OFFICE OF CHEMICAL SAFETY AND POLLUTION PREVENTION

Nikki Yepez Canyon Group LLC c/o Gowan Company P.O. Box 5569 Yuma, AZ 85366-5569

JAN 2 3 2014

Subject:

Label Amendment - Reformat and Update Label

Yukon Herbicide

EPA Reg. No. 81880-6

Application dated - October 17, 2013

Dear Ms. Yepez:

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended, is acceptable.

A stamped copy of the label is enclosed for your records. This label supersedes all previously accepted labels. You must submit one (1) copy of the final printed label before you release the product for shipment. Products released for shipping after eighteen (18) months must bear the new revised label. If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA §6(e). Your release for shipment of the product constitutes acceptance of these conditions.

If you have any questions regarding this letter, please contact Maggie Rudick at (703) 347-0257 or <a href="maggie@epa.gov">rudick.maggie@epa.gov</a>.

Sincerely,

Kable Bo Davis
Product Manager 25

Herbicide Branch

Registration Division (7505P)

#### WATER SOLUBLE GRANULE

ACCEPTED

JAN 2 3 2014

Under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, for the pesticide registered under EPA Reg No. 81880-6

YUKON Herbicide is a selective herbicide for the control of listed annual broadleaf weeds and nutsedge in labeled crops

ACTIVE INGREDIENT:	% BY WT.
Halosulfuron-methyl, methyl 3-chloro-5-(4,6-dimethoxypyrimidin-2-ylcarbamoylsulfamoyl)	
-1-methylpyrazole-4-carboxylate)	12.5%
Sodium salt of dicamba, sodium 3,6-dichloro-o-anisate	55.0%
OTHER INGREDIENTS:	32.5%
TOTA	100.0%

# KEEP OUT OF REACH OF CHILDREN CAUTION

	FIRST AID	
IF IN EYES	<ul> <li>Hold eye open and rinse slowly and gently with water for 15 - 20 minutes.</li> <li>Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.</li> </ul>	
	Call a poison control center or doctor for treatment advice.	
IF SWALLOWED	Call poison control center or doctor immediately for treatment advice.	
	Remove visible particles from mouth.	
	<ul> <li>Have person rinse mouth thoroughly with water, spit out rinse water.</li> </ul>	
	Have person sip a glass of water if able to swallow.	
	<ul> <li>Do not induce vomiting unless told to do so by the poison control center or doctor.</li> </ul>	
	Do not give anything by mouth to an unconscious person.	
	HOT LINE NUMBER

# PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS CAUTION

CAUSES EYE IRRITATION. HARMFUL IF SWALLOWED. AVOID CONTACT WITH EYES OR CLOTHING.

#### PERSONAL PROTECTIVE EQUIPMENT (PPE)

Some materials that are chemical-resistant to this product are made of any waterproof materials. If you want more options, follow the instructions for Category A on an EPA chemical-resistance category selection chart.

All mixers, loaders, applicators, and other handlers must wear:

- · Long-sleeved shirt and long pants
- Shoes and socks
- · Chemical-resistant gloves (except for applicators using groundboom equipment, pilots, and flaggers).

See engineering controls for additional requirements.

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

#### **USER SAFETY RECOMMENDATIONS**

Users should:

- · Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly
  and change into clean clothing.

#### **ENGINEERING CONTROLS**

Pilots must use an enclosed cockpit that meets the requirements listed in the WPS for agricultural pesticides [40 CFR 170.240 (d)(6)].

NET CONTENTS \_\_\_\_ OZ.

Produced For: Canyon Group LLC C/O Gowan Company P.O. Box 5569 Yuma, AZ 85366-5569

EPA Reg. No. 81880-6 EPA Est. No.

3/ |11

#### **ENVIRONMENTAL HAZARDS**

This product is toxic to non-target vascular plants. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters.

Halosulfuron-methyl is known to leach through soil into ground water under certain conditions as a result of label use. This chemical may leach into ground water if used in areas where soils are permeable, particularly where the water table is shallow.

#### **DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in any manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

#### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard (WPS), 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the WPS.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the WPS and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls worn over short-sleeved shirt and short pants
- · Chemical-resistant footwear plus socks
- Chemical-resistant gloves made of any waterproof material
- Chemical-resistant headgear for overhead exposure
- Protective eyewear

#### PRODUCT INFORMATION

The level of weed control following YUKON Herbicide application is dependent upon application rate, weed species, size at application time, and growing conditions. For best results, applications should be made to actively growing weeds at the heights defined in the "WEEDS CONTROLLED BY YUKON HERBICIDE ALONE" sections of this label. Heavy infestations should be treated early before the weeds become too competitive with the crop. When early postemergence treatments are used in corn, sequential applications may be required to control later weed flushes.

