enough water volume to thoroughly soak soil through the root zone.

Crop	Target Diseases	Product Use Rate per Application (oz of Serifel [®] Biofungicide/Acre)	Application Directions
Asparagus[*]	Anthracnose (Colletotrichum spp.) Alternaria leaf spot (Alternaria spp.) Botrytis gray mold (Botrytis spp.) Phytophthora spear and crown rot (Phytophthora spp.) Watery soft rot (Sclerotinia spp.)	4 – 16 oz/A (0.25 – 1.0 lb/A)	Begin foliar applications prior to infection and continue on 7-10 day intervals if conditions are conducive for disease development. Use the higher rate and shorter interval when disease pressure is high. Mix and apply Serifel in sufficient water volume to ensure uniform dispersion in spray tank and thorough coverage of foliage and shoot tissue.
	Soil diseases Fusarium wilt (Fusarium spp.) Pythium damping off (Pythium spp.) Rhizoctonia root rot (Rhizoctonia solani)	4 – 16 oz/A (0.25 – 1.0 lb/A)	See Application Instructions for In-Furrow, Drench, Shanked-In and Injected Applications Apply a high enough water volume to thoroughly scak soil through the root zone.

Calamondin Citrus citron Citrus hybrids Chionja Grapefruit Kumquat Lemon Lime Mandarin Orange (sour and sweet) Pummelo Satsuma Tangelo Tangerine Tangor	Alternaria leaf spot (Alternaria spp.) Greasy spot (Mycosphaerella citri) Melanose (Diaporthe citri) Post bloom fruit drop (Colletotrichum spp.)	4 – 16 oz/A (0.25 – 1.0 lb/A)	For Greasy spot, begin applications at the start of each new flush of foliage and repeat for each new flush. Tank mix Serifel with labeled spray oil or copper based fungicide products. For Post bloom fruit drop, begin applications at early bloom when conditions are favorable for disease development. Continue on a 7-10 day interval as needed. For Alternaria leaf spot, begin foliar applications prior to infection and continue on 7-10 day intervals if conditions are conducive for disease development. Use the higher rate and shorter interval when disease pressure is high. For Melanose, begin applications at petal fall and continue on a 14-21 day interval as needed. Mix and apply Serifel in sufficient water volume to ensure uniform dispersion in spray tank and thorough coverage of foliage and shoot tissue.
	Soil diseases Phytophthora root rot (Phytophthora spp.) Pythium damping off (Pythium spp.)	4 – 16 oz/A (0.25 – 1.0 lb/A)	See Application Instructions for In-Furrow, Drench, Shanked-In and Injected Applications Apply a high enough water volume to thoroughly soak soil through the root zone.

Crop	Target Diseases	Product Use Rate per Application (oz of Serifel [®] Biofungicide/Acre)	Application Directions
Fruiting vegetables group[*] Eggplant Ground cherry Pepino Pepper (all varieties) Tomatillo Tomato	Anthracnose (Colletotrichum spp.) Botrytis gray mold (Botrytis spp.) Buck-eye rot (Phytophthora parasitica) Early blight (Alternaria spp.) Late blight (Phytophthora infestans) Powdery mildew (Leveillula spp. Oidiopsis spp., Erysiphe spp. Sphaerotheca spp.) Target spot (Corynespora cassiicola)[*]	4 – 16 oz/A (0.25 – 1.0 lb/A)	For Target spot, begin application shortly after emergence or transplanting and continue on 2-7 day intervals as needed. Use Serifel in a rotational program or tank mix with registered copper based bactericides. For Anthracnose, Botrytis gray mold, Buckeye rot and Powdery mildew, begin application shortly after emergence or transplanting and continue on 7-10 day intervals as needed. For Early blight and Late blight, begin application when plants are 4-6 inches tall and continue on 5-10 day intervals as needed. Mix and apply Serifel in sufficient water volume to ensure uniform dispersion in spray tank and thorough coverage of foliage and shoot tissue.
	Fusarium wilt (Fusarium spp.) Phytophthora root rot (Phytophthora spp.) Pythium damping off (Pythium spp.) Rhizoctonia root rot (Rhizoctonia solani) Sclerotinia stem rot (Sclerotinia sclerotiorum) Southern blight (Sclerotium rolfsii) Verticillium wilt (Verticillium spp.)	4 – 16 oz/A (0.25 – 1.0 lb/A)	See Soil Application Instructions for In-Furrow, Drench, Shanked-In and Injected Applications Apply a high enough water volume to thoroughly soak soil through the root zone, and/or complete coverage of the stem, all the way down to the soil, is required for suppression of soilborne diseases of the stem.

Crop	Target Diseases	Product Use Rate per Application (oz of Serifel [®] Biofungicide/Acre)	Application Directions
Grape[*]	Botrytis gray mold (Botrytis spp.) Downy mildew (Plasmopara viticola)[*] Eutypa (Eutypa lata) Phomopsis (Phomopsis viticola) Powdery mildew (Uncinula spp.[*], Erysiphe spp.) Summer bunch rot (Aspergillus spp.[*], Alternaria spp., Botrytis spp., Cladosporium spp.[*], Penicillium spp.[*], Rhizopus spp. [*])	4 – 16 oz/A (0.25 – 1.0 lb/A)	For Powdery mildew and Phomopsis, begin foliar applications at bud break or prior to onset of disease. Repeat applications on 5 –10 day intervals as needed. For Downy mildew, begin applications before pre-bloom and continue on 7–10 day intervals as needed. For Botrytis and Summer bunch rot, begin applications prior to disease development when conditions favor the development of Botrytis and sour rot such as during early bloom, bunch preclosure and veraison. Use higher rates and shorter intervals when disease pressure is high. For Eutypa, apply to pruning wounds. Sanitation of pruning tools is critical. Mix and apply Serifel in sufficient water volume to ensure uniform dispersion in spray tank and thorough coverage of foliage and shoot tissue.

Conditions of Sale and Warranty

The **Directions For Use** of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and must be followed carefully. However, it is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or use of the product in a manner inconsistent with its labeling, all of which are beyond the control of BASF CORPORATION ("BASF") or the Seller. To the extent consistent with applicable law, all such risks shall be assumed by the Buyer.

BASF warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the **Directions For Use**, subject to the inherent risks, referred to above.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BASF MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS OR MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BUYER'S EXCLUSIVE REMEDY AND BASF'S EXCLUSIVE LIABILITY, WHETHER IN CONTRACT, TORT, NEGLIGENCE, STRICT LIABILITY, OR OTHERWISE, SHALL BE LIMITED TO REPAYMENT OF THE PURCHASE PRICE OF THE PRODUCT.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BASF AND THE SELLER DISCLAIM ANY LIABILITY FOR CONSEQUENTIAL, EXEMPLARY, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

BASF and the Seller offer this product, and the Buyer and User accept it, subject to the foregoing **Conditions of Sale and Warranty** which may be varied only by agreement in writing signed by a duly authorized representative of BASF. Serifel is a registered trademark of BASF.
