AMDRO[®]

FIRE ANT BAIT

YARD TREATMENT

Destroys Visible And Hidden Mounds!

HOW AMDRO FIRE ANT BAIT WORKS:

1. AMDRO is a bait. Worker ants carry it into the mound as food for the colony.
2. They eat it and feed it to the queen. AMDRO starts to kill ants immediately.
3. In about a week the queen is dead, which destroys the mound.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Outdoor Use

For large infested areas:
Using a rotary broadcast spreader or hand held granular spreader, broadcast AMDRO at 7.5 pounds per 7,500 to 15,000 sq. ft. For best results, apply when ants are active (typically when soil temperature is greater than 60°F). Repeat application as needed.

AMDRO Fire Ant Bait controls imported and native fire ants and other ants, such as harvester ants, bigheaded ants, and Argentine ants. AMDRO Fire Ant Bait is for use ONLY on lawns, landscaped areas, golf courses, commercial grounds, parks and other non-cropland areas, as well as on grounds surrounding poultry houses (including runs and ranges) or corrals and other animal holding areas. Avoid direct exposure of animals to AMDRO granules.

Do not graze or feed treated lawn or soil clippings to livestock.

This product is not for use on vegetable or other food crops, flowers or plants grown for sale or other commercial use, or for commercial seed production, or for research purposes.
