AND POLLUTION PREVENTION

May 28, 2020

Ericka Rohr Luke
Regulatory Affairs Specialist
Marrone Bio Innovations
1540 Drew Avenue
Davis, CA 95618

Subject: Non-PRIA (Pesticide Registration Improvement Act) Labeling Amendment – Revision to move Turf use to Sublabel A, reduce carrier volume for backpack sprayer applications, and add quinoa use.
Product Name: Regalia Bioprotectant Concentrate
EPA Registration Number: 84059-3
Application Date: 02/19/2020
OPP Decision Number: 560669

Dear Ms. Luke:

The amended labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended, is acceptable.

This approval does not affect any terms or conditions that were previously imposed on this registration. You continue to be subject to existing terms or conditions on your registration and any deadlines connected with them.

A stamped copy of your labeling is enclosed for your records. This labeling supersedes all previously accepted labeling. You must submit one (1) copy of the final printed labeling before you release this product for shipment with the new labeling. In accordance with 40 CFR § 152.130(c), you may distribute or sell this product under the previously approved labeling for 18 months from the date of this letter. After 18 months, you may only distribute or sell this product if it bears this new revised labeling or subsequently approved labeling. “To distribute or sell” is defined under FIFRA section 2(gg) and its implementing regulation at 40 CFR § 152.3.

Should you wish to add/retain a reference to your company’s website on your label, then please be aware that the website becomes labeling under FIFRA and is subject to review by the U.S. Environmental Protection Agency (EPA). If the website is false or misleading, the product will be considered to be misbranded and sale or distribution of the product is unlawful under FIFRA section 12(a)(1)(E). 40 CFR § 156.10(a)(5) lists examples of statements the EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product’s label, claims made on the website may not substantially differ from those claims approved through the registration

Page 2 of 2
EPA Reg. No. 84059-3
OPP Decision No. 560669

process. Therefore, should the EPA find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA-approved registration, the website will be referred to the EPA's Office of Enforcement and Compliance Assurance.

Your release for shipment of this product constitutes acceptance of these terms. If these terms are not complied with, this registration will be subject to cancellation in accordance with FIFRA section 6.

If you have any questions, please contact James Parker by phone at (703) 306-0469 or via email at parker.james@epa.gov.

Sincerely,

Andrew Bryceland, Team Leader
Biochemical Pesticides Branch
Biopesticides and Pollution
Prevention Division (7511P)
Office of Pesticide Programs

Sublabel A: Specialty Crops; Row Crops; Greenhouse; Turf

REGALIA® Bioprotectant Concentrate

A plant extract to boost the plants’ defense mechanisms to protect against certain fungal and bacterial diseases, and to improve plant health.

Active ingredient: Extract of *Reynoutria sachalinensis* 5 %
Other ingredients: 95 %
Total 100 %

EPA Reg. No. 84059-3

EPA Est. No. xxxxx-xx-xxx

GROUP P5 FUNGICIDE

KEEP OUT OF REACH OF CHILDREN

CAUTION

FIRST AID	
IF SWALLOWED:	Call poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.
IF ON SKIN OR CLOTHING:	Take off contaminated clothing. Rinse skin immediately with plenty of water for 15–20 minutes. Call a poison control center or doctor for treatment advice.
IF INHALED:	Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth if possible. Call a poison control center or doctor for further treatment advice.
IF IN EYES:	Hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.
HOTLINE NUMBER	
Have the product container or label with you when calling a poison control center or doctor, or if going for treatment. You may also contact 1-800-222-1222 for emergency medical treatment information.

REGALIA® Bioprotectant Concentrate; EPA Reg. No. 84059-3

MASTER LABEL – v.22 April 03, 2019

Page 2 of 58

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Causes moderate eye irritation. Avoid contact with eyes or clothing. Wear goggles or safety glasses. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Shoes plus socks
- Waterproof gloves
- Protective eyewear

Follow manufacturer's instructions for cleaning and maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENVIRONMENTAL HAZARDS

For terrestrial uses: do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater or rinsate.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exemptions pertaining to the statements on this label about personal protective equipment (PPE) and the restricted-entry interval (REI). The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated such as plants, soil or water is:

- Coveralls
- Waterproof gloves
- Shoes plus socks
- Protective eyewear

Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated. The REI does not apply when this product is used for seed treatment at planting or in hopper box treatments.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

GENERAL INFORMATION

REGALIA® Bioprotectant Concentrate is an extract from the plant *Reynoutria sachalinensis* for use on ornamental plants, turf, row, greenhouse, and edible and field crops. REGALIA® Bioprotectant Concentrate applied to actively growing plants (see DIRECTIONS FOR USE) will help protect treated portions from certain plant diseases and will improve plant health. Plant health benefits often result in greater yields at harvest, especially when crops are stressed by pathogens or environmental conditions. Use REGALIA® Bioprotectant Concentrate as a preventative rather than a curative application. Apply prior to disease infestation to protect the growing leaf tissue, flowers and above ground fruit and vegetables. See specific information below for diseases controlled and use rates on ornamental plants, turf, row, greenhouse, field and edible crops.

REGALIA® Bioprotectant Concentrate can be used in multiple application methods to control or suppress certain soil-borne or foliar diseases and to promote healthy plant growth. See below for specific information on diseases controlled and use rates.

MODE OF ACTION

The extract obtained from *Reynoutria sachalinensis* plant material contains bioactive compounds. The extract, when applied to the host plant, activates the plant's defense system to increase phenolics and antioxidants, and strengthen cell walls. This mode of action is classified as induced systemic resistance.

When applied at rates and timing for disease control, the induced resistance against important diseases provides translaminar activity, which takes place within one to two days of application. Repeat foliar applications per label instructions. Use REGALIA® Bioprotectant Concentrate, therefore, as a preventative treatment. In addition to foliar applications, REGALIA® Bioprotectant Concentrate can be used in multiple application methods as a plant dip, soil drench, in-furrow spray, or applied through drip irrigation to control or suppress certain soil-borne diseases and to promote healthy root growth.

When applied at rates and timing for plant health effects, the improved plant defense responses minimize the impacts of stress and disease, resulting in optimized yields at harvest. Applying Regalia® Bioprotectant Concentrate has been shown to increase leaf chlorophyll content and increase soluble protein content in some crops. These effects often lead to improved crop quality and/or yields.

MIXING AND APPLICATION INSTRUCTIONS

– SHAKE WELL PRIOR TO USE –

Mixing instructions: Prepare no more mixture than is required for the immediate operation. Agitate the solution continuously during mixing and application. Mechanical mixing is recommended for proper mixing of REGALIA® Bioprotectant Concentrate mixtures.

REGALIA® Bioprotectant Concentrate alone: Add ½ of the required amount of water to the mix tank. With the agitator running, add the REGALIA® Bioprotectant Concentrate to the mix tank. Continue agitation while adding the remainder of the water. Begin application of the solution after the REGALIA® Bioprotectant Concentrate has completely dispersed into the mix water. Maintain agitation until all the mixture has been applied.

REGALIA® Bioprotectant Concentrate + tank mixtures: Add ½–¾ of the required amount of water to the mix tank. Start the agitation before adding any tank mix ingredients. In general, tank mix ingredients should be added in this order: wettable powders, dry flowable formulations, liquid flowable formulations, and emulsifiable formulations such as REGALIA® Bioprotectant Concentrate. Always allow each tank mix ingredient to become completely dispersed before adding the next component. Maintain continuous agitation until all components have been dispersed and throughout the application process. After all components are completely dispersed add the remainder of the water. REGALIA® Bioprotectant Concentrate cannot be mixed with another product with a prohibition against mixing. Use of the tank mix must be in accordance with the most restrictive label limitations and precautions. **Do**

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

not pre-mix REGALIA® Bioprotectant Concentrate with any other tank mix component prior to adding to the spray tank.

Note: When using REGALIA® Bioprotectant Concentrate in tank-mixtures, all products in water soluble packaging should be added to the tank before any other tank-mix ingredient, including REGALIA® Bioprotectant Concentrate. Allow the water-soluble packaging to completely dissolve and the product(s) to completely disperse before adding any other tank-mix ingredient to the tank.

Compatibility: Do not combine REGALIA® Bioprotectant Concentrate in the spray tank with pesticides, adjuvants, or fertilizers if there has been no previous experience or use of the combination to show it is physically compatible, effective, and non-injurious under your use conditions. REGALIA® Bioprotectant Concentrate is compatible with many commonly used pesticides, fertilizers, adjuvants, and surfactants, but has not been evaluated with all potential combinations. To ensure compatibility of the tank mix combinations, evaluate prior to use as follows: Using a suitable container, add the proportional amounts of product to water. Add wettable powders first, then water dispersible granules, then liquid flowables, and lastly, emulsifiable concentrates. Mix thoroughly and let stand for at least five minutes. If the combination stays mixed or can be remixed, it is physically compatible. Test the mix on a small portion of the crop to be treated to ensure that a phytotoxic response will not occur as a result of the application.

Application Instructions: REGALIA® Bioprotectant Concentrate is a micro-emulsion concentrate consisting of certain ingredients extracted from *Reynoutria sachalinensis*. Use 50-mesh nozzle screens or larger. Use higher water volumes with larger sized crops and extensive foliage to obtain thorough coverage.

See **FOLIAR AERIAL and FOLIAR GROUND APPLICATION** section for use directions.

See **BACKPACK/HANDHELD SPRAYER** section for use directions.

See **CHEMIGATION** section for use directions.

See **PRE-PLANT DIP** section for use directions.

See **SEED TREATMENT** section for use directions.

See **SOIL TREATMENT** section for use directions.

FOLIAR AERIAL APPLICATION INSTRUCTIONS

0.5–1 quart per acre for FOLIAR (AERIAL) applications

- (For aerial applications, apply this product in a minimum of (2 to 10) gallons of water per acre.)
- (Apply this product preventatively or when the first disease symptoms are visible and reapply every 7–14 days)
- (For improved performance, use this product in a tank mix or rotational program with other registered fungicides.) (Tank mix this product with other registered fungicides for improved disease control under (heavy) (high disease) pressure.)
- (Repeat applications at (5-14) (7-10) (7–14) day intervals) (depending upon crop growth and disease pressure)
- (Under moderate to heavy disease pressure, tank mix this product with another fungicide.)
- (Consult your local Extension Specialist or Crop Consultant regarding the optimum timing of fungicide applications)
- (For grasses including forage, fodder, hay, and cereals, and for non-grass animal feed:) (It is important to apply this product at the flag leaf stage to maximize yield.)
- (Increasing the amount of water applied per acre will improve product performance.)
- (Follow all instructions to reduce aerial drift.)

AERIAL DRIFT REDUCTION ADVISORY INFORMATION

GENERAL: Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions. Where states have more stringent regulations, they should be observed. Note: This section is advisory in nature and does not supersede the mandatory label requirements.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

INFORMATION ON DROPLET SIZE: The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply droplets large enough to provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

CONTROLLING DROPLET SIZE: Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets. Pressure – Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types, lower pressure produces larger droplets. When high flow rates are needed, use higher flow rate nozzles instead of increasing pressure. Number of Nozzles – Use the minimum number of nozzles that provide uniform coverage. Nozzle Orientation – Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential. Nozzle Type – Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

BOOM WIDTH: For aerial applications, the boom width must not exceed 75% of the wingspan or 90% of the rotary blade. Use upwind swath displacement and apply only when wind speed is 3–10 mph as measured by an anemometer. Use medium or coarser spray according to ASAE 572 definition for standard nozzles or VMD for spinning atomizer nozzles. If application includes a no-spray zone, do not release spray at a height greater than 10 feet above the ground or crop canopy.

APPLICATION HEIGHT: Do not make application at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

SWATH ADJUSTMENT: When applications are made with a crosswind, the swath will be displaced downward. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller drops, etc.).

WIND: Drift potential is lowest between wind speeds of 2–10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

TEMPERATURE AND HUMIDITY: When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

TEMPERATURE INVERSIONS: Do not apply during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small, suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

SENSITIVE AREAS: The pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g. when wind is blowing away from the sensitive areas). Do not allow spray to drift from the application site and

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

contact people, structures people occupy at any time and the associated property, parks and recreation areas, non-target crops, aquatic and wetland areas, woodlands, pastures, rangelands, or animals.

FOLIAR (GROUND) APPLICATION USE DIRECTIONS

REGALIA® Bioprotectant Concentrate can be applied in most commonly-used ground application equipment, such as tractor-mounted boom, airblast, high clearance, hose-end, backpack, and other pressurized sprayers; or hand-held sprayers; foggers or mist blowers; water wheel and other drench applicators; and shank or other soil injection method. Thorough coverage is necessary to provide good disease control.

