**Term of Issuance:**  
Conditional

**Name of Pesticide Product:**  
Tide Propiconazole 41.8% EC  
Fungicide

**Name and Address of Registrant (include ZIP Code):**  
Tide International USA, Inc.  
c/o Pyxis Regulatory Consulting, Inc.  
4110 136th St. NW  
Gig Harbor, WA 98332

**Note:** Changes in labeling differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Registration Division prior to use of the label in commerce. In any correspondence on this product always refer to the above EPA registration number.

On the basis of information furnished by the registrant, the above named pesticide is hereby registered/reregistered under the Federal Insecticide, Fungicide and Rodenticide Act.

Registration is in no way to be construed as an endorsement or recommendation of this product by the Agency. In order to protect health and the environment, the Administrator, on his motion, may at any time suspend or cancel the registration of a pesticide in accordance with the Act. The acceptance of any name in connection with the registration of a product under this Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by others.

This product is conditionally registered in accordance with FIFRA section 3(c)(7)(A) provided that you:

1) Submit and/or cite all data required for registration of your product under FIFRA sec 3(c)(5) when the Agency requires all registrants of similar products to submit such data; and submit acceptable responses required for reregistration of your product under FIFRA section 4.

2) Revise the product registration number to read “EPA Registration Number “84229-11”.

(continued on page 2)

**Signature of Approving Official:**  
Erik Kraft  
Acting Product Manager 20  
Fungicide Branch, Registration Division (7505P)

**Date:**  
JUN 24 2010
3) On page 5, change “General Information” to “Product Information”.

4) On page 24 and 27, change “General Recommendations” to “Directions”.

5) On page 27, change “recommended use rates” to “directed use rates”. “General Diseases must be defined”.

Submit one copy of the final printed labeling before the product is released for shipment. If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6(e). Your release for shipment of the product constitutes acceptance of these conditions. A stamped copy of the label is enclosed for your records. If you have any further questions, please contact Tracy Keigwin of my team at (703) 305-6605 or via e-mail at keigwin.tracy@epa.gov.

Sincerely,

Erik Kraft
Acting Product Manager 20
Fungicide Branch
Registration Division (7505P)

Enclosure: Label stamped “Accepted with Comments”
Tide Propiconazole 41.8% EC Fungicide

A broad spectrum fungicide for control of labeled plant diseases

ACTIVE INGREDIENT:
Propiconazole: 1-[[2-(2,4-dichlorophenyl)-4-propyl-1,3-dioxolan-2-yl[methyl]-1H-1,2,4-triazole ................................................................. 41.8%

OTHER INGREDIENTS: ........................................................................................................ 58.2%

TOTAL: ...................................................................................................................................... 100.0%

Contains 3.6 lbs. of propiconazole active ingredient per gallon.

KEEP OUT OF REACH OF CHILDREN
WARNING/AVISOSi usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand the label, find someone to explain it to you in detail).

FIRST AID

If in eyes:
• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

If on skin or clothing:
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

If swallowed:
• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

If inhaled:
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

HOT LINE NUMBER

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact CHEMTREC at 1-800-424-9300 for emergency medical treatment information.

See inside label booklet for additional PRECAUTIONARY STATEMENTS
PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
WARNING
Causes substantial but temporary eye injury. Do not get in eyes, on skin, or on clothing. Harmful if swallowed, inhaled, or absorbed through skin. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals. Avoid breathing spray mist.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category G on the EPA chemical resistance category selection chart.

Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Chemical-resistant gloves such as barrier laminate or viton
- Shoes plus socks
- Protective eyewear

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing or other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them.

Engineering Control Statements
Pilots must use an enclosed cockpit that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40CFR 160.240(d)(4-6)].

USER SAFETY RECOMMENDATIONS
Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside, then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
This product is toxic to fish and shrimp. Do not apply directly to water, or to areas where surface water is present, or to inter-tidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwater or rinsate.

PHYSICAL OR CHEMICAL HAZARDS
Combustible. Do not use, pour, spill, or store near heat or open flame.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:
- Long-sleeved shirt and long pants
• Chemical-resistant gloves such as barrier laminate or viton
• Shoes plus socks
• Protective eyewear

GENERAL INFORMATION

Tide Propiconazole 41.8% EC Fungicide contains the active ingredient, propiconazole, which provides control of a broad range of plant diseases in the listed crops, turf and ornamentals.

FAILURE TO FOLLOW DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN CROP INJURY, POOR DISEASE CONTROL, OR ILLEGAL RESIDUES.

GENERAL USE PRECAUTIONS

Rotation Crop Restrictions

To prevent possible illegal residues in crops grown in fields previously treated with Tide Propiconazole 41.8% EC Fungicide, follow the plant back restrictions in the following table.

