UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
WASHINGTON, D.C. 20460

FEB - 3 2011

Mr. Olav Messerschidt  
Urth Tech LLC  
30777 Northwestern Hwy, Ste 300  
Farmington Hills, MI 48334

OFFICE OF CHEMICAL SAFETY  
AND POLLUTION PREVENTION

Subject: UrthPro™ Cleaner, Disinfectant, and Fungicide  
EPA Registration No.: 84368-1  
Submission Dated: September 9, 2010  
EPA Receipt Date: September 13, 2010

Dear Mr. Messerschidt,

The following amendment submitted in connection with registration under FIFRA section 3(c)(7)(A) is acceptable with conditions.

**Proposed Amendment**

Change primary eye irritation toxicity category

**Conditions**

Revise the label as follows:

- 1.) Delete the 6<sup>th</sup> claim in the left column on page 3.
- 2.) Revise the 17<sup>th</sup> claim in the left column on page 3 by deleting the terms, ingredients or chemicals.
- 3.) Revise the 6<sup>th</sup> claim in the right column on page 4 to by removing the brackets from the terms, allergens, dust mite matter, and pet dander such that the claims reads "*Reduces dust mite matter and pet dander allergens.*"
- 4.) Revise the 11<sup>th</sup> claim in the right column by qualifying the "kills germs" claim by stating "kills household/bathroom/household germs" since your product does not meet the Agency's criteria for an unqualified germs claim by not supporting data against a non-envelop virus.
- 5.) Since this product does not support efficacy data as a food contact sanitizer, you must delete all indirect food contact sites on page 5 such as kitchen tools, knives, and silverware. You must indicate that appliances being disinfected must not be used as non food contact surfaces by

SYMBOLS	stating "exterior surfaces of"	beverage bars, freezers, grills, stovetops, and toasters.			
SURNAME	.....				
DATE	.....				

6.) You must qualify tile and stone are hard nonporous surfaces on page 5 by stating “glazed” tile and “sealed” stone.

7.) Revise the “4.2.3.1 and 4.4.1 Hard, Smooth surface (Glass, Metal)” directions on page 10 by deleting the “mist” application method. The mist application method is not an option to supporting disinfection claims on hard, smooth surfaces, and thereby must be deleted from these sections of directions. The fogging application is an adjunct to normal disinfection procedures and the proposed labeling is misleading to the users.

**Data Summary**

Data Requirement	Means of Support	Status
Primary Eye Study in Rabbits	Submitted study, MRID 482230-01	Acceptable, Category III

**General comments**

A stamped label accepted with conditions is enclosed. Submit three (3) copies of your final printed labeling before distributing or selling the product bearing the revised labeling.

Submit and/or cite all data required for registration/reregistration of your product under FIFRA section 3(c)(5) when the Agency requires all registrants of similar products to submit such data.

If the above conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6(e). Your release for shipment of the product bearing the amended labeling constitutes acceptance of these conditions.

Should you have any questions or comments concerning this letter, please contact me by telephone at (703) 308-6416 or email at: [campbell-mcfarlane.jacqueline@epa.gov](mailto:campbell-mcfarlane.jacqueline@epa.gov) or Chris Jiang by telephone at (703) 305-0545 or email at: [jiang.chris@epa.gov](mailto:jiang.chris@epa.gov).

Sincerely,

Jacqueline McFarlane  
Product Manager (34)  
Regulatory Management Branch II  
Antimicrobials Division (7510P)

{Optional text}

URTHPRO Cleaner, Disinfectant and Fungicide is an effective disinfectant against *Salmonella enterica* (ATCC #10708), *Staphylococcus aureus* (ATCC #6538) and *Pseudomonas aeruginosa* ATCC #15442) on hard, non-porous surfaces in the presence of 5% organic soil for a 5-minute contact time

URTHPRO Cleaner, Disinfectant and Fungicide is effective against fungi, including *Trichophyton mentagrophytes* (ATCC #9533).

URTHPRO Cleaner, Disinfectant and Fungicide kills influenza A viruses (H1N1) within a 1-minute contact time.

## **DIRECTIONS FOR USE**

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

The person applying this product is responsible for following these directions under both state and federal laws.