0.5–4 quarts per acre (0.5 – 6 tbsp. per 1000 sq. ft.) for FOLIAR (GROUND) applications

- (For ground applications,)(For foliar applications)(to optimize disease control and to maximize yields,)(apply ([specify volume])(of) (this product) (preventatively) in 15–100 gallons of water per acre) (0.5 – 2.5 gallons of water per 1000 sq. ft.) (by ground or aerial application) (prior to disease development using) (sufficient volume for thorough coverage.) (or when the first symptoms of disease are visible) (at 7 day spray intervals or) (as soon as the first symptoms of disease appear) (or when environmental conditions are conducive to rapid disease development.) (Begin application soon after emergence or transplant, and when conditions are conducive to disease development.) (when applied alone, or at 1–4 quarts per acre (1.5 – 6 tbsp. per 1000 sq. ft.) when tank mixed with another fungicide preventatively in a minimum of 25 gallons of water per acre (0.5 gallons per 1000 square feet))
- (Additional sprays beyond second cover may be needed on susceptible varieties, or when environmental conditions are conducive to rapid disease development. Use high label rate and shorter spray intervals when conditions are conducive to rapid disease development.) (Use shorter intervals when conditions are conducive to rapid disease development.)
- (Avoid excessive amounts of water that result in the runoff of spray material)
- (Continue sprays at 7-day intervals or as needed) (For foliar applications, mix this product concentrate with water at a concentration of 2–4 quarts per 100 gallons of water (1.5 – 2.5 tbsp. per gallon of water) when used alone or 1–4 quarts per 100 gallons of water (1 – 2.5 tbsp. per gallon of water) when tank mixed with another fungicide) (If necessary, repeat applications at a 7-day interval.)
- (Begin applications preventatively (before disease symptoms become visible) at the 4 to 6-leaf stage and treat at 7–10 day intervals as needed prior to sale or harvest. Spray until just before point of runoff.)
- (Increase water volume as plant size increases.)
- (Do not exceed 1.0% v/v of the applied solution.)
- (Apply this product preventatively or when the first disease symptoms are visible) (and reapply every 7–14 days.)
- (Repeat applications at (5-14) (7–10) (7-14) day intervals) (depending upon crop growth and disease pressure)
- (Under moderate to heavy disease pressure, tank-mix this product with another fungicide.)(When the plants are) (under high disease pressure, tank-mix this product with another fungicide for more effective control.)(Tank mix this product with other registered fungicides for improved disease control under heavy pressure.)(For improved performance,(apply 0.5–2 quarts per acre (0.5 – 3 tbsp. per 1000 sq. ft.) of) (use) this product in a tank mix (or rotational program) with other registered fungicides)(When tank mixed with other fungicides, use 1–2 quarts of REGALIA® Bioprotectant Concentrate per acre (1.5 – 3 tbsp. per 1000 sq. ft.)).(This product can be tank mixed at the lower rate with another registered fungicide under heavy disease pressure)
- (For trees and vines:)(Dilute applications: this product can be applied by ground equipment to (vine and)tree crops in dilute applications of 100–400 gallons of water per acre (2.5 – 9 gallons of water per 1000 square feet). Apply this product at a rate of 2–4 quarts per acre (3 – 6 tbsp. per 1000 sq. ft.) when applied alone, or at 1–4 quarts per acre (1.5 – 6 tbsp. per 1000 sq. ft.) when tank mixed with another fungicide. Avoid excessive amounts of water that result in the runoff of spray material)
- (Consult your local Extension Specialist or Crop Consultant regarding the optimum timing of fungicide applications.)
- (For grasses including cereals, forage, fodder, hay, and for non-grass animal feed:) (It is important to apply this product at the flag leaf stage to maximize yield.)

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

- (Apply product at 1-4 quarts per acre (1.5 – 6 tbsp. per 1000 sq. ft.) when applied in a tank mix, or at 2-4 quarts per acre (3 – 6 tbsp. per 1000 sq. ft.) when applied alone.)
- (For concentrated ground applications, apply this product at 0.5–1.5 quarts per acre (0.5 – 2.5 tbsp. per 1000 sq. ft.) in a minimum of 10 gallons of water per acre (1 quart of water per 1000 sq. ft.).)
- (For plant health applications, apply (10-14 days) (two to three weeks) prior to cutting) (Foliar applications of Regalia to improve plant health can be made during the period from layby to contact sprays)
- (This product may be used to control certain diseases of container, bench, flat, plug, bed, or field-grown ornamentals in **greenhouses, shade-houses, outdoor nurseries, retail nurseries, and other landscape areas.**)

BACKPACK/HAND-HELD SPRAYER USE DIRECTIONS

The use rate for REGALIA® Bioprotectant Concentrate when applied alone or as an alternate spray in a backpack or hand-held sprayer is 1.5 – 2.5 tablespoons (Tbsp.) (1 – 1.5 fluid ounces [fl. oz.] per gallon of water (0.5 – 1.0% v/v dilution of REGALIA® Bioprotectant Concentrate) applied at 0.5 – 2.5 gallons per 1000 square feet (sq. ft.) (25 – 100 gallons of water per acre). When tank mixed with another fungicide, the use rate for REGALIA® Bioprotectant Concentrate in a backpack or hand-held sprayer is 0.5 – 2.5 tablespoons (0.5 – 1.5 fluid ounces) per gallon of water applied at 0.5 – 2.5 gallons per 1000 square feet (25 –100 gallons of water per acre). Use higher water volumes with larger sized crops and extensive foliage in order to secure thorough coverage. Do not use carrier volumes and/or adjuvants that create spray runoff or drip-accumulation at the base of fruit or on the harvested commodity. See specific application recommendations pertaining to each crop for additional details.

Use rate for REGALIA® Bioprotectant Concentrate

	Tablespoons REGALIA® Bioprotectant Concentrate per Gallon of Water	Fluid Ounces REGALIA® Bioprotectant Concentrate per Gallon of Water	v/v Dilution of REGALIA® Bioprotectant Concentrate	Applied (diluted) Gallons per 1,000 sq. ft.
Applied alone or as an alternate spray	1.5 – 2.5	1 – 1.5	0.5 – 1.0% v/v	1 – 2.5
Tank mixed with another fungicide	0.5 – 2.5	0.5 – 1.5	0.25 – 1.0% v/v	1 – 2.5

CHEMIGATION USE DIRECTIONS

(For control of foliar diseases and plant health apply this product through sprinkler center pivot sprinkler systems, lateral move, end tow, side (wheel) roll, traveler, solid set, hand moved. Do not use reclaimed water for application of this product.)

(For control of soil-borne or below ground diseases and plant health apply this product through furrow irrigation, injection into water stream, flood (basin), border or drip (trickle) irrigation systems. Do not use reclaimed water for application of this product.)

1–4 quarts per acre (1.5 – 6 tbsp. per 1000 sq. ft.) for CHEMIGATION applications

- For chemigation applications (for improved plant growth) (and suppression of soil-borne diseases), apply this product through (drip) irrigation immediately after transplant and at 14-day intervals or begin 14 days after transplant when soil drench applications are used.

Spray preparation

First prepare a suspension of REGALIA® Bioprotectant Concentrate in a mix tank. Fill tank ½ to ¾ the desired amount of water. Start mechanical or hydraulic agitation. Add the required amount of REGALIA® Bioprotectant Concentrate, and then the remaining volume of water. Then set the irrigation system to deliver a minimum of 0.1 to 0.3 inch of

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

water per acre. Start irrigation system and uniformly inject the suspension of REGALIA® Bioprotectant Concentrate into the irrigation water line so as to deliver the desired rate per acre. Inject the suspension of REGALIA® Bioprotectant Concentrate with a positive displacement pump into the main line after the filter, and ahead of a right angle turn to insure adequate mixing. Any questions on calibration should be directed to your State Extension Service Specialists, to equipment manufacturers or other experts.

Do not combine REGALIA® Bioprotectant Concentrate with pesticides, surfactants or fertilizers for application through chemigation equipment unless prior experience has shown the combination physically compatible, effective and non-injurious under conditions of use. REGALIA® Bioprotectant Concentrate has not been fully evaluated for compatibility with all adjuvants or surfactants. Conduct a spray compatibility test if a mixture with adjuvants or surfactants is planned.

CHEMIGATION

General Requirements –

- 1) Apply this product only through a drip or trickle system or center pivot sprinkler system, lateral move, end tow, side (wheel) roll, traveler, solid set, hand move, flood (basin), furrow, border or drip (trickle) irrigation systems.
- 2) Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.
- 3) If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.
- 4) Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.
- 5) A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Application Instructions for All Types of Chemigation –

- 1) Remove scale, pesticide residues, and other foreign matter from the chemical supply tank and entire injector system. Flush with clean water. Failure to provide a clean tank, void of scale or residues may cause product to lose effectiveness or strength.
- 2) Determine the treatment rates as indicated in the directions for use and make proper dilutions. Product can be applied continuously or at any time during the water application.
- 3) Prepare a solution in the chemical tank by filling the tank with the required water and then adding product as required
- 4) The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- 5) The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- 6) The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
- 7) Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Specific Requirements for Chemigation Systems Connected to Public Water Systems –

- 1) Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

- 2) Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
- 3) Do not apply when wind speed favors drift beyond the area intended for treatment.

Specific Requirements for Sprinkler Chemigation –

- 1) The system must contain a functional check valve, vacuum relief valve and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
- 2) The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
- 3) Do not apply when wind speed favors drift beyond the area intended for treatment.

Specific Requirements for Flood (Basin), Furrow and Border Chemigation –

- 1) Systems using a gravity flow pesticide dispensing system must meter the pesticide into the water at the head of the field and downstream of a hydraulic discontinuity such as a drop structure or weir box to decrease potential for water source contamination from backflow if water flow stops.
- 2) The systems utilizing a pressurized water and pesticide injection system must meet the following requirements:
 - a. The system must contain a functional check valve, vacuum relief valve and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
 - b. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Specific Requirements for Drip (Trickle) Chemigation –

- 1) The system must contain a functional check valve, vacuum relief valve and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
- 2) The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

PRE-PLANT DIP USE DIRECTIONS

Apply REGALIA® Bioprotectant Concentrate as a pre-plant dip for improved plant health and suppression of certain soil-borne diseases.

1–4 quarts per 100 gallons (1 – 2.5 tbsp. per gallon) of water for PLANT DIP (bare root) applications

- For plant dip applications for improved plant growth and suppression of soil-borne diseases, apply this product in a 0.25–0.5 % v/v suspension (1–4 quarts of this product per 100 gallons (or 1 – 2.5 tbsp. per gallon) of water as a pre-plant dip immediately prior to transplanting.

SEED TREATMENT USE DIRECTIONS

REGALIA® Bioprotectant Concentrate can be applied as a seed (or seed piece) dressing for suppression of soil-borne diseases to improve early-season root growth. REGALIA® Bioprotectant Concentrate may be applied with other registered seed treatment insecticides and fungicides through standard slurry- or mist-type commercial seed treatment equipment. (REGALIA® Bioprotectant Concentrate can also be used in on-farm hopper-box or planter-box treatments.)

If using REGALIA® Bioprotectant Concentrate in a tank mixture with other seed treatment products, observe all directions for use, crops/sites, use rates, dilution ratios, precautions, and limitations which appear on the tank-mix

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

ingredient label. Do not exceed label rates and the most restrictive label precautions and limitations must be followed. Do not mix this product with any product which prohibits such mixing.

0.5–15 fluid ounces per 100 lbs. seed for SEED TREATMENT applications

- For suppression of soil-borne diseases, apply this product as a seed treatment at the rate of 0.5–15 fl. oz. per 100 lbs. seed.

(Do not apply this product through any type of irrigation system.)

SOIL TREATMENT USE DIRECTIONS

REGALIA® Bioprotectant Concentrate can be applied by soil drench or in-furrow spray to improve plant health and to protect against certain soil-borne diseases.

In general, REGALIA® Bioprotectant Concentrate can be applied by the following methods, unless specified differently in the SELECTED CROPS section:

Soil Drench Applications:

1–3 quarts per 100 gallons (1 – 2 tbsp. per gallon) of water for SOIL DRENCH applications

- For soil drench applications, apply this product at a concentration of 1–3 quarts per 100 gallons (1 – 2 tbsp. per gallon) of water, and at a sufficient rate to thoroughly soak the growing media and root zone. Make an initial application of this product during or shortly after transplant to reduce transplant shock, suppress soil-borne diseases and improve root growth. (Multiple drench applications can be made on a 10–14 day interval.)