<table>
<thead>
<tr>
<th>Number of Days to Wait Before Replanting After the Last Tide Propiconazole 41.8% EC Fungicide Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANYTIME</td>
</tr>
<tr>
<td>Crops listed on this label</td>
</tr>
</tbody>
</table>

INTEGRATED PEST MANAGEMENT

It is strongly advised that Tide Propiconazole 41.8% EC Fungicide be used in a sound integrated pest management (IPM) program. Follow all cultural practices that aid in reducing disease development. Additional IPM strategies specific to your area is available from your state cooperative extension service, professional consultants or other qualified authorities. Tide Propiconazole 41.8% EC Fungicide may be used in State Agricultural Extension advisory programs. These disease forecasting programs recommend timings for fungicide applications which are dependent on environmental factors which favor disease development.

RESISTANCE MANAGEMENT

There are inherent risks of diseases developing tolerance to any fungicide product; therefore it is strongly advised that Tide Propiconazole 41.8% EC Fungicide be used in a sound resistance management program. Tide Propiconazole 41.8% EC Fungicide belongs to the Group 3 class of fungicides which means that propiconazole acts as a demethylation inhibitor of sterol biosynthesis in the membranes of fungi. Resistance can develop whenever products with the same mode of action are used over and over in the same fields or crops. Follow the directions on this label for rotation of Tide Propiconazole 41.8% EC Fungicide with fungicides which are not in the Group 3 class and limitations on the number of applications per season of Tide Propiconazole 41.8% EC Fungicide. Additional resistance management strategies may be obtained from your local or State agricultural authorities. Avoid alternating the use of or tank-mixing Tide Propiconazole 41.8% EC Fungicide with other fungicides with known resistance to fungal diseases listed on this label.

SPRAY DRIFT MANAGEMENT

A variety of factors including weather conditions (e.g., wind direction, wind speed, temperature, and relative humidity) and method of application can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

Wind Speed
Do not apply at wind speeds greater than 15 mph.

Droplet Size
Apply as a medium or coarser spray (ASAE Standard 572).

Temperature Inversions
If applying at wind speeds less than 3 mph, the applicator must determine if a) conditions of temperature inversion exist, or b) stable atmospheric conditions exist at or below nozzle height. Do not make applications into areas of temperature inversions or stable atmospheric conditions.
Other State and Local Requirements
Applicators must follow all state and local pesticide drift requirements regarding application of propiconazole. Where states have more stringent regulations, they must be observed.

Equipment
All application equipment must be properly maintained and calibrated using appropriate carriers or surrogates.

Additional requirements for aerial applications:
1. The boom length must not exceed 75% of the wingspan or 90% of the rotor blade diameter.
2. Release spray at the lowest height consistent with efficacy and flight safety. Do not release spray at a height greater than 10 feet above the crop canopy unless a greater height is required for aircraft safety.
3. When applications are made with a crosswind, the swath must be displaced downwind. The applicator must compensate for this displacement at the up and downwind edge of the application area by adjusting the path of the aircraft upwind.

Additional requirements for groundboom applications:
1. Do not apply with a nozzle height greater than 4 feet above the crop canopy.

SPRAY EQUIPMENT
For optimum disease control, use sufficient volumes of water to ensure a thorough, uniform coverage of foliage. Avoid spray drift. Do not apply under conditions that might allow sprays to drift from the target area. Do not overlap sprays or crop injury may occur. Because air blast sprayers force spray droplets into the crop canopy using a forced air stream, the fan must be adjusted to deliver only enough air volume to penetrate the canopy and provide good coverage. Direct sprays to the target areas by adjusting deflectors.

Use only the same size nozzles that are spaced uniformly across the boom in order to provide accurate and uniform application. Calibrate all sprayer equipment prior to use. Ensure spray pressure at nozzles is 35-40 psi. Keep spray solution constantly agitated (re-circulate 10% of tank volume per minute using a jet agitator or liquid sparge tube. Do not air sparge). To prevent clogging of nozzles, use a 16-mesh or coarser screens (suction side of pump), a 50-mesh or coarser screen (between the pump and boom), and when required, a screen at the nozzles. Consult the nozzle manufacturer's recommendations.

Refer to the manufacturer's recommendations for additional information on GPA, pressure, speed, nozzle types and arrangements, nozzle heights above the target canopy, etc. For specific local directions and spray schedules, consult state cooperative extension service, professional consultants or other qualified authorities.

