Page 2 of 2 EPA Reg. No. 85678-38 Decision No. 514138

- 2. Make the following label changes before you release the product for shipment:
  - Revise the EPA Registration Number to read, "EPA Reg. No. 85678-38."
- 3. Submit one copy of the revised final printed label for the record before you release the product for shipment.

Should you wish to add/retain a reference to the company's website on your label, then please be aware that the website becomes labeling under the Federal Insecticide Fungicide and Rodenticide Act and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) list examples of statements EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product's label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA's Office of Enforcement and Compliance.

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6. Your release for shipment of the product constitutes acceptance of these conditions. A stamped copy of the label is enclosed for your records. Please also note that the record for this product currently contains the following CSFs:

• Basic CSF dated 2-19-16

If you have any questions, please contact Erik Kraft at (703) 308-9358 or kraft.erik@epa.gov.

Enclosure

## For Control of Certain Weeds in Cotton, Dry Beans, Snap Beans, and Soybeans

Active Ingredient:	
Sodium salt of fomesafen:	
5-[2-chloro-4-(trifluoromethyl)phenoxy]-N-(methylsulfonyl)-2-nitrobenzamide 2	2.8%
Other Ingredients:	7.2%
Total:	0.0%
Equivalent to 21.7% or 2 pounds per U.S. gallon or 240 grams per liter of fomesafen active ingredient.	

# KEEP OUT OF REACH OF CHILDREN DANGER/PELIGRO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

	FIRST AID		
IF IN EYES	<ul> <li>Hold eye open and rinse slowly and gently with water for 15-20 minutes.</li> </ul>		
	• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.		
	Call a poison control center or doctor for treatment advice.		
IF ON SKIN	IF ON SKIN • Take off contaminated clothing.		
<b>OR</b> • Rinse skin immediately with plenty of water for 15-20 minutes.			
CLOTHING	CLOTHING • Call a poison control center or doctor for treatment advice.		
IF INHALED	Move person to fresh air.		
	• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably		
	mouth-to-mouth, if possible.		
<ul> <li>Call a poison control center or doctor for further treatment advice.</li> </ul>			
NOTE TO PHYSICIAN			
Probable mucosal damage may contraindicate the use of gastric lavage.			
EMERGENCY NUMBERS			
Have the product container or label with you when calling a poison control center or doctor or going for treatment.			
For 24 Hour Medical Emergency Assistance (Human or Animal), Call 1-800-222-1222. For Chemical Emergency			

Assistance (Spill, Leak, Fire, or Accident), Call ChemTrec at **1-800-424-9300**.

[See [additional] [complete] Precautionary Statements, and Directions For Use inside booklet.]

Manufactured [in China] For:

RedEagle International LLC 5143 S. Lakeland Dr., Suite 3 Lakeland, FL 33813 EPA Reg. No.: 85678-XX EPA Est.:\_\_\_\_\_

Net Contents:\_\_\_\_\_

## PRECAUTIONARY STATEMENTS

### HAZARDS TO HUMANS AND DOMESTIC ANIMALS

**DANGER.** Corrosive. Causes irreversible eye damage. Harmful if swallowed or absorbed through skin. Do not get in eyes or on clothing. Avoid contact with skin.

### **PERSONAL PROTECTIVE EQUIPMENT (PPE)**

# Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves such as barrier laminate or viton
- Shoes plus socks
- Protective eyewear

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

### USER SAFETY RECOMMENDATIONS

#### Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

### **ENVIRONMENTAL HAZARDS**

Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters. Do not apply when weather conditions favor drift from target area. This chemical is known to leach through soil into groundwater under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

### **GROUNDWATER ADVISORY**

Fomesafen is known to leach through soil into groundwater under certain conditions as a result of label use. This chemical may leach into groundwater if used in areas where soils are permeable, particularly where the water table is shallow.

### SURFACE WATER ADVISORY

This product may impact surface water quality due to spray drift and runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. This product is classified as having high potential for reaching surface water via runoff for several months after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of fomesafen from runoff water and sediment. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours. See the manual for "Conservation Buffers to Reduce Pesticide Losses" at the following internet address: http://www.wsi.nrcs.usda.gov/products/W2Q/pest/core4.html

## **DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls
- Chemical-resistant gloves such as barrier laminate or viton
- Shoes plus socks
- Protective eyewear

### PRODUCT INFORMATION

### Read all label directions before using.

RedEagle Fomesafen 2SL is a selective herbicide which may be applied Pre-Plant surface, pre-emergence and/or Post-Emergence for control or partial control of broadleaf weeds, grasses and sedges in cotton, dry beans, snap beans, and soybeans.

