### Note to Physician

•Potential mucosal damage may contraindicate the use of gastric lavage.

- Subsequent Treatment: When microbial control is evident, use TowerSAFE on an intermittent basis to provide a chlorine dioxide residual of 0.5 to 1.0 ppm for at least 30 minutes. The frequency of feeding and dosage rate will depend on the severity of the system.
- TowerSAFE can be added directly to the cold-water basin (drip pan) near the inlet of the recirculating pump. An alternative method is to prepare a stock solution of chlorine dioxide by placing TowerGUARD in a small container (e.g. 5 gallons) and feed the solution via a proportioning pump to the cold-water basin (drip pan) near the inlet of the recirculating pump. One TowerGUARD pouch in 5 gallons of water yields 330 ppm of total available chlorine dioxide after 40 minutes at room temperature (20°C) and 345 ppm of total available chlorine after 30 minutes at 40°C.

## STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.