PREPARATION OF SPRAY SOLUTIONS
To prepare a spray tank solution of Tide Propiconazole 41.8% EC Fungicide, follow the steps below. Do not prepare more solution than is required for a day's work. Use only equipment that has been properly cleaned before use. Refer to the sections below on Tank Mixes.

1. Using clean fresh water, fill the spray tank ½ - ¾ full.
2. Begin agitation and then add the required amount of Tide Propiconazole 41.8% EC Fungicide. If tank mix partners are to be included, be sure that all partner products are compatible as a tank mix with Tide Propiconazole 41.8% EC Fungicide (refer to the Compatibility Test, below). Once compatibility has been determined, use the following order of addition: wettable powders and water dispersible granular formulations, liquid flowables, Tide Propiconazole 41.8% EC Fungicide, and then emulsifiable concentrates.
3. Allow the solution to agitate for 5 minutes to completely mix the water and formulation.
4. Continue agitation and fill the spray tank with the remaining water.
5. Agitate the solution continuously until the application operation is complete.
6. At the end of the day, rinse the spray tank with clean water. The pesticide rinsate may be disposed of by applying to an area which has been treated with Tide Propiconazole 41.8% EC Fungicide.

Tank Mixes
Tide Propiconazole 41.8% EC Fungicide may also be applied with other fungicides, insecticides or herbicides. Before mixing or applying any of these tank mixtures, carry out a Compatibility Test (see below). It the tank mix partner is considered to be compatible with Tide Propiconazole 41.8% EC Fungicide, prepare tank mixtures as recommended above and follow the proper order of addition to the spray tank.
When applying Tide Propiconazole 41.8% EC Fungicide as a tank mixture, observe all tank mix partner label directions for use, crops and use sites, application rates, dilution ratios, precautions, and limitations. Use the labeling that has the most restrictive label precautions and limitations. Do not mix Tide Propiconazole 41.8% EC Fungicide with any product that restricts tank mixing.

To avoid crop injury, do not mix Tide Propiconazole 41.8% EC Fungicide with Syllit®.

Compatibility Test
Before adding Tide Propiconazole 41.8% EC Fungicide or other products to a spray tank, carry out a compatibility test. Use a quart jar with a lid and add proportionate amounts of each ingredient with 1 quart of water to the jar. Use the following order for addition: wettable powders and water dispersible granular formulations, liquid flowables, and then emulsifiable concentrates. Cap the jar and shake for 5 minutes. Let the mixture sit for 5 minutes. If the mixture forms a precipitate that cannot be re-dispersed or mixes poorly, then the mixture should not be used. If the mixture stays mixed or remixes readily after standing, the mixture is physically compatible.

APPLICATION INSTRUCTIONS
Use sufficient volumes of water to ensure a thorough, uniform coverage of foliage. For best results, allow Tide Propiconazole 41.8% EC Fungicide residues to dry on foliage before a rainfall event.

Do not apply when conditions prevent a uniform coverage of crop canopy or if spray drift may occur.

Ground Application: Apply Tide Propiconazole 41.8% EC Fungicide to tree crops in a minimum of 50 gals. of water per acre and to other crops in a minimum of 10 gals. of water per acre, unless specified otherwise in this label.

Aerial Applications: Apply Tide Propiconazole 41.8% EC Fungicide to tree crops in a minimum of 10 gals. of water per acre and to other crops in a minimum of 2 gals. of water per acre, unless specified otherwise in this label.

Application Through Irrigation Systems (Chemigation) – Use chemigation to apply Tide Propiconazole 41.8% EC Fungicide to only the crops for which chemigation is specified on this label. Apply in no more than 0.1 – 0.25 inches of water or reduced efficacy may result.

Tide Propiconazole 41.8% EC Fungicide, alone or in combination with other pesticides which are registered for application through irrigation systems may be applied through irrigation systems. Apply this product only through center pivot, solid set, hand move, or moving wheel irrigation systems. Do not apply this product through any other type of irrigation system. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension...
Service specialists, equipment manufacturers, or other experts. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system, unless the pesticide label-prescribed safety devices for public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Notes: Do not inject Tide Propiconazole 41.8% EC Fungicide at full strength or deterioration of valves and seals may occur. Use a dilution ratio of at least 10 parts water to 1 part Tide Propiconazole 41.8% EC Fungicide. Tide Propiconazole 41.8% EC Fungicide is corrosive to many seal materials. Leather seals are best. EPDM or silicon rubber seals can be used, but should be replaced once a year. Do not use Viton, Buna-N, Neoprene, or PVC seals.

Operating Instructions
1. The system must contain a functional check-valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.
2. The pesticide injection pipeline must also contain a functional, automatic, quick-closing check-valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Do not apply when wind speed favors drift beyond the area intended.