### **Pre-Plant Surface and Pre-Emergence Applications**

Certain germinating broadleaf weeds, grasses and sedges can be controlled or partially controlled by soil residual activity from either Pre-Plant surface or pre-emergence applications of RedEagle Fomesafen 2SL.

Moisture is necessary to activate RedEagle Fomesafen 2SL in soil for residual weed control. Dry weather following applications of RedEagle Fomesafen 2SL may reduce effectiveness. When adequate moisture is not received after a RedEagle Fomesafen 2SL application, weed control may be improved by overhead irrigation with at least a 1/4 inch of water.

### **Post-Emergence Applications**

RedEagle Fomesafen 2SL is generally most effective when used Post-Emergence, working through contact action. Therefore, emerged weeds must have thorough spray coverage for effective control. Best broad spectrum post-emergence control of susceptible broadleaf weeds is obtained when RedEagle Fomesafen 2SL is applied early to actively growing weeds.

This usually occurs within 14 to 28 days after planting. Refer to the weed control tables for specific recommendations on weed growth stages and rates. Some bronzing, crinkling or spotting of labeled crop leaves may occur following post-emergence applications, but labeled crops soon outgrow these effects and develop normally.

### Soil Characteristics

Application of RedEagle Fomesafen 2SL to soils with high organic matter and/or high clay content may require higher rates than soils with low organic matter and/or low clay content. Refer to the "Regional Boundaries/Definition" section of this label, weed control tables, and specific crop use sections for recommendations on use rates based on soil texture.

### **Environmental and Agronomic Conditions**

Always apply RedEagle Fomesafen 2SL under favorable environmental conditions that promote active weed growth. Avoid applying RedEagle Fomesafen 2SL to weeds or labeled crops which are under stress from drought, extreme temperatures, excessive water, low humidity, low soil fertility, mechanical or chemical injury as reduced weed control and/or increased crop injury may result.

### Rainfastness

RedEagle Fomesafen 2SL requires a 1 hour rain-free period for best results when applied post-emergence.

### Cultivation

Cultivation prior to Post-Emergence application is not recommended. Cultivation may put weeds under stress, reducing weed control. Timely cultivation 1-3 weeks after applying RedEagle Fomesafen 2SL may assist weed control.

### RESISTANT WEED MANAGEMENT

RedEagle Fomesafen 2SL contains the active ingredient fomesafen which inhibits the enzyme, protoporphyrinogen oxidase (PPO or PROTOX, Site of Action Group 14). Some naturally occurring weed populations have been identified as resistant to Group 14 herbicides. Selection of resistant biotypes, through repeated use of these herbicides or lower than directed use rates in the same field, may result in weed control failures. A resistant biotype may be present where poor performance cannot be attributed to adverse environmental conditions or improper application methods. If resistance is suspected, contact your local X representative and/or agricultural advisor for assistance. Principles of herbicide resistant weed management:

• Employ integrated weed management practices. Use multiple herbicide sites-of-action with overlapping weed spectrums in rotation, sequences, or mixtures.

- Use the full directed herbicide rate and proper application timing for the hardest to control weed species present in the field.
- Scout fields after herbicide application to ensure control has been achieved.
- Avoid allowing weeds to reproduce by seed or to proliferate vegetatively.
- Monitor site and clean equipment between sites.
- Start with a clean field and control weeds early by using a burndown treatment or tillage in combination with a pre-emergence residual herbicide as appropriate.
- Use cultural practices such as cultivation and crop rotation, where appropriate.
- Use good agronomic principles that enhance crop competitiveness. .

### **APPLICATION DIRECTIONS**

Drift Management: Avoiding spray drift at the application site is the responsibility of the applicator and the grower. The interaction of many equipment and weather-related factors determines the potential for spray drift. The applicator and grower must consider the interaction of equipment and weather-related factors to ensure that the potential for drift to sensitive non-target plants is minimal. This pesticide may only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, nontarget plants) is minimal (i.e., when the wind is blowing away from the sensitive area).

