DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

1. CROP: Peaches, Nectarines, Almonds and Stone Fruits
2. PEST: Oriental Fruit Moth [*Grapholita molesta*]
3. APPLICATION: MSTRS® OFM dispensers must be placed as high in the trees as possible, but at least in the upper third of the canopy. Dispensers must be placed in a 30 yd x 30 yd grid pattern [30 yd spacing between dispensers]. For many orchards this will be approximated by an "every 5th tree in every 3rd row pattern. Depending on the size of the orchard this will give a dispenser density of 7 - 10 dispensers per acre. As promulgated at 40 CFR 180.1153 DO NOT EXCEED the rate of 150 grams of active ingredient per acre per year.
4. TIMING: Deploy MSTRS® OFM immediately prior to the first emergence of Oriental Fruit Moth adults in early summer. Dispensers will emit effective amounts of pheromone for approximately 60 days.
5. NOTE: MSTRS® OFM impedes the mating of Oriental Fruit Moth adults in orchards. Because of the local movement of adult females, mated females from untreated areas can invade treated areas, therefore it is advantageous to treat as large an acreage as possible.