Center Pivot Irrigation Equipment
Notes: (1) Use only drive systems which provide uniform water distribution. (2) Do not use end guns when chemigating Tide Propiconazole 41.8% EC Fungicide through center pivot systems because of non-uniform application.
• Determine the size of the area to be treated.
• Determine the time required to apply \( \frac{1}{2}\) inch of water over the area to be treated when the system and injection equipment are operated at normal pressures as recommended by the equipment manufacturer. When applying Tide Propiconazole 41.8% EC Fungicide through irrigation equipment, use the lowest obtainable water volume while maintaining uniform distribution. Run the system at 80-95% of the manufacturer's rated capacity.
• Using water, determine the injection pump output when operated at normal line pressure.
• Determine the amount of Tide Propiconazole 41.8% EC Fungicide required to treat the area covered by the irrigation system.
• Add the required amount of Tide Propiconazole 41.8% EC Fungicide and sufficient water to meet the injection time requirements to the solution tank.
• Make sure the system is fully charged with water before starting injection of the Tide Propiconazole 41.8% EC Fungicide solution. Time the injection to last at least as long as it takes to bring the system to full pressure.
• Maintain constant solution tank agitation during the injection period.
• Continue to operate the system until the Tide Propiconazole 41.8% EC Fungicide solution has cleared the sprinkler head.

Solid Set, Hand Move, and Moving Wheel Irrigation Equipment
• Determine the acreage covered by the sprinklers.
- Fill injector solution tank with water and adjust flow rate to use the contents over a 20 to 30-minute interval. When applying Tide Propiconazole 41.8% EC Fungicide through irrigation equipment, use the lowest obtainable water volume while maintaining uniform distribution.
- Determine the amount of Tide Propiconazole 41.8% EC Fungicide required to treat the area covered by the irrigation system.
- Add the required amount of Tide Propiconazole 41.8% EC Fungicide into the same quantity of water used to calibrate the injection period.
- Operate the system at the same pressure and time interval established during the calibration.
- Stop injection equipment after treatment is completed. Continue to operate the system until the Tide Propiconazole 41.8% EC Fungicide solution has cleared the last sprinkler head.

### CROP USE DIRECTIONS

#### BANANAS AND PLANTAINS

**Diseases:**
Black Sigatoka (Mycosphaerella fijiensis)

<table>

</thead>
</table>
| 3                                                             | Time applications of Tide Propiconazole 41.8% EC Fungicide to start at the beginning of the rainy season but before disease develops. Mix 3 fl. oz. of Tide Propiconazole 41.8% EC Fungicide/A in 10-20 gallons of water/Acre. Make 2 consecutive applications at 21 to 25 day intervals followed by two consecutive applications of a registered fungicide that has a different mode of action than Tide Propiconazole 41.8% EC Fungicide. Up to 8 applications of Tide Propiconazole 41.8% EC Fungicide are permitted, although it is highly recommended to avoid use of triazole fungicides for two consecutive months during the time when disease pressure is at its lowest. **How to prepare an Oil-In-Water Emulsion:** Add the ingredients to the spray tank in the order listed.  
1. Crop oil  
2. Emulsifier (0.6 fl. oz./gal. of oil) and Tide Propiconazole 41.8% EC Fungicide. Agitate mixture for at least 5 minutes.  
3. Water. Agitate the mixture for at least 15 minutes and maintain agitation during spraying operations.  
**How to prepare an Oil Alone Mixture:** Add the ingredients to the spray tank in the order listed.  
1. Crop oil.  
2. Tide Propiconazole 41.8% EC Fungicide. Agitate the mixture for at least 5 minutes and maintain agitation during spraying operations. | Maximum application rate per season: 24 fl. oz./Acre per season Tide Propiconazole 41.8% EC Fungicide including pre-harvest sprays (equivalent to a total of 0.67 lb. a.i./Acre per season of any product that contains propiconazole). Do not apply Tide Propiconazole 41.8% EC Fungicide within 100 yards of non-bagged bananas. Do not apply Tide Propiconazole 41.8% EC Fungicide on bananas or plantains if the fruit are not covered with polyethylene bags. Do not feed whole bananas and plantains to animals. |
### PINEAPPLE – HI ONLY

**Diseases:**
Butt rot (*Ceratocystis paradoxa*)

**Southern Stem Rot:** Use one of the application schedules below:
- 4 fl. oz./Acre of Tide Propiconazole 41.8% EC Fungicide: apply to the crown and pegging zones of the plant by chemigation or directed ground application about 45 days after planting, or at the first signs of disease. Reapply at 14 day intervals.
- 8 fl. oz./Acre of Tide Propiconazole 41.8% EC Fungicide: apply to the crown and pegging zones of the plant by chemigation or directed ground application about 60 days after planting (at pegging) or at the first sign of disease. Make one repeat application 3-4 weeks after the first application.