Soon after YUKON Herbicide is applied, growth of susceptible weeds is inhibited, and susceptible weeds are no longer competitive with the crop. Following growth inhibition, the leaves and growing point begin to discolor. Complete control typically occurs within 7 - 14 days depending on the weed size, species, and growing conditions.

#### APPLICATION EQUIPMENT AND INSTRUCTIONS

Applications must be made by ground or aerial equipment to healthy, actively growing weeds. For best results, avoid applications when weeds are under drought stress, disease, or insect damage. Rainfall or irrigation occurring within 4 hours after application may also reduce effectiveness.

Ground Applications: Apply YUKON Herbicide uniformly with properly calibrated ground equipment in 10 or more gal. of water per acre. Other water based spray carriers may be used for directed applications, avoiding contact with crop foliage. Select spray volumes that ensure thorough and uniform weed coverage. Choose nozzles that provide optimum spray distribution and coverage at the appropriate pressure (psi). Use only ground application equipment. Thoroughly clean equipment prior to mixing spray solution. Avoid streaking, skips, overlaps, and spray drift during applications.

Do not apply this product through any type of irrigation system.

Avoid disturbing (e.g. cultivation) treated areas for at least 7 days following application.

**Aerial Applications**: Apply YUKON Herbicide uniformly with properly calibrated equipment in 5 - 15 gal. of water per acre. Thoroughly clean equipment prior to mixing spray solution. Avoid streaking, skips, overlaps, and spray drift during applications. This product should only be applied when the potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, or non-target crops) is minimal (e.g. when wind is blowing away from the sensitive areas).

Avoid disturbing (e.g. cultivation) treated areas for at least 7 days following application.

Thoroughly clean application equipment immediately after the use of YUKON Herbicide, following the directions under Procedure for Cleaning Spray Equipment.

#### **Spray Drift Management:**

AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR AND THE GROWER. The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions. The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses, or to applications using dry formulations.

- 1. The distance of the outer most nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.
- Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees. Where states have more stringent regulations, they must be observed.

#### The importance of spray droplet size:

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential but may not prevent drift if applications are made

4/1

improperly or under unfavorable environmental conditions (see the following Wind, Temperature and Humidity, and Temperature Inversion sections).

#### Controlling initial droplet size:

- Volume Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher flow rates produce larger droplets.
- **Pressure** Use the lower spray pressures recommended for the nozzle. Higher pressure reduces droplet size and does not improve canopy penetration. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- Number of nozzles Use the minimum number of nozzles that provide uniform coverage.
- Nozzle orientation Orienting nozzles so the spray stream is released backwards, parallel to the air stream, will produce larger droplets than other orientations. Significant deflection from the horizontal will reduce droplet size and increase drift potential.
- Nozzle type Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce larger droplets than other nozzle types.

#### Controlling placement of spray droplets:

- Boom length For some use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.
- Application height Applications must not be greater than 10 ft. above the top of the tallest plants unless a greater height is required for aircraft safety. Greater application heights result in greater droplet size reduction through evaporation and greater movement in air currents. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.
- · Application speed Slower aircraft speeds within a safe range will produce less air turbulence and fewer small droplets.
- Swath adjustment When applications are made with a cross-wind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (wind speed, droplet size, etc.).

#### Key environmental factors:

- Wind Drift potential is lowest between wind speeds of 2 -10 mph. However, many factors including droplet size and equipment type determine drift potential at any given speed. Application must be avoided when wind speeds are below 2 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Applicators should be familiar with local wind patterns and how they affect spray drift.
- Temperature and humidity When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.
- Temperature inversions Applications must not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable air currents that are common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke detector. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

#### **SENSITIVE CROP PRECAUTIONS:**

YUKON Herbicide may cause injury to desirable trees and plants, particularly beans, cotton, flowers, fruit trees, grapes, ornamentals, peas, potatoes, soybeans, sunflowers, tobacco, tomatoes and other broadleaf plants when contacting their roots, stems or foliage. These plants are most sensitive to YUKON Herbicide during their reproductive development stage. FOLLOW THE PRECAUTIONS LISTED BELOW WHEN USING THIS PRODUCT.