### **1.0 General**

URTHPRO Cleaner, Disinfectant and Fungicide liquid formula kills and eliminates bacteria, including *Salmonella enterica*, *Staphylococcus aureus* and *Pseudomonas aeruginosa*, mold and fungi, including *Trichophyton mentagrophytes*, in 5 minutes, and influenza A viruses in 1 minute. URTHPRO Cleaner, Disinfectant and Fungicide destroys odor, stain causing or other damage causing organisms including mold and mildew on hard, non-porous surfaces including floors, walls, contents and other interior building surfaces until such time as the cause of such growth can be identified and corrected. It is also used as [one component] [part of an all-in-one] [part of a one-step] mold remediation or water damage restoration program. The purpose of such a program is to minimize damage from growth of mold and other odor, stain and damaging organisms, and help building interiors continue in that condition. This product must only be used in those cases where visible microbial growth has been detected and then only as part of a program that removes that growth and identifies and corrects the conditions that led to that growth. If you need help understanding these instructions or have additional questions after reading these instructions, DO NOT APPLY THIS PRODUCT until you received answers for all of your questions.

### **2.0 Causes of Microbial Growth**

Microbial (including bacteria, mold, mildew, and other fungi) growth is present at all times both outdoors and in building interiors. Normally the natural balance of the environment limits such growth to acceptable levels. Under certain conditions, growth can reach problem levels and if not controlled, will cause foul odors, stain and damage furnishings and valuables, and may even destroy structural components of the building. Normally fungal spores, live organisms and food sources are plentiful in building interiors. Elevated water from the following can lead to growth:

#### **2.1 Floods**

If water floods the interior of a building it brings a massive load of organic matter, bacteria and fungal spores. If the water and excessive organic load is not cleaned quickly, substantial growth will result. Floods can result from rising water and plumbing failures.

#### **2.2 Leaks**

Leaks release lesser amounts of water, often over extended time periods. Thus, they can lead to high levels of growth in wall cavities and other spaces where they are not visible until considerable damage has been done. Leaks can be both from plumbing, roof, wall or other structural failures.

### 2.3 Humidity

Microorganisms grow in moisture that form on surfaces and within porous materials. This is known as water activity of the material or surface. High levels of humidity can lead to sufficient surface water activity to support accelerated growth if that elevated level is maintained for as little as 24 hours. Accelerated growth takes place with some fungi within 24 hours at humidity levels between 66% - 70%.

### 3.0 Indications for Use and Guidelines

Homeowners and building managers must survey their buildings at least monthly for any of the following conditions. When they are found, they must be corrected according to the guidelines.

#### 3.1 Visible Growth

Areas of visible growth of less than 32 square feet (the area of a single wall panel) can normally be remediated without elaborate procedures. When these areas are identified, mist (see application instruction below) lightly with URTHPRO Cleaner, Disinfectant and Fungicide to completely kill and eliminate bacteria, mold and fungi until the area can be thoroughly cleaned and remediated. If growth is on ceiling tiles or other such easily removable items of nominal value, remove them and seal them in a plastic bag and dispose with normal trash. If the surface is not easily replaceable:

- Clean contaminated area to remove surface soil. For best results, and to avoid possible interference from other chemicals, use URTHPRO Cleaner, Disinfectant and Fungicide for initial cleaning. Use a cloth, cleaning pad or brush suitable to the durability of the surface being cleaned. Remove as much dirt and visible mold as possible.
- Apply URTHPRO Cleaner, Disinfectant and Fungicide on cleaned area until evenly wet and let it stand for 5 minutes.
- Allow treated surfaces to dry completely.
- Wipe with wet sponge or cloth if cosmetically necessary.

Areas larger than 32 square feet require special procedures and individuals trained in remediation. Guidelines for remediation of large areas of contamination have been established by the Indoor Air Quality Association ([www.iaqa.org](http://www.iaqa.org)) and the US Environmental Protection Agency ([www.epa.gov](http://www.epa.gov)). Many in the field also refer to the New York City Department of Health "Guidelines on Assessment and Remediation of Fungi in Indoor Environments." Before using URTHPRO Cleaner, Disinfectant and Fungicide in mitigation of large projects, you must be knowledgeable of one or more of these guidelines and follow them when using this product.

#### 3.2 Water Damage

Evidence of possible water damage includes water stains on ceilings and walls, persistent wet spots or actual flowing water whether from plumbing failure or outside sources. When water damage is suspected, the first priority is to find the source of water and cut it off. Once that has been accomplished, excess water must be removed. Detailed guidance on proper removal on excess levels of water is contained in "Standard and Reference Guide for Professional Water Damage Restoration" (IICRC S500) published by the Institute of Inspection, Cleaning and Restoration Certification ([www.iicrc.org](http://www.iicrc.org)). If excess

water has been removed completely in 24 hours or less, spraying surfaces that are wet with URTHPRO Cleaner, Disinfectant and Fungicide will kill any potential bacteria, fungi or mold that might have grown on the surfaces and no other steps should be necessary.