**Irrigation:** To apply Tide Propiconazole 41.8% EC Fungicide in irrigation water, use a minimum of 0.25-0.5 inches of irrigation water/Acre. Sufficient water is required in order for the fungicide to penetrate the canopy of peanut foliage and reach the crown of the plant (Southern Stem Rot is most active at this part of the plant). Additional treatment methods should be used to control leaf spot if Tide Propiconazole 41.8% EC Fungicide is applied by irrigation or as a directed ground application.
Diseases:
Aggregate Sheath Spot (Rhizoctonia oryzae-sativa)
Black Sheath Rot (Gaeumannomyces graminis)
Brown Leaf Spot (Helminthosporium oryzae)
Kernel Smut (Tilletia barclayana)
Narrow Brown Leaf Spot (Cercospora oryzae)
Sheath Blight (Rhizoctonia solani)
Sheath Spot (Rhizoctonia oryzae)

Suppression only:
False Smut (Ustilaginoidea virens)
Stem Rot (Sclerotium oryzae)

Wild Rice – MN Only
Brown Spot (Bipolaris spp.)
Helminthosporium Leaf Blight (Helminthosporium sp.)

Rate of Tide Propiconazole 41.8% EC Fungicide Fl. Oz. per Acre

<td>4-6</td>
<td>Apply by ground or by air. Use sufficient volumes of water to ensure a thorough, uniform coverage of foliage. For best results, allow Tide Propiconazole 41.8% EC Fungicide residues to dry on foliage before a rainfall event. Best results from aerial applications are obtained by using an oil-based additive that improves foliar coverage and penetration of crop canopy. <strong>Aerial Web Blight:</strong> Time applications to occur when disease first develops and apply 5-6 fl. oz./Acre. Make one repeat application at 14 to 21 days interval. Use the highest rate and shorter spray interval when disease conditions are severe. <strong>Other foliar diseases:</strong> Time applications to begin at growth stage R3 (early pod set: pods are 1/8-1/4 inch long) and apply 6 fl. oz./Acre. Make one repeat application at 14 to 21 days interval when growth stage is R5 (pod fill). <strong>Soybean rust:</strong> Time applications to occur when disease has been reported in the area since preventative applications will provide the best results. Use 4-6 fl. oz./Acre. Make repeat applications at 14 to 21 day intervals. Use the highest rate and shorter spray interval when disease is detected in the field or if less than 2 out of every 100 plants are infected. Control will be less than acceptable when more plants are infected or if the disease is in mid-canopy. Use scouting and monitoring techniques to determine disease infestations and its proximity to your fields. <strong>NOTE:</strong> Some varieties may develop crinkled, smaller and/or greener leaves from applications of Tide Propiconazole 41.8% EC Fungicide, however, dry bean yields are not reduced as a result of the Tide Propiconazole 41.8% EC Fungicide applications.</td>
<td>Maximum application rate per season: 12 fl. oz./Acre per season Tide Propiconazole 41.8% EC Fungicide (equivalent to a total of 0.34 lb. a.i./Acre per season of any product that contains propiconazole). Do not apply after Stage R6.</td>

GENERAL INFORMATION

Tide Propiconazole 41.8% EC Fungicide is a systemic fungicide for the control of a broad spectrum of diseases in turfgrass, ornamentals, landscape and nursery plantings.

PREPARATION OF SPRAY SOLUTIONS

To prepare a spray tank solution of Tide Propiconazole 41.8% EC Fungicide, follow the steps below. Do not prepare more solution than is required for a day's work. Use only equipment that has been properly cleaned before use. Refer to the sections below on Tank Mixes.

1. Using clean fresh water, fill the spray tank ½ - ⅔ full.
2. Begin agitation and then add the required amount of Tide Propiconazole 41.8% EC Fungicide. If tank mix partners are to be included, be sure the tank mix is compatible using a jar test prior to mixing. If compatible, use the following order of addition: wettable powders and water dispersible granular formulations (formation of a premix in water facilitates the mixing process), liquid flowables or suspension, Tide Propiconazole 41.8% EC Fungicide, and then other emulsifiable concentrates.
3. Allow the solution to agitate for 5 minutes to completely mix the water and formulation.
4. Continue agitation and fill the spray tank with the remaining water.
5. Agitate the solution continuously until the application operation is complete.
6. At the end of the day, rinse the spray tank with fresh water. The pesticide rinsate may be disposed of by applying to an area which has been treated with Tide Propiconazole 41.8% EC Fungicide.