- Do not treat areas where either downward movement into the soil or surface washing may cause contact of YUKON Herbicide with the roots
  of sensitive plants such as trees and shrubs.
- Avoid making applications when spray particles may be carried by air currents to areas where sensitive crops and plants are growing, when temperature inversions exist, or if the wind is gusty or in excess of 10 mph.
- Use coarse sprays to avoid potential herbicide drift. Select nozzles that are designed to produce minimal amounts of fine spray particles.
   Examples of nozzles designed to produce coarse sprays via ground application are large capacity flood nozzles. Keep the spray pressure at or below 20 psi and the spray volume at or above 20 gpa, unless otherwise required by the manufacturer of drift-reducing nozzles. Consult your spray nozzle supplier concerning the choice of drift-reducing nozzles.
- Agriculturally approved drift-reducing additives may be used.
- Do not apply YUKON Herbicide adjacent to sensitive crops when the temperature at the time of application exceeds 85°F as drift is more likely to occur.
- To avoid injury to desirable plants, equipment used to apply YUKON Herbicide should be thoroughly cleaned (See PROCEDURE FOR CLEANING SPRAY EQUIPMENT) before reusing to apply any other chemicals.

Consult your local or state authorities for possible application restrictions and advice concerning these and other special local use situations. CALIFORNIA ONLY

#### Sensitive Crop:

### PRUNES

#### Buffer Zones:

- Aerial applications shall not be made closer than 4 miles.
- Ground applications shall not be made closer than 1 mile from prunes unless wind direction during the application is away from prunes. When wind direction during the ground application is away from prunes, ground applications shall not be made closer than 1/2 mile from prunes.

#### COTTON

#### **Buffer Zones:**

- 1. Aerial applications shall not be made closer than 1 mile from cotton.
- 2. Ground applications shall not be made closer than 1 mile from cotton unless wind direction during the application is away from cotton. When wind direction during the ground application is away from cotton, ground applications shall not be made closer than 1/2 mile from cotton.

#### PROCEDURE FOR CLEANING SPRAY EQUIPMENT

The steps listed below are suggested for thorough cleaning of spray equipment following applications of this product which contains dicamba. YUKON Herbicide requires the use of a water/detergent rinse.

1) Hose down the inside and outside surfaces of equipment thoroughly while filling the spray tank half full of water. Flush by operating sprayer until the rinse water is purged.

2) Fill tank with water while adding 2 lbs. of detergent for every 40 gal. of water. Circulate the detergent solution through the sprayer system for 5 - 10 minutes and spray a small amount of the solution through the boom and nozzles. Let the solution stand for several hours, preferably overnight.

3) Flush the detergent solution out through the boom until empty.

4) Repeat step 1, and follow with steps 5, 6, and 7.

5) Fill tank with water while adding 1 qt. of household ammonia for every 25 gal.of water. Circulate the ammonia solution through the sprayer system for 15 - 20 minutes and spray a small amount of the ammonia solution through the boom and nozzles. Let the solution stand for several hours, preferably overnight.

Flush the solution out through the boom until empty.

7) Remove the nozzles and screens and flush the system with 2 full tanks of water.

#### **ADJUVANTS**

Nonionic Surfactant (NIS) is required in the YUKON Herbicide spray solution. Use an NIS which is approved by EPA for use on food crops and which contains at least 80% active ingredient. Use NIS at 0.25 - 0.5% v/v concentration (1 - 2 qts. per 100 gal. of spray solution).

Crop oil concentrate (COC) can be used with YUKON Herbicide instead of NIS. Do not use both NIS and COC in the spray mixture. Add COC to the spray mixture at 1% v/v concentration (1 gal. per 100 gal. of spray solution). Use only an EPA approved, high quality petroleum or vegetable-based COC which contains at least 14% emulsifiers. Refer to the specific crop use direction and restrictions before adding COC adjuvants to the spray mixture.

Methylated Seed Oils (MSO) and MSO based adjuvants can be used with YUKON Herbicide instead of NIS. Do not use both NIS and MSO in the spray mixture. Add MSO to the spray mixture at 1% v/v concentration (1 gal. per 100 gal. of spray solution). Use only an EPA approved high quality MSO. Refer to the specific crop use direction and restrictions before adding MSO or MSO based adjuvants to the spray mixture.

Nitrogen fertilizer may be added to the spray solution for postemergent applications to improve the control of certain species. Apply a high quality, granular spray grade ammonium sulfate(AMS) at a rate of 2 - 4 lbs. per acre. Use of liquid AMS solution is allowed as long as the use rate selected equates to the amount of actual nitrogen applied in 2 - 4 lbs. of granular AMS. Another option would be to use liquid nitrogen fertilizer solution (e.g. 28-0-0) at a rate of 2 - 4 qts. per acre. Do not use liquid nitrogen fertilizer solutions or suspensions as the total carrier for postemergence applications or excessive crop injury may occur.