In-Furrow, Shanked-In and Injected Applications:

(REGALIA® Bioprotectant Concentrate can be shanked-in or injected into the soil alone, or with most types of liquid nutrients.)

0.5–4 quarts per acre or 1–10 fluid ounces per 1000 ft. row for IN-FURROW applications

- For in-furrow applications, at planting apply this product as an in-furrow spray at the rate of 0.5–4 quarts per acre or 1–10 fluid ounces per 1000 feet of row according to the chart (in the SOIL TREATMENT USE DIRECTIONS section)(below). Apply this product in 5–15 gallons of water so as the spray is directed into the seed furrow just before the seeds are covered.

Rate Per Acre	In-Furrow Application Rates Product per 1000 ft. row (fl. oz.)

FOR USE ON THE FOLLOWING CROPS FOR CONTROL OR SUPPRESSION OF (THE FOLLOWING) (DISEASES) (PATHOGENS)(PESTS)

The use rate for REGALIA® Bioprotectant Concentrate when applied alone or as an alternate spray is 2–4 quarts per 100 gallons (1.5 – 2.5 tbsp. per gallon) of water (0.5–1.0% v/v dilution of REGALIA® Bioprotectant Concentrate)

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

applied at 15–100 gallons of water per acre (0.5 – 2.5 gallons per 1000 square feet). When tank mixed with another fungicide, the use rate for REGALIA® Bioprotectant Concentrate is 1–4 quarts in 100 gallons (1 – 2.5 tbsp. per gallon) of water applied at 15–100 gallons of water per acre (0.5 – 2.5 gallons per 1000 square feet). Use higher water volumes with larger sized crops and extensive foliage in order to secure thorough coverage. Do not use carrier volumes and/or adjuvants that create spray runoff or drip-accumulation at the base of fruit or on the harvested commodity. See specific application recommendations pertaining to each crop for additional details.

GREENHOUSE USE – This product can be used to control certain diseases of container, bench, flat, plug, bed or field-grown ornamentals and edible crops in greenhouses, shade-houses, outdoor nurseries, retail nurseries and other landscape areas. For greenhouse application on the crops and diseases listed, the recommended use rate for REGALIA® Bioprotectant Concentrate is 2–4 quarts in 100 gallons (1.5 – 2.5 tbsp. per gallon) of water (0.5–1.0% v/v dilution of REGALIA® Bioprotectant Concentrate) sprayed until just before point of runoff. When tank mixed with another fungicide, the use rate for REGALIA® Bioprotectant Concentrate is 1–4 quarts in 100 gallons (1 – 2.5 tbsp. per gallon) of water. Repeat at 7–14-day intervals as needed. See specific application recommendations for each crop for additional details. (Keep relative humidity below 70% to avoid risk of phytotoxicity.) (Since it is not possible to test all ornamental species or varieties grown in the greenhouse, test Regalia® Bioprotectant Concentrate on a few plants prior to large-scale usage.)

Pre-harvest Interval (PHI) = 0 days

ROOT, TUBER AND CORM CROPS

Potato, Beet, Carrot, Cassava, Ginger, Ginseng, Horseradish, Radish, Sugar beet, Sweet Potato, Turnip (including those for seed production) and other root and tuber crops

For suppression of Early Blight, Black Root Rot/Black Crown Rot, and Late Blight, begin application of this product in 25–100 gallons of water per acre (0.5 – 2.5 gallons of water per 1000 square feet) soon after emergence when conditions are conducive to disease development. Repeat on a 5–7-day interval or as needed. For improved performance, use this product in a tank mix with other registered fungicides.

1-16 fl oz. per 100 pounds of seed pieces for SEED PIECE DIP applications

- For seed piece dip applications for improved plant growth and suppression of soil-borne diseases, apply this product to seed pieces prior to planting.

LEAVES OF ROOT AND TUBER VEGETABLES

Beet, Chervil, and other leaves of roots and tubers

BULB VEGETABLES

Onion (Bulb and Green), Garlic, Leek, Shallot and other bulb vegetables

LEAFY VEGETABLE CROPS (except *Brassica* vegetables)

Arugula, Celery, Cilantro, Corn Salad, Cress, Dandelion, Dock, Edible Chrysanthemum, Endive, Head Lettuce, Leaf Lettuce, Parsley, Purslane, Radicchio, Rhubarb, Spinach, Swiss Chard, Turnip, Watercress and other leafy vegetable crops

- West of the Rocky Mountains – For aerial applications, apply this product at 0.5–1.5 quarts per acre in a minimum of 10 gallons of water per acre
- East of the Rocky Mountains – For aerial applications, apply this product at 0.5–1 quarts per acre in a minimum of 5 gallons of water per acre.
- For California – For aerial application apply REGALIA® Bioprotectant Concentrate at 1–3 pints per acre in 10–25 gallons of water per acre.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

Restrictions:

Do not apply REGALIA® Bioprotectant Concentrate when extended/unseasonably cold or cold and cloudy conditions are expected. Regalia should **not** be applied when night-time temperatures will fall below 45°F and relative humidity is predicted to be above 80%. Applications during daylight hours are preferred over night-time applications.

BRASSICAS (COLE) LEAFY VEGETABLES

Broccoli, Broccoli Rabe, Brussels Sprouts, Cabbage, Chinese Broccoli, Chinese Cabbage (Bok Choy), Chinese Cabbage (Napa), Chinese Mustard Cabbage (Gai Choy), Cauliflower, Cavalo, Collards, Kale, Kohlrabi, Mizuna, Mustard Greens, Mustard Spinach, Rape Greens, and other cole crops

LEGUME VEGETABLES, succulent or dried (not including soybeans and peanuts)(not including peanuts)

Chick Peas, Dry Beans, Green Beans, Lentils, Lima Beans, Peas, Shell Beans, Snap Beans, Split Peas (including those grown for seed or oil production), Soybeans (and other legume vegetables)

To maximize activity against *Sclerotinia* white mold in soybeans, the best timing would be V3 to R3 and should be tank mixed with a fungicide partner also labeled for white mold activity.

Repeat applications on 7–10 day intervals depending upon crop growth and disease pressure.

FOLIAGE OF LEGUME VEGETABLES

Garden peas and other foliage of legume vegetables

FRUITING VEGETABLES

Tomato, Pepper, Eggplant, Ground Cherry, Okra, Tomatillo and other fruiting vegetables

- Phytophthora Blight – Apply this product in combination with labeled rates of a copper fungicide (or with another fungicide labeled for Phytophthora Blight control).

CUCURBITS

Includes all types and hybrids of: Acorn squash, Balsam apple, Balsam pear, Bitter melon, Butternut squash, Calabaza, Cantaloupe, Casaba, Chayote, Chinese cucumber, Chinese okra, Chinese waxgourd, Citron melon, Crenshaw melon, Crookneck squash, Cucumber, Cucuzza, Gherkin, Golden pershaw melon, Honeydew melon, Honey balls, Hubbard squash, Hyotan, Mango melon, Persian melon, Pineapple melon, Pumpkin, Santa Claus melon, Scallop squash, Snake melon, Spaghetti squash, Straightneck squash, Vegetable marrow, Watermelon, Zucchini and other cucurbits

- When greenhouse cucurbits are under high disease conditions, use the shorter spray interval.
- Downy Mildew – Tank mix this product with another fungicide labeled for Downy Mildew control and re-apply at a 7-day interval or according to the label directions of the tank mix (ingredient) (partner)
- Phytophthora Blight – Apply this product in combination with labeled rates of a copper fungicide or with another fungicide labeled for Phytophthora Blight control.

CITRUS CROPS

Orange, Grapefruit, Kumquat, Lemon, Tangelo, Tangerine, Pummelo and other citrus crops

POME FRUITS

Apple, Crabapple, Loquat, Oriental Pear, Pear, Quince, Mayhaw and other pome fruits

- Use caution when selecting spray adjuvants. Select only those adjuvants which through prior experience do not affect fruit finish when combined with this product.
- Fire Blight – For suppression, apply 1-2 quarts of this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) at green tip through bloom Do not exceed 0.5% v/v. Following bloom,

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

this product can be applied at 2–4 quarts per acre (3 – 6 tbsp. per 1000 sq. ft.). For maximum control, use this product prior to infection events. During periods of rapid development and frequent infection periods, use spray intervals of 3–7 days.

- Apply in sufficient water to provide full coverage. For improved performance, use this product in a rotational program with copper or antibiotics registered for Fire Blight control such as but not limited to oxytetracycline or streptomycin.
- Proper orchard cultural practices are essential to eliminate Fire Blight-infected tissue from the orchard to assure good performance of any crop protection product. Remove and destroy dead and diseased wood from the orchard prior to and during the growing season.
- Scab – For suppression, apply 1-2 quarts of this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) at green tip and through bloom when environmental conditions become favorable for primary Scab development and repeat on a 7–10 day interval or as needed. Do not exceed 0.5% v/v. Use this product in a tank mix or rotational program with other fungicides labeled for Scab control. Following bloom, this product can be applied at 2–4 quarts per acre (3 – 6 tbsp. per 1000 sq. ft.).

Some sensitive tree fruit varieties have exhibited petal staining and/or necrosis after application of higher use rates. To minimize petal staining and/or necrosis:

- Use adjuvants that improve coverage, not penetration; follow the manufacturer's mixing instructions.
- Use adjuvants that through prior experience do not affect petal integrity when combined with this product.
- Apply 1-2 quarts of this product in 50–100 gallons (1 – 2.5 tbsp. per gallon) of water per acre (1.5 tbsp. in 1 gallon to 2.5 gallons of water per 1000 sq. ft.) in Pome Fruit, from 10% bloom to full bloom. Do not exceed 0.5% v/v.

STONE FRUITS

Apricot[†], Cherry (sweet and tart), Nectarine, Peach, Plum, Plumcot, Prune and other stone fruits

- Bacterial Blight – Apply this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) postharvest before fall rains.
- Brown Rot Blossom Blight – Begin application of this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) at early bloom, and repeat through petal fall on a 7-day interval or as needed.
- Powdery Mildew – Begin application of this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) at popcorn stage, and repeat on a 7-day interval or as needed. For improved performance, use this product in a tank mix or rotational program with other registered fungicides for powdery mildew control.
- Scab – Begin application of this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) at petal fall, and repeat on a 7–10-day interval or as needed. For improved performance, tank mix this product with another fungicide labeled for Scab control.
- For all other diseases – Begin application prior to disease development when environmental conditions and plant stage are conducive to rapid disease development, and repeat on a 7–10 day interval or as needed. Use in a tank mix or rotational program when disease conditions are severe.

[†]Some sensitive apricot varieties have exhibited fruit spotting as a result of application. Spray a test strip to confirm your variety is not susceptible to spotting before spraying.

Some sensitive tree fruit varieties have exhibited petal staining and/or necrosis after application of higher use rates. To minimize petal staining and/or necrosis:

- Use adjuvants that improve coverage, not penetration; follow the manufacturer's mixing instructions.
- Use adjuvants that through prior experience do not affect petal integrity when combined with this product.
- Apply 1 quart of this product in 50–100 gallons of water per acre (1.5 tbsp. in 1 gallon to 2.5 gallons of water per 1000 sq. ft.) in:
 - Cherries, from white bud (first white, popcorn) to full bloom,
 - Stone fruit, from 10% bloom to full bloom.

BERRIES (AND SMALL FRUIT)

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

Blueberry[†], Blackberry (all varieties), Cranberry, Currant, Elderberry, Gooseberry, Huckleberry, Juneberry, Ligonberry, Loganberry, Raspberry (red and black), Salal and cultivars and/or hybrids of these and other berries

Cranberry

Grape, Strawberry and other smallfruit

- Mummy Berry – Initiate application at bud break stage of development. Apply this product preventatively and repeat on a 7–10 day interval or as needed. For best performance, tank mix this product with other registered fungicides for Mummy Berry control.
- Botrytis Blight – Apply this product preventatively or when the first disease symptoms are visible and reapply every 7–14 days.
- Bacterial Canker – Apply this product prior to Fall rains and repeat applications during dormancy before spring growth. This product can be tank mixed with another registered fungicide for improved control of bacterial canker.
- Anthracnose Fruit Rot and Alternaria Fruit Rot on blueberries – Initiate application at green tip and continue applications on a 7–10 day interval.
- Anthracnose on strawberry– For suppression, apply this product preventatively in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) and repeat on a 7-day interval or as needed. For best performance, tank mix this product with other registered fungicides for Anthracnose control.