TANK MIXES

When applied as a tank mix with other registered fungicides, Tide Propiconazole 41.8% EC Fungicide provides a broader spectrum of disease control. Many other registered herbicides and insecticides are compatible for use as a tank mix with Tide Propiconazole 41.8% EC Fungicide. Do not apply unless you have verified the compatibility of Tide Propiconazole 41.8% EC Fungicide and the tank mix partner before mixing. For tank mixes that are incompatible, add Unite® (3 pts./100 gals.) to the tank mix. Follow the directions under Preparation of Spray Solutions for how to prepare tank mixes with Tide Propiconazole 41.8% EC Fungicide. When applying Tide Propiconazole 41.8% EC Fungicide as a tank mixture, observe all tank mix partner label directions for use, crops and use sites, application rates, dilution ratios, precautions, and limitations. Use the labeling that has the most restrictive label precautions and limitations. Do not mix Tide Propiconazole 41.8% EC Fungicide with any product that restricts tank mixing.

NOTE: These directions do not apply to tank mixes containing spray additives. If spray additives are added to tank mixes, check that they are compatible before use.

TURFGRASS AND DICHDONTRA DISEASE CONTROL

GENERAL RECOMMENDATIONS

Tide Propiconazole 41.8% EC Fungicide should be used in a preventative disease control program and in conjunction with a turf disease management program. Before applying a fungicide, be sure that the correct disease has been identified so that the correct treatment is followed.

USE DIRECTIONS AND RATES: Tide Propiconazole 41.8% EC Fungicide must be applied in sufficient amounts of water to ensure a thorough, uniform coverage of the turfgrass. Do not apply until grass has been mowed, or apply and then allow sprays to dry completely before mowing. Refer to the table below for rates and application directions for various diseases. Optimum control is achieved with the higher specified rate and shorter spray interval if conditions for high disease pressure exist.

Foliar diseases: Do not irrigate until turfgrass has completely dried.

Soil-borne diseases: Irrigation or watering-in is allowed after application of Tide Propiconazole 41.8% EC Fungicide.

Bermudagrass: To prevent injury to any of the varieties of bermudagrass, do not apply more than 1.44 fl. oz./1,000 sq. ft. Tide Propiconazole 41.8% EC Fungicide every 30 days. In FL, do not apply Tide Propiconazole 41.8% EC Fungicide to bermudagrass golf course greens if temperatures are above 90° F.

RESTRICTIONS:

- Do not apply this product through any type of irrigation system.
- Do not graze animals on treated areas. Do not feed clippings from treated areas to livestock or poultry.
- Do not apply more than 5.8 fl. oz./1,000 sq. ft. of Tide Propiconazole 41.8% EC Fungicide per calendar year.
- Do not apply more than 1.79 lb. a.i. propiconazole per Acre per application.