Spray Additives: Only spray additives cleared for use on growing crops under 40 CFR 180.1001 may be used in spray mixture.

### For Post-Emergence Applications Always Add One Of The Following Except in Tank Mix With Products Prohibiting Spray Additives:

Nonionic Surfactant (NIS) - Use NIS containing at least 75% surface active agent at 0.25 to 0.5% v/v (1-2 qts./100 gals.) of the finished spray volume.

Crop Oil Concentrate (COC) - Use a nonphytotoxic COC containing 15-20% approved emulsifier, at 0.5-1% v/v (0.5-1 gal./100 gals.) of the finished spray volume. COC can improve weed control but may slightly reduce crop tolerance.

Other Adjuvants - Adjuvants other than COC or NIS may be used providing the product meets the following criteria:

- 1. Contains only EPA exempt ingredients.
- 2. Is nonphytotoxic to the target crop.
- 3. Is compatible in mixture. (May be established through a jar test.)
- 4. Is supported locally for use with RedEagle Fomesafen 2SL on the target crop through proven field trials and through university and extension recommendations.

Note: No adjuvants are needed for pre-plant surface or pre-emergence applications unless RedEagle Fomesafen 2SL is being used in a burndown on emerged weeds.

### **Recommended Mixing Order:**

- 1. Fill the spray tank with half the required amount of water and begin agitation.\*
- 2. Add dry pesticide formulations.
- 3. Add RedEagle Fomesafen 2SL.
- 4. Add liquid pesticide formulations.
- 5. Add spray adjuvant and fertilizer (if used).
- Add the remaining water and maintain agitation throughout the spray operation. 6.
- \*Compatibility agent, 1 gallon/500 gallons of water or 0.2% v/v, may be added as needed.

### **GROUND APPLICATION**

Pre-Plant Surface and Pre-Emergence Application: Use a minimum of 10 gallons per acre. Nozzle selection should meet manufacturer's gallonage and pressure recommendations for pre-plant surface or pre-emergence applications.

Post-Emergence Application: Use sufficient spray volume and pressure to ensure complete coverage of the target weed. A spray volume of 10-20 gallons per acre and 30-60 psi at the nozzle tip is recommended. On large weeds and/or dense foliage, use 60 psi and a minimum of 20 gallons per acre to ensure coverage of weed foliage. The use of flat fan nozzles will result in the most effective postemergence application of RedEagle Fomesafen 2SL. Use nozzles that are set up to deliver medium quality spray (ASAE Standard S-572).

### DO NOT USE FLOOD TYPE OR OTHER SPRAY NOZZLES, WHICH DELIVER COARSE, LARGE DROPLET SPRAYS.

### **BAND APPLICATIONS**

Calculate the amount of herbicide and water volume needed for band treatment by the following formulas:

Band width in inches row width in inches	Х	broadcast rate per acre	=	Band herbicide rate per acre
Band width in inches row width in inches	Х	<u>broadcast volume</u> per acre	=	Band water volume per acre

**Note:** Thorough weed coverage is important for Post-Emergence band applications. Best coverage is obtained with a minimum of two nozzles, one directed to each side of the planted row. Application with a single nozzle directed over the top of the row is not recommended for Post-Emergence applications but is suitable for pre-emergence applications. Cultivation of untreated areas may be needed following band applications. When making Post-Emergence band applications and cultivating in the same operation, position nozzles in advance of the cultivation device. This will reduce dust in the spray area. Dust can intercept spray, reducing weed coverage resulting in less than adequate weed control.

**AERIAL APPLICATION:** Use sufficient spray volume and pressure to ensure complete coverage of the target. A minimum of 5 gallons per acre of spray mixture should be applied with a maximum of 40 PSI pressure. When foliage is dense, use a minimum of 10 gallons per acre to ensure coverage of weed foliage.

### DO NOT APPLY THIS PRODUCT THROUGH ANY TYPE OF IRRIGATION SYSTEM.

### **USE PRECAUTIONS**

- Thoroughly clean the spray system with water and a commercial tank cleaner before and after each use.
- Tank mixes of RedEagle Fomesafen 2SL with other pesticides, fertilizers or any other additives except as specified on this label or other approved RedEagle International LLC supplemental labels may result in tank-mix incompatibility, unsatisfactory performance or unsatisfactory crop injury.