[†] Some sensitive blueberry varieties have exhibited fruit spotting as a result of application. Spray a test strip to confirm your variety is not susceptible to spotting before spraying. Do not exceed 1% v/v.

TREE NUT CROPS

Almond, Beech nut, Brazil nut, Butternut, Cashew, Chestnut, Chinquapin, Filbert, Hickory nut, Macadamia nut, Pecan, Pistachio, Walnut (Black and English)

Some tree nut varieties have exhibited petal staining and/or necrosis after application of higher use rates.

To minimize petal staining and/or necrosis:

- Use adjuvants that improve coverage, not penetration; follow the manufacturer's mixing instructions.
- Use adjuvants that through prior experience do not affect petal integrity when combined with this product.
- Apply 1 quart in 50 gallons or 2 quarts in 100 gallons of water per acre (1.5 tbsp. in 1 gallon or 3 tbsp. in 2.5 gallons of water per 1000 sq. ft.) from pink bud through bloom.

CEREAL GRAINS

Barley, Buckwheat, Grain Amaranth, Milo, Oat, Millets, Rice, Rye, Sorghum, Triticale, Wheat and other cereal grains

It is important to apply this product at the Feekes 4 to Feekes 10.5 stage to maximize yield. Apply this product preventatively or when the first disease symptoms appear. Repeat applications in 7–14-day intervals depending upon crop growth and disease pressure

Corn (Sweet Corn, Field Corn, Popcorn, Silage Corn, Seed Corn)

Apply this product preventatively starting at V1-V10 or VT or when the first disease symptoms appear. (Repeat applications on 7–10 day intervals depending upon crop growth and disease pressure.)

FORAGE, FODDER AND STRAW OF CEREAL GRAINS

Corn, Wheat, and any other cereal grain crop

GRASS FORAGE, FODDER, AND HAY

Bermuda grass, Bluegrass, Bromegrass, Fescue, Pasture and range grasses grown for hay or silage, Sudangrass, Timothy and other grass forage, fodder, and hay

NON-GRASS ANIMAL FEED

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

Alfalfa, Clover, Kudzu, Lespedeza, Lupin, Sainfoin, Trefoil, Vetch and other non-grass animal feed

HERBS/SPICES (FIELD AND GREENHOUSE)

OIL SEED CROPS (not including peanut or soybean)

Canola, Castor, Flax, Jojoba, Rapeseed, Safflower, Sesame, and Sunflower and other oil seeds

For white mold disease control: apply at 10% bloom with a second application 7-10 days later.

Cotton

For ground applications for foliar and boll rot disease control, apply this product preventatively in 15–40 gallons of water per acre (0.5 – 1 gallon of water per 1000 square feet) prior to disease development using sufficient volume for thorough coverage

STALK, STEM, AND LEAF PETIOLE VEGETABLES

Asparagus, Celery and other stalk, stem and leaf petiole vegetables

TROPICAL AND SUBTROPICAL FRUITS, EDIBLE

Olive and other tropical and subtropical fruits with edible peel

TROPICAL AND SUBTROPICAL FRUITS, INEDIBLE

Avocado, Banana, Kiwi, Mango, Papaya, Plantain, Pineapple, Pomegranate and other tropical and subtropical fruits with inedible peel

Sigatoka – Initiate applications when leaves first appear and repeat on a 7–10 day schedule. Apply in sufficient water by ground or air to obtain thorough coverage of foliage. For improved disease control, this product may be tank-mixed with oil or other fungicides registered for Sigatoka control at label rates

(Other crops [outside crop groups])

ARTICHOKE

HOPS

- Minimum spray volumes for hop growth stages are as follows:
- Emergence to Training: Apply 1–2 quarts this product per acre (1.5 – 3 tbsp. per 1000 sq. ft.) using a minimum spray volume of 20 gallons per acre (0.5 gallon per 1000 sq. ft.). Coverage will vary with the size of the vines and the type of spray equipment. Apply adequate spray volume to achieve complete spray coverage.
- Training to Wire-Touch: Apply 1–2 quarts this product per acre (1.5 – 3 tbsp. per 1000 sq. ft.) using a minimum spray volume of 50 gallons per acre (1 gallon of water per 1000 sq. ft.). Coverage will vary with the size of the vines and the type of spray equipment. Apply adequate spray volume to achieve complete spray coverage.
- Wire-Touch through Harvest: Apply 2–4 quarts (3 – 6 tbsp.) of this product using a minimum of 100 gallons of water per acre (2.5 gallons of water per 1000 sq. ft.). Higher water volumes may be necessary to achieve thorough coverage after side arms develop. Do not apply more than 4 quarts of product per acre (6 tbsp. per 1000 sq. ft.) per application. Apply adequate spray volume to achieve complete spray coverage. Use the higher rates when moderate to high disease pressure is present or expected.
- For control of downy mildew, tank mix this product with another fungicide labeled for Downy Mildew control and re-apply at a 7-day interval or according to the label directions of the tank mix (ingredient) (partner).

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

PEANUT

HEMP

QUINOA

SUGARCANE

CROTALARIA, SESSBANIA, KENAF

FLOWERING PLANTS

BEDDING PLANTS

GRASS GROWN FOR SEED

0.5–2.5 fluid ounces per 100 lbs. seed for SEED TREATMENT applications

ORNAMENTALS

SWITCHGRASS, MISCANTHUS

TOBACCO

For Target Spot: Apply this product at a rate of 2 quarts per acre in a minimum of 50 gallons of water per acre.

TURFGRASS AND ORNAMENTAL GRASSES: Bluegrass, Bentgrass, Bermudagrass, Dichondra, Fescue, Orchardgrass, *Poa annua*, Ryegrass, St. Augustine, Zoysia, mixtures

**1–3 fluid ounces per 1000 square feet in a minimum of 1.5 gallons of water for FOLIAR applications, or
3–8 pints per acre in a minimum of 50 gallons of water for FOLIAR applications**

This product aids in control of turf diseases and improves turf quality. For improved performance under moderate to severe disease pressure, reduce spray intervals or use this product in a tank mix or rotational program with other registered fungicides.

INTEGRATED PEST MANAGEMENT (IPM)

Many conventional fungicides have been tested in an IPM regime with REGALIA® Bioprotectant Concentrate with very satisfactory results. One of the major objectives of IPM has been to reduce the probability of disease resistance development to a particular active ingredient.

The alternate use of (1–2 sprays) followed by a conventional, registered fungicide (1–2 sprays) has been successfully used in many crops. In addition, the use of tank mixes with a conventional fungicide has also been successful.

Follow label instructions of the particular registered product: Do not exceed amounts or treatment intervals on the label.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

Pesticide Storage: Store in a cool, dry place. Avoid freezing.

Pesticide Disposal: To avoid wastes, use all material in this container by application according to label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local governments or by industry).

Container Handling (5 gallons or less): Non-refillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container $\frac{1}{4}$ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.

Container Handling (over 5 gallons): Non-refillable container. Do not reuse or refill this container Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container $\frac{1}{4}$ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.

Container Handling (refillable containers – 265 gallon tote):

Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10% full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times. When empty, return to point of sale or offer for recycling if available or reconditioning if appropriate.

Marrone Bio Innovations is a member of the Ag Container Recycling Council.

Visit <http://www.acrecycle.org/contact.html> for information on how to arrange pick-up of this empty pesticide container.

WARRANTY

To the extent consistent with applicable law, the seller makes no warranty, expressed or implied, of merchantability, fitness or otherwise concerning use of this product. To the extent permitted by applicable law, the user assumes all risks of use, storage or handling that are not in strict accordance with the accompanying directions.

Sublabel B: Professional Landscape Use

REGALIA® Bioprotectant Concentrate

A plant extract to boost the plants' defense mechanisms to protect against certain fungal and bacterial diseases, and to improve plant health.

Active ingredient: Extract of *Reynoutria sachalinensis* 5 %
Other ingredients: 95 %
Total 100 %

EPA Reg. No. 84059-3

EPA Est. No. xxxxx-xx-xxx

GROUP P5 FUNGICIDE

KEEP OUT OF REACH OF CHILDREN

CAUTION

FIRST AID	
IF SWALLOWED:	Call poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.
IF ON SKIN OR CLOTHING:	Take off contaminated clothing. Rinse skin immediately with plenty of water for 15–20 minutes. Call a poison control center or doctor for treatment advice.
IF INHALED:	Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth if possible. Call a poison control center or doctor for further treatment advice.
IF IN EYES:	Hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.
HOTLINE NUMBER	
Have the product container or label with you when calling a poison control center or doctor, or if going for treatment. You may also contact 1-800-222-1222 for emergency medical treatment information.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Causes moderate eye irritation. Avoid contact with eyes or clothing. Wear goggles or safety glasses. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Shoes plus socks
- Waterproof gloves
- Protective eyewear

Follow manufacturer's instructions for cleaning and maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENVIRONMENTAL HAZARDS

For terrestrial uses: do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater or rinsate.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exemptions pertaining to the statements on this label about personal protective equipment (PPE) and the restricted-entry interval (REI). The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated such as plants, soil or water is:

- Coveralls
- Waterproof gloves
- Shoes plus socks
- Protective eyewear

Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated. The REI does not apply when this product is used for seed treatment at planting or in hopper box treatments.

GENERAL INFORMATION

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

REGALIA® Bioprotectant Concentrate is an extract from the plant *Reynoutria sachalinensis* for use on ornamental plants, turf, and edible crops. REGALIA® Bioprotectant Concentrate applied to actively growing plants (see DIRECTIONS FOR USE) will help protect treated portions from certain plant diseases and will improve plant health. Plant health benefits often result in greater yields at harvest, especially when crops are stressed by pathogens or environmental conditions. Use REGALIA® Bioprotectant Concentrate as a preventative rather than a curative application. Apply prior to disease infestation to protect the growing leaf tissue, flowers and above ground fruit and vegetables. See specific information below for diseases controlled and use rates on ornamental plants, turf, and edible crops.

REGALIA® Bioprotectant Concentrate can be used in multiple application methods to control or suppress certain soil-borne or foliar diseases and to promote healthy plant growth. See below for specific information on diseases controlled and use rates.

MODE OF ACTION

The extract obtained from *Reynoutria sachalinensis* plant material contains bioactive compounds. The extract, when applied to the host plant, activates the plant's defense system to increase phenolics and antioxidants, and strengthen cell walls. This mode of action is classified as induced systemic resistance.

When applied at rates and timing for disease control, the induced resistance against important diseases provides translaminar activity, which takes place within one to two days of application. Repeat foliar applications per label instructions. Use REGALIA® Bioprotectant Concentrate, therefore, as a preventative treatment. In addition to foliar applications, REGALIA® Bioprotectant Concentrate can be used in multiple application methods as a plant dip, soil drench, in-furrow spray, or applied through drip irrigation to control or suppress certain soil-borne diseases and to promote healthy root growth.

When applied at rates and timing for plant health effects, the improved plant defense responses minimize the impacts of stress and disease, resulting in optimized yields at harvest. Applying Regalia® Bioprotectant Concentrate has been shown to increase leaf chlorophyll content and increase soluble protein content in some crops. These effects often lead to improved crop quality and/or yields.

MIXING AND APPLICATION INSTRUCTIONS

– SHAKE WELL PRIOR TO USE –

Mixing instructions: Prepare no more mixture than is required for the immediate operation. Agitate the solution continuously during mixing and application. Mechanical mixing is recommended for proper mixing of REGALIA® Bioprotectant Concentrate mixtures.

REGALIA® Bioprotectant Concentrate alone: Add ½ of the required amount of water to the mix tank. With the agitator running, add the REGALIA® Bioprotectant Concentrate to the mix tank. Continue agitation while adding the remainder of the water. Begin application of the solution after the REGALIA® Bioprotectant Concentrate has completely dispersed into the mix water. Maintain agitation until all the mixture has been applied.