### Turfgrass – Specific Rates, and Application Directions for Different Diseases

<table>

<th>Rate</th>
<th>Application Directions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Dollar Spot</strong> (Sclerotinia homoeocarpa):**</td>
<td>0.18 (8.0)</td>
<td>Apply at 7 day intervals when conditions favor development of disease. Apply at 14 day intervals as a tank mix with the low label rate of either Daconil Weather Stik® or Daconil Ultrex® fungicides.</td>
</tr>
<tr>
<td></td>
<td>0.37 (16)</td>
<td>Apply at 21-28 day intervals as a tank mix with the low label rate of either Daconil Weather Stik® or Chipco® 26019 fungicides.</td>
</tr>
<tr>
<td></td>
<td>0.37-0.73 (16-32)</td>
<td>Apply at 14 to 28 day intervals. If applied alone without a tank mix partner, do not apply more than 3 consecutive applications at the 0.35-0.75 fl. oz./1,000 sq. ft. rate. Then rotate to another fungicide that has a different mode of action.</td>
</tr>
<tr>
<td><strong>Anthracnose</strong> (Colletotrichum graminicola):**</td>
<td>0.37-0.73 (16-32)</td>
<td>Apply at 14 to 28 day intervals when conditions favor development of disease. Use the higher rate and shorter spray intervals for high disease pressure. A tank mix with another registered fungicide provides control of a broader disease spectrum. When disease has been detected, use 0.75 fl. oz. of Tide Propiconazole 41.8% EC Fungicide per 1,000 sq. ft. with either Daconil Weather Stik®, Daconil Ultrex® or Chipco® 26019 fungicides.</td>
</tr>
<tr>
<td><strong>Brown Patch</strong> (Rhizoctonia solani):**</td>
<td>0.37-0.73 (16-32)</td>
<td>Apply before disease is detected as a tank mix with other registered fungicides in May or June at 14 to 21 day intervals. The higher rate and shorter spray interval should be used if weather is hot and humid.</td>
</tr>
<tr>
<td><strong>Powdery Mildew</strong> (Erysiphe graminis) and <strong>Rust</strong> (Puccinia graminis):**</td>
<td>0.37-0.73 (16-32)</td>
<td>Apply at 14 to 28 day intervals when conditions favor development of disease. When the disease has been detected, use 0.75 fl. oz. of Tide Propiconazole 41.8% EC Fungicide per 1,000 sq. ft.</td>
</tr>
<tr>
<td><strong>Red Thread</strong> (Laetisaria fuciformis) and <strong>Pink Patch</strong> (Limonomyces roseipellis):**</td>
<td>0.37 (32)</td>
<td>Apply at 14 to 21 day intervals when conditions favor development of disease.</td>
</tr>
<tr>
<td><strong>Stripe Smut</strong> (Ustilago striiformis, Urocystis agropyri):**</td>
<td>0.37-0.73 (16-32)</td>
<td>Make a single application in the fall after grass becomes dormant or in the early spring before grass starts to grow.</td>
</tr>
<tr>
<td><strong>Gray Leaf Spot</strong> (Pyruplicaria grisea):**</td>
<td>0.37-0.73 (16-32)</td>
<td>Apply at 14 day intervals when conditions favor development of disease. Apply as a tank mix with another registered fungicide when using the 0.35 fl. oz./1,000 sq. ft. rate.</td>
</tr>
<tr>
<td><strong>Melting Out Leaf Spot</strong> (Bipolaris spp.) (Drechslera spp.):**</td>
<td>0.37-0.73 (16-63)</td>
<td>Apply at 14 day intervals. Leaf spot and melting will not be as severe when Tide Propiconazole 41.8% EC Fungicide is applied to plants that are under light to moderate disease pressure. Apply as a tank mix with another registered fungicide when using the 0.35-0.75 fl. oz./1,000 sq. ft. rate or for general broad spectrum disease control using the 0.35 fl. oz./1,000 sq. ft. rate.</td>
</tr>
</tbody>
</table>

**Summer Patch and Poa Patch** (Magnaporthe poae):
Apply starting in the spring and reapply at 14 day intervals at the 0.75 fl. oz./1,000 sq. ft. rate and at 28 day intervals at the 1.5 fl. oz./1,000 sq. ft. rate.

OR

1.45
(63)

Take-All Patch (Gaeumannomyces graminis)

0.73-1.45
(32-63)

Tide Propiconazole 41.8% EC Fungicide reduces the severity of this disease when applied at 0.35-0.75 fl. oz./1,000 sq. ft. in the Spring (April and May) and in the Fall (September and October, or if nighttime temperatures are below 55°F). Other local recommendations may be considered.

Spring Dead Spot (Leptosphaeria korrae, Leptosphaeria narmari, Ophiobolus herpotricha, Gaeumannomyces graminis)

1.45
(63)

Apply beginning in August and make up to 3 applications at 30 day intervals or make a single application in September or October.

Necrotic Ring Spot (Leptosphaeria korrae)

1.45
(63)

Depending on local recommendations, applications may be made in the Fall or early Spring.

Snowmold, Gray (Typhula spp.) and Pink (Microdochium nivale)

0.73-1.45
(32-63)

Make a single application in the late fall but before snow cover. Do not apply if ground is covered with snow. Best results are seen if the 0.75 and 1.1 fl. oz. rate of Tide Propiconazole 41.8% EC Fungicide is applied as a tank mix with either PCNB or chlorothalonil.

Fusarium patch (Fusarium nivale)

0.73-1.45
(32-63)

Time applications to occur in Fall or Early Spring when conditions favor development of the disease.

Yellow Patch (Rhizoctonia cerealis)

1.10-1.45
(48-63)

Make a single application in Late Fall but before snow cover. Do not apply if ground is covered with snow. Apply Tide Propiconazole 41.8% EC Fungicide at the 1.1 fl. oz./1,000 sq. ft. rate as a tank mix with another registered contact fungicide.

Zoysia patch, large patch of zoysia (Rhizoctonia solani)

1.10-1.45
(48-63)

Make a single application in Early Fall (mid-September to mid-October) before disease develops. Other local recommendations may be considered for the optimum timing for application.

Dichondra – Specific Rates, and Application Directions for Different Diseases

Dichondra Rust (Puccinia dichondrae)

0.73
(32)

Apply at 14 to 21 day intervals when conditions favor development of disease.