Where structural members and/or contents have been exposed to water in excess of 24 hours, there is a possibility of extensive microbial growth that may be visible or hidden. In that case a complete assessment and remediation plan must be prepared that properly incorporates the use of URTHPRO Cleaner, Disinfectant and Fungicide, provides for the user and occupant safety documentation and monitoring of the remediation process. If you are not experienced in preparing and executing such a plan, IICRC S500 contains excellent guidance. In the context of such a plan, URTHPRO Cleaner, Disinfectant and Fungicide can be used on materials to be removed and disposed of and in other applications where an Antimicrobial use is indicated.

#### **4.0 General Directions for Using URTHPRO Cleaner, Disinfectant and Fungicide**

URTHPRO Cleaner, Disinfectant and Fungicide's patented technology completely destroys [kills] [and] [eliminates] household and residential bacteria, including *Salmonella enterica*, *Staphylococcus aureus* and *Pseudomonas aeruginosa*, mold and fungi, including *Trichophyton mentagrophytes*, in 5 minutes, and influenza A viruses in 1 minute. URTHPRO Cleaner, Disinfectant and Fungicide also effectively eliminates stain and odor causing bacteria, mold and fungi, or damage causing organisms on floors, walls, and other surfaces in residential, commercial, institutional, and industrial buildings in 5 minutes. URTHPRO Cleaner, Disinfectant and Fungicide also eliminates odors associated with bacteria, mold, mildew, smoke, animals, cooking, spoilage, musty and other odors and removes odor-causing organisms when used as part of a comprehensive preventative maintenance approach.

URTHPRO Cleaner, Disinfectant and Fungicide is a bactericide and fungicide, which [destroys] [kills] [eliminates] disease causing household and residential bacteria, mold and fungi, and is a deodorizer for use in residential, commercial and industrial settings. It will not stain or bleach materials or fabrics and will not harm or damage most interior surfaces. Test on an inconspicuous area if you are unsure of the surface on which you are working.

URTHPRO Cleaner, Disinfectant and Fungicide is formulated for use on all kinds of surfaces including:

- Painted wallboard
- Structural members and supports
- Ceilings and above ceiling spaces
- Basements and crawl spaces
- Cabinets and countertops
- Case goods and other furnishings
- Floor surfaces

Follow the directions for the specific type of component being treated. The following directions must be carefully read and understood prior to using the product.

#### **4.1 Mixing Instructions**

4.1 URTHPRO Cleaner, Disinfectant and Fungicide is a ready to use product – DO NOT DILUTE. Read the label before using.

#### **4.2 Application Equipment and Devices**

Apply URTHPRO Cleaner, Disinfectant and Fungicide on the surface until thoroughly wet, let it stand for 5 minutes and wipe with wet sponge or cloth if is cosmetically necessary. URTHPRO Cleaner, Disinfectant and Fungicide must come in direct contact with bacteria, mold, fungi or other micro-organisms to be effective.

Refer to the precautionary statements and other special instructions that must be followed.

##### **4.2.1 Brush, Mop or Wipe Application**

Brush, Mop or Wipe Application may be specified by some facility maintenance or remediation plans. These techniques are generally more labor intensive than other methods and are normally used only when specifications require. These methods are suitable only for smooth uniform surfaces. Do not use on porous or non-uniform surfaces. When using brush or mop application, tools and materials used must be reserved only for application of URTHPRO Cleaner, Disinfectant and Fungicide, kept clean and protected between uses and replaced when worn or visibly soiled. Natural fiber brushes are preferred although any quality brush is acceptable. Where other types of cloths are used, they must be soft enough that they absorb a sufficient quantity of liquid to provide uniform application.

During Brush, Mop or Wipe Application, the applicator must have access to the surfaces being treated. Apply to a limited area at a time. Overlap applications to assure complete coverage. Cover completely while avoiding runs or pooling.

##### **4.2.2 ULV (Ultra Low Volume) or Mist Generating Sprayers**

ULV, mist or other small particle application is preferable where surfaces are irregular or less accessible. Equipment capable of generating particles in the 15 – 60 micron range is most satisfactory. Do not use thermal type fog generators.