REGALIA® Bioprotectant Concentrate + tank mixtures: Add ½–¾ of the required amount of water to the mix tank. Start the agitation before adding any tank mix ingredients. In general, tank mix ingredients should be added in this order: wettable powders, dry flowable formulations, liquid flowable formulations, and emulsifiable formulations such as REGALIA® Bioprotectant Concentrate. Always allow each tank mix ingredient to become completely dispersed before adding the next component. Maintain continuous agitation until all components have been dispersed and throughout the application process. After all components are completely dispersed add the remainder of the water. REGALIA® Bioprotectant Concentrate cannot be mixed with another product with a prohibition against mixing. Use of the tank mix must be in accordance with the most restrictive label limitations and precautions. **Do not pre-mix REGALIA® Bioprotectant Concentrate with any other tank mix component prior to adding to the spray tank.**

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

Note: When using REGALIA® Bioprotectant Concentrate in tank-mixtures, all products in water soluble packaging should be added to the tank before any other tank-mix ingredient, including REGALIA® Bioprotectant Concentrate. Allow the water-soluble packaging to completely dissolve and the product(s) to completely disperse before adding any other tank-mix ingredient to the tank.

Compatibility: Do not combine REGALIA® Bioprotectant Concentrate in the spray tank with pesticides, adjuvants, or fertilizers if there has been no previous experience or use of the combination to show it is physically compatible, effective, and non-injurious under your use conditions. REGALIA® Bioprotectant Concentrate is compatible with many commonly used pesticides, fertilizers, adjuvants, and surfactants, but has not been evaluated with all potential combinations. To ensure compatibility of the tank mix combinations, evaluate prior to use as follows: Using a suitable container, add the proportional amounts of product to water. Add wettable powders first, then water dispersible granules, then liquid flowables, and lastly, emulsifiable concentrates. Mix thoroughly and let stand for at least five minutes. If the combination stays mixed or can be remixed, it is physically compatible. Test the mix on a small portion of the crop to be treated to ensure that a phytotoxic response will not occur as a result of the application.

Application Instructions: REGALIA® Bioprotectant Concentrate is a micro-emulsion concentrate consisting of certain ingredients extracted from *Reynoutria sachalinensis*. Use 50-mesh nozzle screens or larger. Use higher water volumes with larger sized crops and extensive foliage to obtain thorough coverage.

See **FOLIAR AERIAL and FOLIAR GROUND APPLICATION** section for use directions.

See **BACKPACK/HANDHELD SPRAYER** section for use directions.

See **CHEMIGATION** section for use directions.

See **PRE-PLANT DIP** section for use directions.

See **SEED TREATMENT** section for use directions.

See **SOIL TREATMENT** section for use directions.

FOLIAR AERIAL APPLICATION INSTRUCTIONS

0.5–1 quart per acre for FOLIAR (AERIAL) applications

- (For aerial applications, apply this product in a minimum of (2 to 10) gallons of water per acre.)
- (Apply this product preventatively or when the first disease symptoms are visible and reapply every 7–14 days)
- (For improved performance, use this product in a tank mix or rotational program with other registered fungicides.) (Tank mix this product with other registered fungicides for improved disease control under (heavy) (high disease) pressure.)
- (Repeat applications at (5-14) (7-10) (7–14) day intervals) (depending upon crop growth and disease pressure)
- (Under moderate to heavy disease pressure, tank mix this product with another fungicide.)
- (Consult your local Extension Specialist or Crop Consultant regarding the optimum timing of fungicide applications)
- (For grasses including forage, fodder, hay, and cereals, and for non-grass animal feed:) (It is important to apply this product at the flag leaf stage to maximize yield.)
- (Increasing the amount of water applied per acre will improve product performance.)
- (Follow all instructions to reduce aerial drift.)

AERIAL DRIFT REDUCTION ADVISORY INFORMATION

GENERAL: Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions. Where states have more stringent regulations, they should be observed. Note: This section is advisory in nature and does not supersede the mandatory label requirements.

INFORMATION ON DROPLET SIZE: The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply droplets large enough to provide sufficient coverage and control. Applying

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

CONTROLLING DROPLET SIZE: Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets. Pressure – Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types, lower pressure produces larger droplets. When high flow rates are needed, use higher flow rate nozzles instead of increasing pressure. Number of Nozzles – Use the minimum number of nozzles that provide uniform coverage. Nozzle Orientation – Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential. Nozzle Type – Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

BOOM WIDTH: For aerial applications, the boom width must not exceed 75% of the wingspan or 90% of the rotary blade. Use upwind swath displacement and apply only when wind speed is 3–10 mph as measured by an anemometer. Use medium or coarser spray according to ASAE 572 definition for standard nozzles or VMD for spinning atomizer nozzles. If application includes a no-spray zone, do not release spray at a height greater than 10 feet above the ground or crop canopy.

APPLICATION HEIGHT: Do not make application at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

SWATH ADJUSTMENT: When applications are made with a crosswind, the swath will be displaced downward. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller drops, etc.).

WIND: Drift potential is lowest between wind speeds of 2–10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

TEMPERATURE AND HUMIDITY: When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

TEMPERATURE INVERSIONS: Do not apply during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small, suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

SENSITIVE AREAS: The pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g. when wind is blowing away from the sensitive areas). Do not allow spray to drift from the application site and contact people, structures people occupy at any time and the associated property, parks and recreation areas, non-target crops, aquatic and wetland areas, woodlands, pastures, rangelands, or animals.

FOLIAR (GROUND) APPLICATION USE DIRECTIONS

REGALIA® Bioprotectant Concentrate can be applied in most commonly-used ground application equipment, such as tractor-mounted boom, airblast, high clearance, hose-end, backpack, and other pressurized sprayers; or hand-held sprayers; foggers or mist blowers; water wheel and other drench applicators; and shank or other soil injection method. Thorough coverage is necessary to provide good disease control.

0.5–4 quarts per acre (0.5 – 6 tbsp. per 1000 sq. ft.) for FOLIAR (GROUND) applications

- (For ground applications,)(For foliar applications)(to optimize disease control and to maximize yields,) (apply ([specify volume])(of) (this product) (preventatively) in 15–100 gallons of water per acre) (0.5 – 2.5 gallons of water per 1000 sq. ft.) (by ground or aerial application) (prior to disease development using) (sufficient volume for thorough coverage.) (or when the first symptoms of disease are visible) (at 7 day spray intervals or) (as soon as the first symptoms of disease appear) (or when environmental conditions are conducive to rapid disease development.) (Begin application soon after emergence or transplant, and when conditions are conducive to disease development.) (when applied alone, or at 1–4 quarts per acre (1.5 – 6 tbsp. per 1000 sq. ft.) when tank mixed with another fungicide preventatively in a minimum of 50 gallons of water per acre (1 gallons per 1000 square feet))
- (Additional sprays beyond second cover may be needed on susceptible varieties, or when environmental conditions are conducive to rapid disease development. Use high label rate and shorter spray intervals when conditions are conducive to rapid disease development.) (Use shorter intervals when conditions are conducive to rapid disease development.)
- (Avoid excessive amounts of water that result in the runoff of spray material)
- (Continue sprays at 7-day intervals or as needed) (For foliar applications, mix this product concentrate with water at a concentration of 2–4 quarts per 100 gallons of water (1.5 – 2.5 tbsp. per gallon of water) when used alone or 1–4 quarts per 100 gallons of water (1 – 2.5 tbsp. per gallon of water) when tank mixed with another fungicide) (If necessary, repeat applications at a 7-day interval.)
- (Begin applications preventatively (before disease symptoms become visible) at the 4 to 6-leaf stage and treat at 7–10 day intervals as needed prior to sale or harvest. Spray until just before point of runoff.)
- (Increase water volume as plant size increases.)
- (Do not exceed 1.0% v/v of the applied solution.)
- (Apply this product preventatively or when the first disease symptoms are visible) (and reapply every 7–14 days.)
- (Repeat applications at (5-14) (7–10) (7-14) day intervals) (depending upon crop growth and disease pressure)
- (Under moderate to heavy disease pressure, tank-mix this product with another fungicide.)(When the plants are) (under high disease pressure, tank-mix this product with another fungicide for more effective control.)(Tank mix this product with other registered fungicides for improved disease control under heavy pressure.)(For improved performance,(apply 0.5–2 quarts per acre (0.5 – 3 tbsp. per 1000 sq. ft.) of) (use) this product in a tank mix (or rotational program) with other registered fungicides)(When tank mixed with other fungicides, use 1–2 quarts of REGALIA® Bioprotectant Concentrate per acre (1.5 – 3 tbsp. per 1000 sq. ft.)).(This product can be tank mixed at the lower rate with another registered fungicide under heavy disease pressure)
- (For trees and vines:)(Dilute applications: this product can be applied by ground equipment to (vine and)tree crops in dilute applications of 100–400 gallons of water per acre (2.5 – 9 gallons of water per 1000 square feet). Apply this product at a rate of 2–4 quarts per acre (3 – 6 tbsp. per 1000 sq. ft.) when applied alone, or at 1–4 quarts per acre (1.5 – 6 tbsp. per 1000 sq. ft.) when tank mixed with another fungicide. Avoid excessive amounts of water that result in the runoff of spray material)
- (Consult your local Extension Specialist or Crop Consultant regarding the optimum timing of fungicide applications.)
- (For grasses including cereals, forage, fodder, hay, and for non-grass animal feed:) (It is important to apply this product at the flag leaf stage to maximize yield.)
- (Apply product at 1-4 quarts per acre (1.5 – 6 tbsp. per 1000 sq. ft.) when applied in a tank mix, or at 2-4 quarts per acre (3 – 6 tbsp. per 1000 sq. ft.) when applied alone.)

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

- (For concentrated ground applications, apply this product at 0.5–1.5 quarts per acre (0.5 – 2.5 tbsp. per 1000 sq. ft.) in a minimum of 10 gallons of water per acre (1 quart of water per 1000 sq. ft.)
- (For plant health applications, apply (10-14 days) (two to three weeks) prior to cutting) (Foliar applications of Regalia to improve plant health can be made during the period from layby to contact sprays)
- (This product may be used to control certain diseases of container, bench, flat, plug, bed, or field-grown ornamentals in **shade-houses, outdoor nurseries, retail nurseries, and other landscape areas.**)

BACKPACK/HAND-HELD SPRAYER USE DIRECTIONS

The use rate for REGALIA® Bioprotectant Concentrate when applied alone or as an alternate spray in a backpack or hand-held sprayer is 1.5 – 2.5 tablespoons (Tbsp.) (1 – 1.5 fluid ounces [fl. oz.] per gallon of water (0.5 – 1.0% v/v dilution of REGALIA® Bioprotectant Concentrate) applied at 1 – 2.5 gallons per 1000 square feet (sq. ft.) (25 – 100 gallons of water per acre). When tank mixed with another fungicide, the use rate for REGALIA® Bioprotectant Concentrate in a backpack or hand-held sprayer is 0.5 – 2.5 tablespoons (0.5 – 1.5 fluid ounces) per gallon of water applied at 1 – 2.5 gallons per 1000 square feet (50 –100 gallons of water per acre). Use higher water volumes with larger sized crops and extensive foliage in order to secure thorough coverage. Do not use carrier volumes and/or adjuvants that create spray runoff or drip-accumulation at the base of fruit or on the harvested commodity. See specific application recommendations pertaining to each crop for additional details.

Use rate for REGALIA® Bioprotectant Concentrate

	Tablespoons REGALIA® Bioprotectant Concentrate per Gallon of Water	Fluid Ounces REGALIA® Bioprotectant Concentrate per Gallon of Water	v/v Dilution of REGALIA® Bioprotectant Concentrate	Applied (diluted) Gallons per 1,000 sq. ft.
Applied alone or as an alternate spray	1.5 – 2.5	1 – 1.5	0.5 – 1.0% v/v	1 – 2.5
Tank mixed with another fungicide	0.5 – 2.5	0.5 – 1.5	0.25 – 1.0% v/v	1 – 2.5

CHEMIGATION USE DIRECTIONS

(For control of foliar diseases and plant health apply this product through sprinkler center pivot sprinkler systems, lateral move, end tow, side (wheel) roll, traveler, solid set, hand moved. Do not use reclaimed water for application of this product.)

(For control of soil-borne or below ground diseases and plant health apply this product through furrow irrigation, injection into water stream, flood (basin), border or drip (trickle) irrigation systems. Do not use reclaimed water for application of this product.)

1–4 quarts per acre (1.5 – 6 tbsp. per 1000 sq. ft.) for CHEMIGATION applications

- For chemigation applications (for improved plant growth) (and suppression of soil-borne diseases), apply this product through (drip) irrigation immediately after transplant and at 14-day intervals or begin 14 days after transplant when soil drench applications are used.