#### **MIXING INSTRUCTIONS**

Fill the spray tank to about 3/4 of the desired volume. Add the amount of this product as listed in the "WEEDS CONTROLLED BY YUKON HERBICIDE ALONE" sections. Complete the filling process while maintaining agitation. Remove the hose from the mixing tank immediately after filling to avoid siphoning back into the carrier source. Add NIS, COC, or other adjuvants as the last ingredients in the tank. Spray solutions should be applied within 24 hours after mixing.

- Heavy infestations of nutsedge may require sequential applications. An earlier treatment may be required to prevent nutsedge from competing with the crop.
- Certain biotypes of this weed species are known to be resistant to ALS herbicides. Label rates of YUKON Herbicide are required to achieve control.
- 3. Use maximum label rates for best results.

### APPLICATION INSTRUCTIONS PREHARVEST INTERVAL

The required days between last application and harvest (PHI) are given in ( ) after each crop name.

CROP	OZ./ACRE	COMMENTS
CORN, FIELD AND FIELD CORN GROWN FOR SEED (30)	4 - 8	YUKON HERBICIDE Post Field Corn Applications  Postemergence - Apply YUKON Herbicide over the top or with drop nozzles from the spike through 36 inch field corn. To maximize efficacy apply from spike through 20 inch field corn. Drop nozzles are recommended for corn greater than 20 inches to ensure proper weed coverage.  Refer to "MIXING INSTRUCTIONS" and "WEEDS CONTROLLED BY YUKON HERBICIDE ALONE" sections of this label for detailed information on YUKON Herbicide application.  Tank Mixtures for Corn:  Ensure that spray equipment is set up to avoid applying an excessive rate directly over the rows and into the whorl of the cornstalk. To ensure good spray coverage of weeds and to reduce the risk of spraying directly into the whorl, tank mix applications made after corn is 20 inches tall should be directed or semi-directed using drop nozzles.

TURFGRASS SOD	4 - 8	Postemergence - Apply YUKON Herbicide after nutsedge has reached the 3 - 5 leaf stage of growth. Use the lower rate in light infestations and the higher rate in heavy infestations. For control of purple or yellow nutsedge found in established turfgrass.  A second treatment may be required 6 - 10 weeks after the initial treatment. Apply YUKON Herbicide as a
,		sequential treatment, when new purple or yellow nutsedge plants have reached the 3 - 5 leaf stage of growth, Use the lower rate in light infestations and the higher rate in heavy infestations. No more than 2 applications can be made with the total use rate not exceeding 8 oz. of YUKON Herbicide per year.
		Use 0.25 - 0.5% NIS concentration (1 - 2 qts. per 100 gal. of spray solution) for broadcast applications. For high volume applications, DO NOT exceed 1 qt. of surfactant per acre. Use only NIS which contains at least 80% active material.
		DO NOT exceed the recommended amount of surfactant due to the potential for turf injury at higher rates. Refer to the surfactant label and observe all precautions, mixing and application instructions.
		Fallow Treatments in Turfgrass Seed and Sod Production Areas
		YUKON Herbicide can be used on fallow areas prior to establishing turfgrass plants. Allow 4 weeks between application and seeding or sodding of turfgrass.
		results, do not mow turf for 2 days before or 2 days after application.
	<ul> <li>This product in least 8 hours.</li> </ul>	s effective if no rainfall occurs within 3 hours, but best results are obtained with no rainfall or irrigation for at
	good root sys	may be used on seeded, sodded, or sprigged turfgrass that is well established. Allow the turf to develop a tem and uniform stand before application. Do not apply prior to first cutting on newly established sod.
	1	tion of YUKON Herbicide when turfgrass or nutsedge is under stress since turf injury and poor nutsedge
	control may re	esuit. has not been tested for all turf types.
		as an over-the-top spray to desirable shrubs or trees.
		and any other states of the st

ROTATIONAL CROP INFORMATION

Labeled crops may be planted at specified time intervals following application of approved rates of YUKON Herbicide. Use the time intervals listed below to determine the required time interval before planting.

