Statement per PR Notice 98-10

Dear Ms. Horton,

The Agency is in receipt of your Application for Pesticide Notification under Pesticide Registration Notices (PRNs) 98-10 and 2007-4 dated July 7, 2008 for the product AMDRO® Fire Ant Bait Yard Treatment Plus (EPA Registration Number 73342-6). The Registration Division (RD) has conducted its review of this request for its applicability under PRNs 98-10 and 2007-4 and finds that the label changes requested fall within the scope of PRNs 98-10 and 2007-4. The label submitted with the application has been stamped "Notification" and will be placed in our records.

The code may appear either on the label (and can be added by non-notification/PR Notice 98-10) or durably marked on the container itself.

If you have any questions, please call me directly at 703-305-6249 or Steve Schaible of my staff at 703-308-9362.

Sincerely,

3-way Protection Against Fire Ants

AMDRO® Fire Strike™ features a unique combination of two active ingredients that provide three-way protection against fire ants.

#### **1. KILLS the Queen**

Hydramethylnon is a deadly stomach toxicant. Worker ants carry hydramethylnon infused bait granules into the colony as food for other ants and the queen. After ingesting AMDRO® FireStrike™, the queen dies.

#### **2. STERILIZES New Invading Queens**

Methoprene is an Insect Growth Regulator (IGR). IGR's interrupt the life cycle of fire ants so that young maturing queens and new invading queens cannot reproduce.

#### **3. PREVENTS New Mounds from Forming**

Together, Hydramethylnon and Methoprene deliver a unique fire ant killing action that stops the development of new mounds.

**HOW AMDRO FIRE ANT BAIT YARD TREATMENT *PLUS* WORKS:**

1. This product is a fire ant killing bait combined with an insect growth regulator. Worker ants carry it into the mound as food for the colony.
2. They eat it and feed it to the queen – as a result, the queen cannot produce new ants.
3. Without new ants to forage for food, the colony starves.
4. Provides control of fire ants inhabiting visible mounds and the building of new mounds by unnoticed colonies is prevented.