Establishment of Cool Season Turfgrass

In addition to use of Tide Propiconazole 41.8% EC Fungicide to control turfgrass diseases, Tide Propiconazole 41.8% EC Fungicide will aid in the establishment of new turfgrass when applied to cool season grass seedlings or sod.

New Seedlings: Tide Propiconazole 41.8% EC Fungicide applied at a rate of 0.35 fl. oz./1,000 sq. ft. to new turf at the 2 to 3-leaf stage will help root development and top growth.

Sod: Tide Propiconazole 41.8% EC Fungicide applied at a rate of 0.35 fl. oz./1,000 sq. ft. to sod 2-6 weeks before cutting will increase sod knitting and aid in faster establishment after laying.
NURSERIES (FIELD) AND LANDSCAPE PLANTINGS

GENERAL RECOMMENDATIONS

Tide Propiconazole 41.8% EC Fungicide should be used in a preventative disease control program and in conjunction with a disease management program. Before irrigating plants by overhead irrigation, allow the sprays on foliage to dry.

For the genera and species of plants listed in the tables below, acceptable tolerance to Tide Propiconazole 41.8% EC Fungicide has been observed. However, other plant species may not be as tolerant to Tide Propiconazole 41.8% EC Fungicide. Diseases not listed on this label may not be controlled with Tide Propiconazole 41.8% EC Fungicide. To treat other species of plants or diseases not listed on this label, test the recommended rate of Tide Propiconazole 41.8% EC Fungicide on a small number of plants. If the tested plants show no signs of phytotoxicity and disease is controlled, Tide Propiconazole 41.8% EC Fungicide may be used on a large number of plants.

USE RATES: The recommended use rates for control of diseases of ornamental plant species is 0.75-8.7 fl. oz. Tide Propiconazole 41.8% EC Fungicide in 100 gals. of water. The use directions in the Tables of Application Directions for Ornamentals Based on Rates and Specific Diseases are based upon the recommended use rates. Select the ornamental and disease to be treated in one of the five tables and follow the rate and directions for use in that table.

Outdoor Uses: The maximum amount of Tide Propiconazole that can be applied per crop per year is 2.0 gallons of 41.8% EC Fungicide per Acre.

Landscapes: General diseases are controlled with 2.2-3.0 fl. oz. in 100 gals. water. Optimum control is achieved when applied prior to development of disease and reapply at 21 day intervals.

RESTRICTIONS:

- Do not apply Tide Propiconazole 41.8% EC Fungicide to African violets, begonias, Boston fern, or geraniums.
- Do not apply this product through any type of irrigation system
- Do not use Tide Propiconazole 41.8% EC Fungicide in greenhouses or as a tree injection.
- Do not apply more than 5.8 fl. oz./1,000 sq. ft. of Tide Propiconazole 41.8% EC Fungicide per calendar year.
- Do not apply Tide Propiconazole 41.8% EC Fungicide as a tree injection or in greenhouses.

**STORAGE AND DISPOSAL**

Do not contaminate water, food, or feed by storage or disposal.

**PESTICIDE STORAGE:** Store in original container in a secured dry storage area. Prevent cross-contamination with other pesticides and fertilizers.

**PESTICIDE DISPOSAL:** Pesticide wastes may be toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

**CONTAINER DISPOSAL:** Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

**CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY**

**NOTICE:** Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

Tide International USA, Inc. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of this product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or Tide International USA, Inc., and Buyer and User assumes the risk of any such used. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, TIDE INTERNATIONAL USA, INC. MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

The Directions for Use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product in the event of ineffectiveness or other unintended consequences that may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of Tide International USA, Inc. or Seller. To the extent consistent with applicable law, all such risks shall be assumed by Buyer and User, and Buyer and User agree to hold Tide International USA, Inc. and Seller harmless for any claims relating to such factors.

To the extent consistent with applicable law, in no event shall Tide International USA, Inc. or Seller be liable for any incidental, consequential, or special damages resulting from the use or handling of this product. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER AND BUYER, AND THE EXCLUSIVE LIABILITY OF TIDE INTERNATIONAL USA, INC. AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT SHALL BE, AT THE ELECTION OF TIDE INTERNATIONAL USA, INC. OR SELLER, THE REPLACEMENT OF THE PRODUCT, OR COMPENSATION LIMITED TO DAMAGES NOT EXCEEDING THE FAIR MARKET PURCHASE PRICE, AND SHALL NOT INCLUDE INCIDENTAL OR CONSEQUENTIAL DAMAGES.
Tide International USA, Inc. and Seller offer this product, and Buyer and User accept it, subject to the foregoing conditions of sale and limitations of warranty and of liability, which may not be modified except by written agreement signed by the duly authorized representative of Tide International USA, Inc.