Generally a fog will carry and provide adequate coverage up to 8 feet from the point of application so the fog must be directed in all directions to assure coverage without over wetting. All surfaces must be cleaned and disinfected in accordance to label directions prior to fogging. Fogging is only to be used as an adjunct to surface disinfection. Personal protective equipment including HEPA filtered mask, hooded coveralls and rubber gloves must be used when applying in open space with mist generating application equipment.

Close room off so fog is confined to room to be treated. Insert nozzle or fogger through suitable opening to room. Vacate area of all personnel during fogging. Do not allow people to breathe or contact the fog or to enter the room until the fog

has completely settled or exhausted. Do not use surfaces or equipment until treatment has dried.

#### **4.2.3 Spray Applications and Rates**

##### **4.2.3.1 Hard, Smooth surface (Glass, Metal)**

Apply until surface is evenly wet. ~~Wipe~~, wipe or spray coverage rate is 400 ft<sup>2</sup> per gallon. If this rate results in surface runoff or liquid pooling, lower the application rate until the surface is thoroughly and evenly wet without runoff or pooling.

##### **4.2.3.2 Semi-Porous Surfaces such as Concrete or Plaster or Wallboard**

Apply until surface is evenly wet. Mist coverage rate is 200 ft<sup>2</sup> per gallon. Wipe is not recommended. Spray coverage rate is 100 ft<sup>2</sup> per gallon. URTHPRO Cleaner, Disinfectant and Fungicide must penetrate into surface crevices and irregularities or it will not be effective. Inspect and assure that penetration is satisfactory. It may be helpful to make multiple applications at a lower application rate on some surfaces as the first application will wet the surface and facilitate penetration of following applications.

#### **4.3 Application Techniques**

URTHPRO Cleaner, Disinfectant and Fungicide must be applied evenly over surfaces that are being treated. Even and uniform application is essential for satisfactory results. The procedures, equipment and techniques described below have been tested and provide desired results.

#### **4.4 Rate of Application**

Users of this product must carefully follow the rate of application instructions provided below.

##### **4.4.1 Hard, Smooth surface (Glass, Metal)**

Apply until surface is evenly wet. ~~Wipe~~, wipe or spray coverage rate is 400 ft<sup>2</sup> per gallon. If this rate results in surface runoff or liquid pooling, lower the application rate until the surface is thoroughly and evenly wet without runoff or pooling.

##### **4.4.2 Semi-Porous Surfaces such as Concrete or Plaster or Wallboard**

Apply until surface is evenly wet. Mist coverage rate is 200 ft<sup>2</sup> per gallon. Wipe is not recommended. Spray coverage rate is 100 ft<sup>2</sup> per gallon. URTHPRO Cleaner, Disinfectant and Fungicide must penetrate into surface crevices and irregularities or it will not be effective. Inspect and assure that penetration is satisfactory. It may be helpful to make multiple applications at a lower application rate on some surfaces as the first application will wet the surface and facilitate penetration of following applications.

#### **4.5 Frequency of Application**

URTHPRO Cleaner, Disinfectant and Fungicide is suitable for frequent reapplication, but a single application will provide effective control. If there is evidence of re-growth, investigate to determine the cause of re-growth and correct that problem prior to re-application. Also make sure the re-occurrence of microbial growth does not have another cause such as persistently high humidity, standing water or hidden leaks.

Removed components that are contaminated with mold and other microbial growth may spread contamination while being removed from the building. To prevent this, smaller items must be placed in plastic bags that must then be sealed before being removed. Larger items that cannot be safely packaged must be treated before being moved through occupied spaces.

### NOTICE ON CONDITIONS OF SALE

The **Directions For Use** of this product reflects the opinion of experts based on experimental use and tests. The directions are believed to be reliable and must be followed carefully. However, it is impossible to eliminate all risks inherently associated with the use of this product. Ineffectiveness or other unintended consequences may result, because of factors such as the presence of other materials, or use of the product in a manner inconsistent with its labeling, all of which are beyond the control of UrthTech or the Seller.

To the extent consistent with applicable law, UrthTech warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the **Directions For Use**, subject to the inherent risks, referred to above. To the extent consistent with applicable law, UrthTech makes no other express or implied warranty of fitness or merchantability or any other express or implied warranty. To the extent consistent with applicable law, in no case shall UrthTech or the Seller be liable for consequential, special or indirect damages resulting from the use or handling of this product. To the extent consistent with applicable law, UrthTech and the Seller offer this product, and the Buyer and user accept it, subject to the foregoing **Conditions of Sale and Warranty** which may be varied only by agreement in writing signed by a duly authorized representative of UrthTech.