### **USE RESTRICTIONS**

- (see "Regional Boundaries/Definition" Section of this label for Regional Boundaries)
- Avoid overlapping spray swaths, as injury may occur to rotational crops.
- Do not exceed ground speed of 10 mph during application for adequate coverage.
- Do not allow RedEagle Fomesafen 2SL to drift to all other crops and non-target areas. Crops other than those labeled may be severely injured by drift.
- Do not apply when wind velocity exceeds 15 mph.
- Do not make ground or aerial application during temperature inversions.
- Region 1: A maximum of 1.5 pts. of RedEagle Fomesafen 2SL (or a maximum of 0.375 lb. a.i./A of fomesafen from any product containing fomesafen) may be applied per acre per year.
- Region 2: A maximum of 1.5 pts. of RedEagle Fomesafen 2SL (or a maximum of 0.375 lb. a.i./A of fomesafen from any product containing fomesafen) may be applied per acre in ALTERNATE years.
- Region 3: A maximum of 1.25 pts. of RedEagle Fomesafen 2SL (or a maximum of 0.313 lb. a.i./A of fomesafen from any product containing fomesafen) may be applied per acre in ALTERNATE years.
- Region 4: A maximum of 1 pt. of RedEagle Fomesafen 2SL (or a maximum of 0.25 lb. a.i./A of fomesafen from any product containing fomesafen) may be applied per acre in ALTERNATE years.
- Region 5: A maximum of 0.75 pt. of RedEagle Fomesafen 2SL (or a maximum of 0.1875 lb. a.i./A of fomesafen from any product containing fomesafen) may be applied per acre in ALTERNATE years.

### **Region Boundaries/Definitions**

**REGION 1 (Maximum Rate 1.5 pts./A per year)** - Includes the following states or portion of states where RedEagle Fomesafen 2SL may be applied: Alabama, Arkansas, Florida (except Miami-Dade county), Georgia, Louisiana, Mississippi, Missouri (counties of Bollinger, Butler, Cape Girardeau, Dunklin, Madison, Mississippi, New Madrid, Pemiscot, Perry, Ripley, Scott, Stoddard and Wayne), North Carolina, Oklahoma (East of U.S. Highway 75 and East of Indian Nation Parkway), South Carolina, Tennessee, and Texas (includes area East of U.S. Highway 77 to State Road 239 including all of Calhoun County).

**REGION 2 (Maximum Rate 1.5 pts./A, alternate years)** - Includes the following states or portion of states where RedEagle Fomesafen 2SL may be applied: Delaware, Kentucky, Maryland, Virginia, West Virginia, South of Interstate 70 in the following states: Illinois, Indiana and Ohio and all areas South of Interstate 80 to the intersection of U.S. Highway 15 and East of U.S. Highway 15 and U.S. Highway 522 in Pennsylvania.

**REGION 3 (Maximum Rate 1.25 pts./A, alternate years)** - Includes the following states or portion of states where RedEagle Fomesafen 2SL may be applied: Connecticut, Iowa, Maine, Massachusetts, Missouri (all counties except for those listed in Region 1), New Hampshire, New Jersey, New York, Pennsylvania (all areas except those listed in Region 2), Rhode Island, Vermont and Wisconsin (South of U.S. Highway 18 between Prairie Du Chien and Madison, and South of Interstate 94 between Madison and Milwaukee), and North of Interstate 70 in following states: Indiana, Illinois and Ohio.

**REGION 4 (Maximum Rate 1 pint per acre, alternate years)** - Includes the following states or portion of states where RedEagle Fomesafen 2SL may be applied: Kansas (all counties East of or intersected by U.S. Highway 281), Michigan (Southern Peninsula), Minnesota (all areas South of Interstate 94), Nebraska (all counties East of or intersected by U.S. Highway 281), and Wisconsin (all areas, except those in Region 3, South of Interstate 94 from Minnesota state line to Eau Claire and South of U.S. Highway 29 from Eau Claire to Green Bay plus Barron, Chippewa, Clark, Door, Dunn, Eau Claire, Kewaunee, Marathon, Menominee, Oconto, Polk, Shawano, and St. Croix counties. The following counties are excluded: Adams, Marquette, Portage, Waupaca, Waushara and Wood). North Dakota (all areas East of Interstate 29 from Fargo South to the South Dakota state line). South Dakota (all areas East of Interstate 29 from the North Dakota state line to Watertown, all areas East of Highway 81 from Watertown to Madison and all areas East and South of State Road 34 and U.S. Highway 281 to the Nebraska state line).