Spray preparation

First prepare a suspension of REGALIA® Bioprotectant Concentrate in a mix tank. Fill tank ½ to ¾ the desired amount of water. Start mechanical or hydraulic agitation. Add the required amount of REGALIA® Bioprotectant Concentrate, and then the remaining volume of water. Then set the irrigation system to deliver a minimum of 0.1 to 0.3 inch of water per acre. Start irrigation system and uniformly inject the suspension of REGALIA® Bioprotectant Concentrate into the irrigation water line so as to deliver the desired rate per acre. Inject the suspension of REGALIA® Bioprotectant Concentrate with a positive displacement pump into the main line after the filter, and ahead of a right

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

angle turn to insure adequate mixing. Any questions on calibration should be directed to your State Extension Service Specialists, to equipment manufacturers or other experts.

Do not combine REGALIA® Bioprotectant Concentrate with pesticides, surfactants or fertilizers for application through chemigation equipment unless prior experience has shown the combination physically compatible, effective and non-injurious under conditions of use. REGALIA® Bioprotectant Concentrate has not been fully evaluated for compatibility with all adjuvants or surfactants. Conduct a spray compatibility test if a mixture with adjuvants or surfactants is planned.

CHEMIGATION

General Requirements –

- 1) Apply this product only through a drip or trickle system or center pivot sprinkler system, lateral move, end tow, side (wheel) roll, traveler, solid set, hand move, flood (basin), furrow, border or drip (trickle) irrigation systems.
- 2) Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.
- 3) If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.
- 4) Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.
- 5) A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Application Instructions for All Types of Chemigation –

- 1) Remove scale, pesticide residues, and other foreign matter from the chemical supply tank and entire injector system. Flush with clean water. Failure to provide a clean tank, void of scale or residues may cause product to lose effectiveness or strength.
- 2) Determine the treatment rates as indicated in the directions for use and make proper dilutions. Product can be applied continuously or at any time during the water application.
- 3) Prepare a solution in the chemical tank by filling the tank with the required water and then adding product as required
- 4) The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- 5) The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- 6) The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
- 7) Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Specific Requirements for Chemigation Systems Connected to Public Water Systems –

- 1) Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
- 2) Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

(air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

- 3) Do not apply when wind speed favors drift beyond the area intended for treatment.

Specific Requirements for Sprinkler Chemigation –

- 1) The system must contain a functional check valve, vacuum relief valve and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
- 2) The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
- 3) Do not apply when wind speed favors drift beyond the area intended for treatment.

Specific Requirements for Flood (Basin), Furrow and Border Chemigation –

- 1) Systems using a gravity flow pesticide dispensing system must meter the pesticide into the water at the head of the field and downstream of a hydraulic discontinuity such as a drop structure or weir box to decrease potential for water source contamination from backflow if water flow stops.
- 2) The systems utilizing a pressurized water and pesticide injection system must meet the following requirements:
 - a. The system must contain a functional check valve, vacuum relief valve and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
 - b. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Specific Requirements for Drip (Trickle) Chemigation –

- 1) The system must contain a functional check valve, vacuum relief valve and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
- 2) The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

PRE-PLANT DIP USE DIRECTIONS

Apply REGALIA® Bioprotectant Concentrate as a pre-plant dip for improved plant health and suppression of certain soil-borne diseases.

1–4 quarts per 100 gallons (1 – 2.5 tbsp. per gallon) of water for PLANT DIP (bare root) applications

- For plant dip applications for improved plant growth and suppression of soil-borne diseases, apply this product in a 0.25–0.5 % v/v suspension (1–4 quarts of this product per 100 gallons (or 1 – 2.5 tbsp. per gallon) of water as a pre-plant dip immediately prior to transplanting.

SEED TREATMENT USE DIRECTIONS

REGALIA® Bioprotectant Concentrate can be applied as a seed (or seed piece) dressing for suppression of soil-borne diseases to improve early-season root growth. REGALIA® Bioprotectant Concentrate may be applied with other registered seed treatment insecticides and fungicides through standard slurry- or mist-type commercial seed treatment equipment. (REGALIA® Bioprotectant Concentrate can also be used in on-farm hopper-box or planter-box treatments.)

If using REGALIA® Bioprotectant Concentrate in a tank mixture with other seed treatment products, observe all directions for use, crops/sites, use rates, dilution ratios, precautions, and limitations which appear on the tank-mix ingredient label. Do not exceed label rates and the most restrictive label precautions and limitations must be followed. Do not mix this product with any product which prohibits such mixing.

0.5–15 fluid ounces per 100 lbs. seed for SEED TREATMENT applications

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

- For suppression of soil-borne diseases, apply this product as a seed treatment at the rate of 0.5–15 fl. oz. per 100 lbs. seed.

(Do not apply this product through any type of irrigation system.)

SOIL TREATMENT USE DIRECTIONS

REGALIA® Bioprotectant Concentrate can be applied by soil drench or in-furrow spray to improve plant health and to protect against certain soil-borne diseases.

In general, REGALIA® Bioprotectant Concentrate can be applied by the following methods, unless specified differently in the SELECTED CROPS section:

Soil Drench Applications:

1–3 quarts per 100 gallons (1 – 2 tbsp. per gallon) of water for SOIL DRENCH applications

- For soil drench applications, apply this product at a concentration of 1–3 quarts per 100 gallons (1 – 2 tbsp. per gallon) of water, and at a sufficient rate to thoroughly soak the growing media and root zone. Make an initial application of this product during or shortly after transplant to reduce transplant shock, suppress soil-borne diseases and improve root growth. (Multiple drench applications can be made on a 10–14 day interval.)

In-Furrow, Shanked-In and Injected Applications:

(REGALIA® Bioprotectant Concentrate can be shanked-in or injected into the soil alone, or with most types of liquid nutrients.)

0.5–4 quarts per acre or 1–10 fluid ounces per 1000 ft. row for IN-FURROW applications

- For in-furrow applications, at planting apply this product as an in-furrow spray at the rate of 0.5–4 quarts per acre or 1–10 fluid ounces per 1000 feet of row according to the chart (in the SOIL TREATMENT USE DIRECTIONS section)(below). Apply this product in 5–15 gallons of water so as the spray is directed into the seed furrow just before the seeds are covered.

Rate Per Acre	In-Furrow Application Rates Product per 1000 ft. row (fl. oz.)

FOR USE ON THE FOLLOWING CROPS FOR CONTROL OR SUPPRESSION OF (THE FOLLOWING) (DISEASES) (PATHOGENS)(PESTS)

The use rate for REGALIA® Bioprotectant Concentrate when applied alone or as an alternate spray is 2–4 quarts per 100 gallons (1.5 – 2.5 tbsp. per gallon) of water (0.5–1.0% v/v dilution of REGALIA® Bioprotectant Concentrate) applied at 15–100 gallons of water per acre (0.5 - 2.5 gallons per 1000 square feet). When tank mixed with another fungicide, the use rate for REGALIA® Bioprotectant Concentrate is 1–4 quarts in 100 gallons (1 – 2.5 tbsp. per gallon) of water applied at 15–100 gallons of water per acre (0.5 – 2.5 gallons per 1000 square feet). Use higher water volumes with larger sized crops and extensive foliage in order to secure thorough coverage. Do not use carrier

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

volumes and/or adjuvants that create spray runoff or drip-accumulation at the base of fruit or on the harvested commodity. See specific application recommendations pertaining to each crop for additional details.

(This product can be used to control certain diseases of container, bench, flat, plug, bed or field-grown ornamentals and edible crops in shade-houses, outdoor nurseries, retail nurseries and other landscape areas. For application on the crops and diseases listed, the recommended use rate for REGALIA® Bioprotectant Concentrate is 2–4 quarts in 100 gallons (1.5 – 2.5 tbsp. per gallon) of water (0.5–1.0% v/v dilution of REGALIA® Bioprotectant Concentrate) sprayed until just before point of runoff. When tank mixed with another fungicide, the use rate for REGALIA® Bioprotectant Concentrate is 1–4 quarts in 100 gallons (1 – 2.5 tbsp. per gallon) of water. Repeat at 7–14-day intervals as needed. See specific application recommendations for each crop for additional details. (Keep relative humidity below 70% to avoid risk of phytotoxicity.) (Since it is not possible to test all ornamental species or varieties, test Regalia® Bioprotectant Concentrate on a few plants prior to large-scale usage.)

- Yellow Patch (*Rhizoctonia cerealis*)
- Yellow Tuft/Downy Mildew
(*Sclerophthora macrospora*)
- Zoysia Patch (*Rhizoctonia solani*)

Pre-harvest Interval (PHI) = 0 days

ROOT, TUBER AND CORM CROPS

Potato, Beet, Carrot, Cassava, Ginger, Ginseng, Horseradish, Radish, Sugar beet, Sweet Potato, Turnip (including those for seed production) and other root and tuber crops

For suppression of Early Blight, Black Root Rot/Black Crown Rot, and Late Blight, begin application of this product in 25–100 gallons of water per acre (0.5 – 2.5 gallons of water per 1000 square feet) soon after emergence when conditions are conducive to disease development. Repeat on a 5–7-day interval or as needed. For improved performance, use this product in a tank mix with other registered fungicides.

1-16 fl oz. per 100 pounds of seed pieces for SEED PIECE DIP applications

- For seed piece dip applications for improved plant growth and suppression of soil-borne diseases, apply this product to seed pieces prior to planting.

LEAVES OF ROOT AND TUBER VEGETABLES

Beet, Chervil, and other leaves of roots and tubers

BULB VEGETABLES

Onion (Bulb and Green), Garlic, Leek, Shallot and other bulb vegetables

LEAFY VEGETABLE CROPS (except *Brassica* vegetables)

Arugula, Celery, Cilantro, Corn Salad, Cress, Dandelion, Dock, Edible Chrysanthemum, Endive, Head Lettuce, Leaf Lettuce, Parsley, Purslane, Radicchio, Rhubarb, Spinach, Swiss Chard, Turnip, Watercress and other leafy vegetable crops

- West of the Rocky Mountains – For aerial applications, apply this product at 0.5–1.5 quarts per acre in a minimum of 10 gallons of water per acre
- East of the Rocky Mountains – For aerial applications, apply this product at 0.5–1 quarts per acre in a minimum of 5 gallons of water per acre.
- For California – For aerial application apply REGALIA® Bioprotectant Concentrate at 1–3 pints per acre in 10–20 gallons of water per acre.

Restrictions:

Do not apply REGALIA® Bioprotectant Concentrate when extended/unseasonably cold or cold and cloudy conditions are expected. Regalia should **not** be applied when night-time temperatures will fall below 45°F and relative humidity is predicted to be above 80%. Applications during daylight hours are preferred over night-time applications.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

BRASSICAS (COLE) LEAFY VEGETABLES

Broccoli, Broccoli Rabe, Brussels Sprouts, Cabbage, Chinese Broccoli, Chinese Cabbage (Bok Choy), Chinese Cabbage (Napa), Chinese Mustard Cabbage (Gai Choy), Cauliflower, Cavalo, Collards, Kale, Kohlrabi, Mizuna, Mustard Greens, Mustard Spinach, Rape Greens, and other cole crops

LEGUME VEGETABLES, succulent or dried (not including soybeans and peanuts)(not including peanuts)

Chick Peas, Dry Beans, Green Beans, Lentils, Lima Beans, Peas, Shell Beans, Snap Beans, Split Peas (including those grown for seed or oil production), Soybeans (and other legume vegetables)

To maximize activity against *Sclerotinia* white mold in soybeans, the best timing would be V3 to R3 and should be tank mixed with a fungicide partner also labeled for white mold activity.

Repeat applications on 7–10 day intervals depending upon crop growth and disease pressure.

FOLIAGE OF LEGUME VEGETABLES

Garden peas and other foliage of legume vegetables

FRUITING VEGETABLES

Tomato, Pepper, Eggplant, Ground Cherry, Okra, Tomatillo and other fruiting vegetables

- Phytophthora Blight – Apply this product in combination with labeled rates of a copper fungicide (or with another fungicide labeled for Phytophthora Blight control).

CUCURBITS

Includes all types and hybrids of: Acorn squash, Balsam apple, Balsam pear, Bitter melon, Butternut squash, Calabaza, Cantaloupe, Casaba, Chayote, Chinese cucumber, Chinese okra, Chinese waxgourd, Citron melon, Crenshaw melon, Crookneck squash, Cucumber, Cucuzza, Gherkin, Golden pershaw melon, Honeydew melon, Honey balls, Hubbard squash, Hyotan, Mango melon, Persian melon, Pineapple melon, Pumpkin, Santa Claus melon, Scallop squash, Snake melon, Spaghetti squash, Straightneck squash, Vegetable marrow, Watermelon, Zucchini and other cucurbits

- When cucurbits are under high disease conditions, use the shorter spray interval.
- Downy Mildew – Tank mix this product with another fungicide labeled for Downy Mildew control and re-apply at a 7-day interval or according to the label directions of the tank mix (ingredient) (partner)
- Phytophthora Blight – Apply this product in combination with labeled rates of a copper fungicide or with another fungicide labeled for Phytophthora Blight control.