TIME INTERVAL BEFORE PLANTING (Months after treatment with YUKON Herbicide)

Crop	Months	Exceptions
IR/IMR Field corn	. 0	
Sugarcane	0	
IT Field corn	1	
Normal Field corn	1	
Barley (winter)	2	
Forage Grasses	2	
Oats	2	
Proso Millet	2	
Rye (winter)	2	
Seed corn	2	·
Sorghums	2	
Spring cereal crops	2	
Wheat (winter)	2	
Rice	2	
Popcorn, Sweet corn	3	
Cotton	4	
Peanuts	6 °	
Tomato (transplant)	8	2 months in the northeast, southeast, and 3 months in TX
Alfalfa	9	
Clovers	9	
Dry Beans	9	2 months in the northeast, southeast and TX
Field Peas	9	
Peas	9	
Potatoes	9	
Cucumbers, Pumpkins, Squash	9	2 months in the southeast
Snap Beans	9	2 months in the northeast, southeast, and 3 months in TX
Soybeans	9	Where soil pH is less than 7.5 the interval is 5 months
Melons	9	
Peppers	10	4 months for FL transplants and 3 months in TX
Eggplant	12	4 months for FL transplants
Radish	12	3 months in the muck soil areas of FL only
Cabbage	15	3 months in the muck soil areas of FL only
Canola	15	
Carrot	15	

11/11

TIME INTERVAL BEFORE PLANTING (Months after treatment with YUKON Herbicide)

Mint	15	
Broccoli, Cauliflower, Collards	18	3 months in the muck soil areas of FL only
Leeks, Onions	18	
Lettuce crops	18	3 months in the muck soil areas of FL only
Sunflowers	18	
Sugarbeet (Michigan only)	, 21	
Sugarbeet and Red Beet	24	
Spinach	24	
Strawberries	36	6 months for annual FL transplants
Sugarbeet (ND, MN, Red River Valley)*	36	

<sup>\*</sup>Also includes other regions where rainfall is sparse or irrigation is required.

Refer to individual product labels to determine rotational crop restrictions when tank mixtures are used.

	·
Southeast:	AL, AR, FL, GA, LA, MS, NC, PR, SC, TN
Midwest/Northeast:	CT, DE, IA, IL, IN, KY, MA, MD, ME, MI, MN, MO, ND, NE, NH, NJ,
	NY, OH, PA, RI, SD, VA, VT, WI, WV

#### STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage and disposal.

PESTICIDE STORAGE: Store under cool, dry conditions (below 120° F). Do not store under moist conditions.

Keep container TIGHTLY sealed to prevent moisture from damaging any unused product.

**PESTICIDE DISPOSAL**: Wastes resulting from the use of this product must be disposed of on site or at an approved waste disposal facility. **CONTAINER HANDLING**: Nonrefillable container. Do not reuse or refill this container. Completely empty bag into application equipment. Then offer for recycling if available or dispose of empty bag in a sanitary landfill or by incineration or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

**DISPOSAL AUTHORITIES:** If none of the foregoing procedures is permitted by state and local authorities, then contact your State Pesticide or Environmental Control Agency, or your local Hazardous Waste Disposal office, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

#### FOR 24-HOUR EMERGENCY ASSISTANCE (SPILL, LEAK, OR FIRE), CALL CHEMTREC® (800) 424-9300.

For other product information, contact Gowan Company or see Material Safety Data Sheet.

#### NOTICE OF CONDITIONS OF SALE AND WARRANTY AND LIABILTY LIMITATIONS

Important: Read the entire Directions for Use and Notice of Conditions of Sale and Warranty and Liability Limitations before using this product. If terms are not acceptable return the unopened container for a full refund.

Our directions for use of this product are based on tests believed to be reliable. However, it is impossible to eliminate all risk associated with the use of this product. Crop injury, inadequate performance, or other unintended consequences may result due to soil or weather conditions, off target movement, presence of other materials, method of use or application, and other factors, all of which are beyond the control of Gowan Company. To the extent consistent with applicable law, all such risks shall be assumed by the Buyer and User.

Gowan Company warrants that this product conforms to the specifications on the label when used in strict conformance with Direction for Use, subject to the above stated risk limitations. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, GOWAN COMPANY MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

TO THE EXTENT PERMITTED BY LAW, GOWAN COMPANY'S EXCLUSIVE LIABILITY FOR ANY AND ALL LOSSES, INJURIES OR DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT WHETHER IN CONTRACT, WARRANTY, TORT, NEGLIGENCE, OR ANY OTHER LEGAL THEORY IS STRICTLY LIMITED TO THE PURCHASE PRICE PAID OR REPLACEMENT OF PRODUCT, AT GOWAN COMPANY'S SOLE DISCRETION.