CITRUS CROPS

Orange, Grapefruit, Kumquat, Lemon, Tangelo, Tangerine, Pummelo and other citrus crops

POME FRUITS

Apple, Crabapple, Loquat, Oriental Pear, Pear, Quince, Mayhaw and other pome fruits

- Use caution when selecting spray adjuvants. Select only those adjuvants which through prior experience do not affect fruit finish when combined with this product.
- Fire Blight – For suppression, apply 1-2 quarts of this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) at green tip through bloom Do not exceed 0.5% v/v. Following bloom, this product can be applied at 2–4 quarts per acre (3 – 6 tbsps. per 1000 sq. ft.). For maximum control, use this product prior to infection events. During periods of rapid development and frequent infection periods, use spray intervals of 3–7 days.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

- Apply in sufficient water to provide full coverage. For improved performance, use this product in a rotational program with copper or antibiotics registered for Fire Blight control such as but not limited to oxytetracycline or streptomycin.
- Proper orchard cultural practices are essential to eliminate Fire Blight-infected tissue from the orchard to assure good performance of any crop protection product. Remove and destroy dead and diseased wood from the orchard prior to and during the growing season.
- Scab – For suppression, apply 1-2 quarts of this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) at green tip and through bloom when environmental conditions become favorable for primary Scab development and repeat on a 7–10 day interval or as needed. Do not exceed 0.5% v/v. Use this product in a tank mix or rotational program with other fungicides labeled for Scab control. Following bloom, this product can be applied at 2–4 quarts per acre (3 – 6 tbsps. per 1000 sq. ft.).

Some sensitive tree fruit varieties have exhibited petal staining and/or necrosis after application of higher use rates. To minimize petal staining and/or necrosis:

- Use adjuvants that improve coverage, not penetration; follow the manufacturer's mixing instructions.
- Use adjuvants that through prior experience do not affect petal integrity when combined with this product.
- Apply 1-2 quarts of this product in 50–100 gallons (1 – 2.5 tbsps. per gallon) of water per acre (1.5 tbsps. in 1 gallon to 2.5 gallons of water per 1000 sq. ft.) in Pome Fruit, from 10% bloom to full bloom. Do not exceed 0.5% v/v.

STONE FRUITS

Apricot[†], Cherry (sweet and tart), Nectarine, Peach, Plum, Plumcot, Prune and other stone fruits

- Bacterial Blight – Apply this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) postharvest before fall rains.
- Brown Rot Blossom Blight – Begin application of this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) at early bloom, and repeat through petal fall on a 7-day interval or as needed.
- Powdery Mildew – Begin application of this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) at popcorn stage, and repeat on a 7-day interval or as needed. For improved performance, use this product in a tank mix or rotational program with other registered fungicides for powdery mildew control.
- Scab – Begin application of this product in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) at petal fall, and repeat on a 7–10-day interval or as needed. For improved performance, tank mix this product with another fungicide labeled for Scab control.
- For all other diseases – Begin application prior to disease development when environmental conditions and plant stage are conducive to rapid disease development, and repeat on a 7–10 day interval or as needed. Use in a tank mix or rotational program when disease conditions are severe.

[†]Some sensitive apricot varieties have exhibited fruit spotting as a result of application. Spray a test strip to confirm your variety is not susceptible to spotting before spraying.

Some sensitive tree fruit varieties have exhibited petal staining and/or necrosis after application of higher use rates. To minimize petal staining and/or necrosis:

- Use adjuvants that improve coverage, not penetration; follow the manufacturer's mixing instructions.
- Use adjuvants that through prior experience do not affect petal integrity when combined with this product.
- Apply 1 quart of this product in 50–100 gallons of water per acre (1.5 tbsps. in 1 gallon to 2.5 gallons of water per 1000 sq. ft.) in:
 - Cherries, from white bud (first white, popcorn) to full bloom,
 - Stone fruit, from 10% bloom to full bloom.

BERRIES (AND SMALL FRUIT)

Blueberry[†], Blackberry (all varieties), Cranberry, Currant, Elderberry, Gooseberry, Huckleberry, Juneberry, Ligonberry, Loganberry, Raspberry (red and black), Salal and cultivars and/or hybrids of these and other berries
Cranberry

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

Grape, Strawberry and other smallfruit

- Mummy Berry – Initiate application at bud break stage of development. Apply this product preventatively and repeat on a 7–10 day interval or as needed. For best performance, tank mix this product with other registered fungicides for Mummy Berry control.
- Botrytis Blight – Apply this product preventatively or when the first disease symptoms are visible and reapply every 7–14 days.
- Bacterial Canker – Apply this product prior to Fall rains and repeat applications during dormancy before spring growth. This product can be tank mixed with another registered fungicide for improved control of bacterial canker.
- Anthracnose Fruit Rot and Alternaria Fruit Rot on blueberries – Initiate application at green tip and continue applications on a 7–10 day interval.
- Anthracnose on strawberry– For suppression, apply this product preventatively in 50–100 gallons of water per acre (1 – 2.5 gallons of water per 1000 square feet) and repeat on a 7-day interval or as needed. For best performance, tank mix this product with other registered fungicides for Anthracnose control.

[†] Some sensitive blueberry varieties have exhibited fruit spotting as a result of application. Spray a test strip to confirm your variety is not susceptible to spotting before spraying. Do not exceed 1% v/v.

TREE NUT CROPS

Almond, Beech nut, Brazil nut, Butternut, Cashew, Chestnut, Chinquapin, Filbert, Hickory nut, Macadamia nut, Pecan, Pistachio, Walnut (Black and English)

Some tree nut varieties have exhibited petal staining and/or necrosis after application of higher use rates.

To minimize petal staining and/or necrosis:

- Use adjuvants that improve coverage, not penetration; follow the manufacturer's mixing instructions.
- Use adjuvants that through prior experience do not affect petal integrity when combined with this product.
- Apply 1 quart in 50 gallons or 2 quarts in 100 gallons of water per acre (1.5 tbsp. in 1 gallon or 3 tbsp. in 2.5 gallons of water per 1000 sq. ft.) from pink bud through bloom.

CEREAL GRAINS

Barley, Buckwheat, Grain Amaranth, Milo, Oat, Millets, Rice, Rye, Sorghum, Triticale, Wheat and other cereal grains

It is important to apply this product at the Feekes 4 to Feekes 10.5 stage to maximize yield. Apply this product preventatively or when the first disease symptoms appear. Repeat applications in 7–14-day intervals depending upon crop growth and disease pressure

Corn (Sweet Corn, Field Corn, Popcorn, Silage Corn, Seed Corn)

Apply this product preventatively starting at V1-V10 or VT or when the first disease symptoms appear. (Repeat applications on 7–10 day intervals depending upon crop growth and disease pressure.)

FORAGE, FODDER AND STRAW OF CEREAL GRAINS

Corn, Wheat, and any other cereal grain crop

GRASS FORAGE, FODDER, AND HAY

Bermuda grass, Bluegrass, Bromegrass, Fescue, Pasture and range grasses grown for hay or silage, Sudangrass, Timothy and other grass forage, fodder, and hay

NON-GRASS ANIMAL FEED

Alfalfa, Clover, Kudzu, Lespedeza, Lupin, Sainfoin, Trefoil, Vetch and other non-grass animal feed

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

HERBS/SPICES (FIELD AND GREENHOUSE)

OIL SEED CROPS (not including peanut or soybean)

Canola, Castor, Flax, Jojoba, Rapeseed, Safflower, Sesame, and Sunflower and other oil seeds

For white mold disease control: apply at 10% bloom with a second application 7-10 days later.

Cotton

For ground applications for foliar and boll rot disease control, apply this product preventatively in 15–40 gallons of water per acre (0.5 – 1 gallon of water per 1000 square feet) prior to disease development using sufficient volume for thorough coverage

STALK, STEM, AND LEAF PETIOLE VEGETABLES

Asparagus, Celery and other stalk, stem and leaf petiole vegetables

TROPICAL AND SUBTROPICAL FRUITS, EDIBLE

Olive and other tropical and subtropical fruits with edible peel

TROPICAL AND SUBTROPICAL FRUITS, INEDIBLE

Avocado, Banana, Kiwi, Mango, Papaya, Plantain, Pineapple, Pomegranate and other tropical and subtropical fruits with inedible peel

Sigatoka – Initiate applications when leaves first appear and repeat on a 7–10 day schedule. Apply in sufficient water by ground or air to obtain thorough coverage of foliage. For improved disease control, this product may be tank-mixed with oil or other fungicides registered for Sigatoka control at label rates

(Other crops [outside crop groups])

ARTICHOKE

HOPS

- Minimum spray volumes for hop growth stages are as follows:
- Emergence to Training: Apply 1–2 quarts this product per acre (1.5 – 3 tbsp. per 1000 sq. ft.) using a minimum spray volume of 20 gallons per acre (0.5 gallon per 1000 sq. ft.). Coverage will vary with the size of the vines and the type of spray equipment. Apply adequate spray volume to achieve complete spray coverage.
- Training to Wire-Touch: Apply 1–2 quarts this product per acre (1.5 – 3 tbsp. per 1000 sq. ft.) using a minimum spray volume of 50 gallons per acre (1 gallon of water per 1000 sq. ft.). Coverage will vary with the size of the vines and the type of spray equipment. Apply adequate spray volume to achieve complete spray coverage.
- Wire-Touch through Harvest: Apply 2–4 quarts (3 – 6 tbsp.) of this product using a minimum of 100 gallons of water per acre (2.5 gallons of water per 1000 sq. ft.). Higher water volumes may be necessary to achieve thorough coverage after side arms develop. Do not apply more than 4 quarts of product per acre (6 tbsp. per 1000 sq. ft.) per application. Apply adequate spray volume to achieve complete spray coverage. Use the higher rates when moderate to high disease pressure is present or expected.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

- For control of downy mildew, tank mix this product with another fungicide labeled for Downy Mildew control and re-apply at a 7-day interval or according to the label directions of the tank mix (ingredient) (partner).

PEANUT

HEMP

SUGARCANE

CROTALARIA, SESSBANIA, KENAF

FLOWERING PLANTS

BEDDING PLANTS

GRASS GROWN FOR SEED

0.5–2.5 fluid ounces per 100 lbs. seed for SEED TREATMENT applications

ORNAMENTALS

SWITCHGRASS, MISCANTHUS

TOBACCO

For Target Spot: Apply this product at a rate of 2 quarts per acre in a minimum of 50 gallons of water per acre.

INTEGRATED PEST MANAGEMENT (IPM)

Many conventional fungicides have been tested in an IPM regime with REGALIA® Bioprotectant Concentrate with very satisfactory results. One of the major objectives of IPM has been to reduce the probability of disease resistance development to a particular active ingredient.

The alternate use of (1–2 sprays) followed by a conventional, registered fungicide (1–2 sprays) has been successfully used in many crops. In addition, the use of tank mixes with a conventional fungicide has also been successful.

Follow label instructions of the particular registered product: Do not exceed amounts or treatment intervals on the label.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

Pesticide Storage: Store in a cool, dry place. Avoid freezing.

Pesticide Disposal: To avoid wastes, use all material in this container by application according to label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local governments or by industry).

Container Handling (5 gallons or less): Non-refillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container $\frac{1}{4}$ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.

Container Handling (over 5 gallons): Non-refillable container. Do not reuse or refill this container Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container $\frac{1}{4}$ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.

Container Handling (refillable containers – 265 gallon tote):

Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10% full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times. When empty, return to point of sale or offer for recycling if available or reconditioning if appropriate.

Marrone Bio Innovations is a member of the Ag Container Recycling Council.

Sublabel C: Home & Garden Use

REGALIA® Bioprotectant Concentrate

A plant extract to boost the plants’ defense mechanisms to protect against certain fungal and bacterial diseases, and to improve plant health.

Active ingredient: Extract of *Reynoutria sachalinensis*..... 5 %
 Other ingredients: 95 %
 Total 100 %

EPA Reg. No. 84059-3

EPA Est. No. 085970-FL-001

EPA Est. No. 084059-MI-001

KEEP OUT OF REACH OF CHILDREN

CAUTION

See back/side/top/bottom [panel/label] for additional precautionary statements.

FIRST AID	
IF SWALLOWED:	Call poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.
IF ON SKIN OR CLOTHING:	Take off contaminated clothing. Rinse skin immediately with plenty of water for 15–20 minutes. Call a poison control center or doctor for treatment advice.
IF INHALED:	Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth if possible. Call a poison control center or doctor for further treatment advice.
IF IN EYES:	Hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.
HOTLINE NUMBER	
Have the product container or label with you when calling a poison control center or doctor, or if going for treatment. You may also contact 1-800-222-1222 for emergency medical treatment information.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS – CAUTION: Causes moderate eye irritation. Avoid contact with eyes, skin or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove contaminated clothing and wash before reuse.

ENVIRONMENTAL HAZARDS: To protect the environment, do not allow pesticide to enter or run off into storm drains, drainage ditches, gutters or surface waters. Applying this product in calm weather when rain is not predicted for the next 24 hours will help to ensure that wind or rain does not blow or wash pesticide off the treatment area. Rinsing application equipment over the treated area will help avoid runoff to water bodies or drainage systems.

DIRECTIONS FOR USE

It is a violation of Federal law to apply this product in a manner inconsistent with its labeling.

OPTION 1

HOME AND GARDEN USE DIRECTIONS

REGALIA® Bioprotectant Concentrate is a broad spectrum (biological/bio) fungicide used for the control or suppression of a broad range of foliar diseases. REGALIA® Bioprotectant Concentrate may be used on vegetable crops, roses, fruits, nuts, flowers, bedding plants, foliage, houseplants, trees and shrubs located in residential landscapes. REGALIA® Bioprotectant Concentrate can be applied up to and on the day of harvest on all fruits and vegetables.

WHEN TO USE

For best results, apply REGALIA® Bioprotectant Concentrate prior to disease development or at the first sign of diseases and continue applying on a 7-day schedule or as needed.

BEFORE YOU USE

Read and follow these directions when using:

Do not allow spray to drift from application site.

Use only with pressurized hand-held sprayers or spray trigger bottles.

Do not allow spray mixture to stand overnight or for prolonged periods.

REGALIA® Bioprotectant Concentrate can be applied in commonly used pressurized hand-held sprayers, spray trigger bottles and hose-end sprayers.

HOW TO USE FOR HAND-HELD SPRAYERS AND SPRAY TRIGGER BOTTLES

Shake well before use.

Fill sprayer or bottle with appropriate amount of water and concentrate.

Mix the spray solution thoroughly.

Keep the spray solution agitated during application.

HOW TO USE FOR HOSE-END SPRAYERS

Shake well before use.

Follow hose-end sprayer instructions to determine how to fill, set dial, clean and disconnect from hose.

Set dial on sprayer to deliver rate as directed below.

HOW MUCH TO USE FOR ALL APPLICATIONS:

1 fluid ounce (2 TBSP) of REGALIA® Bioprotectant Concentrate per gallon of water.

Spray plants to complete wetness, covering both top and bottom leaf surfaces to ensure complete coverage.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

Some pesticides (garden care products)(plant protection products) can cause phytotoxic effects ranging from slight burning or browning of leaves to distorted leaves, fruit, flowers or stems. Damage symptoms may vary with the type of plant that has been treated. It is impossible to test all plant species for phytotoxicity. To assure that the plants to be treated are not sensitive to the treatment, apply a small amount of the product to a few leaves or the above ground portion of the plant and check back in 2–4 days for signs of phytotoxicity. Use product according to label directions.

OPTION 2

WHEN TO USE

For best results, apply REGALIA® Bioprotectant Concentrate prior to disease development or at the first sign of diseases and continue applying on a 7-day schedule or as needed.

[As a preventative, apply every 7 to 14 days until the potential for disease has passed. To control disease that is already present, apply on a 7-day schedule until disease symptoms are gone. Then continue spraying every 14 days to prevent disease recurrence.]

BEFORE YOU USE

Read label [before use]

Do not allow spray to drift from application site.

Use only with pressurized hand-held sprayers/[hand-held] trigger-spray bottles/hose-end sprayers.

Do not allow spray mixture to stand overnight or for prolonged periods.

HOW TO USE [for pressurized hand-held sprayers/[hand-held] trigger-sprayers]

Shake [concentrate] before use

Fill sprayer with 1fl.oz. (2 TBSP) of REGALIA® Bioprotectant Concentrate per gallon of water [(or 1 1/2 tsp. per 32 fl. oz. of water)]

Mix thoroughly

Spray both tops and bottoms of leaves/leaf surfaces [thoroughly] until dripping wet.

Shake sprayer occasionally during application [to keep product well mixed]

HOW TO USE [for hose-end sprayers]

Shake [concentrate] before use

Follow hose-end sprayer instructions to determine how to fill, set dial, clean and disconnect from hose.

Set dial on sprayer to deliver 1fl.oz. (2 TBSP) of REGALIA® Bioprotectant Concentrate per gallon of water

Spray both tops and bottoms of leaves/leaf surfaces [thoroughly] until dripping wet.

HOW TO USE [for Pre-Plant Dip Applications]

REGALIA® Bioprotectant Concentrate can be applied as a pre-plant dip for improved health and suppression of certain soil-borne diseases when transplanting. Shake [concentrate] before use. Mix 1oz. (2TBSP) REGALIA® Bioprotectant Concentrate per gallon of water, briefly submerge roots or plugs in mixture (ensuring full coverage, then remove) before transplanting.

HOW TO USE [for Soil Drench Applications]

Shake [concentrate] before use. Mix REGALIA® Bioprotectant Concentrate at a concentration of 1oz (2TBSP) per gallon of water and apply at a sufficient rate to thoroughly soak the soil and root zone. Make an initial application of REGALIA® Bioprotectant Concentrate during or shortly after transplant to reduce transplant shock, suppress soil-borne diseases and improve root growth. Multiple drench applications can be made on a 10-14-day interval.

[HOW IT WORKS/MODE OF ACTION]

REGALIA® Bioprotectant Concentrate contains an extract from the plant *Reynoutria sachalinensis*, that when applied according to label directions triggers an immune response that protects treated plants from numerous diseases. The induced resistance provided by REGALIA® is not systemic, therefore thorough coverage of above-ground plant parts

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

is important to achieving optimal control. Repeat foliar applications at 7–14 day intervals to maintain induction and to protect new plant growth. Use REGALIA® Bioprotectant Concentrate as a preventative treatment prior to the development of disease symptoms.

[Phytotoxicity Note:]

or

Some garden care products can cause adverse effects such as (yellowing) (browning) (slight burning of leaves). (Some sensitive plant varieties may be slightly burned by garden care products.) In general, plant damage can be avoided by following labeled rates. Plants to be treated can be checked for sensitivity to REGALIA® by applying the product to a few leaves and checking back in 2–4 days for signs of damage.

DISEASES CONTROLLED OR SUPPRESSED[†] [ON VEGETABLES, FRUITS, TREE NUTS, ORNAMENTAL PLANTS, TREES, SHRUBS, FLOWERS, BEDDING PLANTS, HEMP, FOLIAGE AND TROPICAL PLANTS]

(*)The (insert company name) Guarantee – If for any reason you are not satisfied with this product, send proof of purchase to the address shown and we will gladly refund your purchase price.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

OPTIONAL CLAIMS

The following claims may appear on any label panel

1. Boost plants' defenses [for stronger healthier plants]
2. Strengthens plants' immunity
3. Improves plant health
4. Controls/Prevents common garden diseases [and improves plant health]
5. Controls/Prevents powdery mildew, leaf spot and rust
6. Controls/Prevents black spot on rose
7. Fungal and bacterial disease control
8. Defends gardens by boosting plant defenses
9. Defending gardens against diseases...one plant at a time!
10. Use on fruits, vegetables and ornamentals
11. Can be applied as a pre-plant dip [for improved plant health]
12. Can be applied as a soil drench application
13. [Can be] use(d) as a preventative to protect [growing] plants from common garden diseases
14. For use on ornamental plants and edible crops/fruits/vegetables.
15. For use on vegetables, roses, fruits, berries, nuts, flowers, bedding plants, houseplants, (ornamental) trees and shrubs [located in residential landscapes].
16. REGALIA® Bioprotectant Concentrate may be used on vegetable(s) [crops], roses, fruits, berries, nuts, flowers, foliage, houseplants, (ornamental) trees and shrubs [located in residential landscapes].
17. REGALIA® Bioprotectant Concentrate is a broad spectrum fungicide used for the control or suppression of a broad range of foliar [fungal and bacterial] diseases.
18. (Active ingredient is) a plant extract to boost the plants' defense mechanisms to protect against certain fungal and bacterial diseases, and to improve plant health.
19. Active ingredient (is) made from a plant extract (botanical extract)(plant-based)
20. REGALIA® Bioprotectant Concentrate is an extract from the plant *Reynoutria sachalinensis*
21. REGALIA® Bioprotectant Concentrate can be applied up to and on the day of harvest [on all fruits and vegetables].
22. Made in the U.S.A.
23. This container is made with X% recycled material
24. Guaranteed results(*)
25. Label date:
26. US Patents No. 4,863,734 and No. 5,989,429

31. Distributed by: insert company name and address
32. company website
33. [For] questions/comments
34. 
35.  Can be used for organic gardening
36.  For (use in) organic gardening
37.  **CAN BE USED IN ORGANIC PRODUCTION**
38. GENERAL INFORMATION: REGALIA® Bioprotectant Concentrate is an extract from the plant *Reynoutria sachalinensis* REGALIA® Bioprotectant Concentrate applied to actively growing plants will improve plant health, and will help make the treated portions resistant to certain plant diseases. [Plant health benefits often result in greater yields at harvest, especially when crops/plants are stressed by pathogens or environmental conditions].
39. MODE OF ACTION: The extract obtained from *Reynoutria sachalinensis* plant material contains active chemical compounds. The extract, when applied to the host plant, increases the plant's defense system due to a five-fold increase in phenolics and antioxidants, and strengthens cell walls. This induced resistance against important diseases is not systemic, but provides some translaminar protection. The resistance induction takes place within one to two days of application.

Optional/Alternate text appears within parentheses, editorial text appears within brackets and is not intended for final printed label.

40. MODE OF ACTION: REGALIA® Bioprotectant Concentrate contains an extract from the plant *Reynoutria sachalinensis*, that when applied according to label directions triggers an immune response that protects treated plants from numerous diseases. The induced resistance provided by REGALIA® is not systemic, therefore thorough coverage of above-ground plant parts is important to achieving optimal control. [Repeat foliar applications at 7–14-day intervals to maintain induction and to protect new plant growth]. Use REGALIA® Bioprotectant Concentrate as a preventative treatment prior to the development of disease symptoms.
41. REGALIA® Bioprotectant Concentrate is (an extract from the plant *Reynoutria sachalinensis*) for use on (ornamental plants), (turf), (agricultural crops), (edible crops), (non-edible crops), (food crops), (non-food crops), (feed crops), or (non-feed crops).
42. Optional Language: (*) and (*= Not for use in California)
43. Repackaging or relabeling of this product without express written permission from Marrone Bio Innovations is prohibited.
44. Biofungicide
45. UPC code
46. RF code
47. Bio with Bite
48. For disease control
49. For fungal control
50. Can be used in sustainable production
51. For use in sustainable production
52. For maximum harvest
53. US MRL exempt
54. Minimal PPE
55. Protection from Multiple Diseases
56. Leaves no detectable residues
57. Product(s) thoroughly tested
58. Proven results, since 2007
59. Trial Tested
60. (number)+ trials
61. Read full label before use
62. Prevents (disease) and (fungal) build up
63. Protection from bacterial and fungal disease
64. REGALIA® Bioprotectant Concentrate can be applied by (any labeled use pattern) to protect against (diseases) and (fungal pathogens) (any labeled pest).
65. 2-10 tablespoons per 1,000 sq. ft. [must be consistent with rates to be listed on label]
66. For turf
67. For recreational turf and landscapes [when crop is listed]
68. For professional lawn care [when crop listed]
69. (Specify pest:) (Tank-mix) (or rotate) with a (fungicide) for improved control.
70. Refer to the table in the SOIL TREATMENT USE DIRECTIONS (In-Furrow Applications) section to determine the proper rate per 1000 foot of row.
71. REGALIA® Bioprotectant Concentrate should be used as part of an Integrated Pest Management System.
72. REGALIA® Bioprotectant Concentrate can be applied following a soil fumigant.
73. Use the high(er) labeled rate when high(er) (disease)(fungal pathogen) pressure is expected.
74. Optional Language: (*) and (*= Not labeled for this use in California)