**REGION 5 (Maximum Rate 0.75 pint per acre, alternate years)** - Includes the following states or portion of states where RedEagle Fomesafen 2SL may be applied: North Dakota (all areas East of U.S. Highway 281 except those areas in Region 4), South Dakota (all areas East of U.S. Highway 281 except those areas in Region 4) and Minnesota (all areas South of U.S. Highway 2 except those areas in Region 4).

### Replanting

If replanting is necessary in fields previously treated with RedEagle Fomesafen 2SL, the field may be replanted to cotton, dry beans, snap beans or soybeans. During replanting, a minimum of tillage is recommended to preserve the herbicide barrier for effective weed control. Do not apply a second application of RedEagle Fomesafen 2SL or other fomesafen containing product as crop injury or illegal residues may occur in harvested crops. If tank-mix combinations were used, refer to product labels for any additional replanting instructions.

### **ROTATIONAL CROP RESTRICTIONS**

The following rotational crops may be planted after applying RedEagle Fomesafen 2SL at specified rates:

Crop To Be Planted	Minimum Rotation Interval (Months After Last RedEagle Fomesafen 2SL Application)
Cotton, dry beans, snap beans, and soybeans	0
Small grains such as wheat, barley, rye	4
Corn*, peanuts, peas, rice, seed corn	10
To avoid crop injury do not plant alfalfa, sunflowers, sugar beets, sorghum** or any other crop within 18	
Do not graze rotated small grain crops or harvest forage or straw for liv	estock

not graze rotated small grain crops or harvest forage or straw for livestock.

\*Use a 12 month minimum rotation interval for popcorn in the states of Ohio, Kentucky, Illinois, Indiana, Iowa, and Region 4 when applied at rates of 1.0 pint per acre or more.

\*Use 18 month minimum rotation interval for sweet corn in the states of Connecticut, Maine, Massachusetts, New Hampshire, New York, Rhode Island, Vermont and Region 5.

\*\*Sorghum may be planted back after 10 months in Region 1.

### USE RATES AND WEEDS CONTROLLED WEEDS CONTROLLED

### Table 1. Weeds Controlled or Partially Controlled\* by Pre-Emergence Activity of RedEagle Fomesafen 2SL at 1 to 1.5 pts./A<sup>1</sup>.

Broadleaf Weeds Controlled	Soil Texture	Organic Matter
Amaranth, Palmer		
Croton, tropic <sup>2</sup>		
Eclipta		
Galinsoga spp.		
Lambsquarters, common		
Morningglory, smallflower		
Nightshade, black		
Nightshade, Eastern black		
Pigweed, redroot		
Pigweed, smooth		
Poinsettia, wild		
Purslane, common

<sup>a</sup>Do not apply in cotyledon stage.

<sup>b</sup>For effective control of this weed it is necessary to use 1% MSO and 2.5% UAN v/v as an adjuvant in Regions 2 and 3 (soybeans only). <sup>c</sup>Partial control.

### SPECIAL USE DIRECTIONS FOR ADDITIONAL WEED PROBLEMS

### Partial Control\* of Annual Grasses (Crabgrass, Goosegrass, Texas Panicum, Broadleaf Signalgrass)

The grasses listed above may be partially controlled by pre-emergence applications of RedEagle Fomesafen 2SL at 1-1.5 pts./A.

The grasses listed below may be partially controlled by post-emergence applications of RedEagle Fomesafen 2SL at 1-1.5 pts./A.				
Barnyardgrass	Signalgrass, broadleaf	Crabgrass	Foxtail (Giant, Green, Yellow)	
Goosegrass	Johnsongrass, Seedling	Panicum, Fall	Panicum, Texas	

### **Partial Control\* of Perennial Weeds**

Use of RedEagle Fomesafen 2SL post-emergence at rates of 1-1.5 pts./A will aid in suppressing the above-ground portions of the weeds listed below until crop canopy can assist in suppression. Perennial weeds continue to regrow from underground rootstocks even if aboveground foliage is temporarily controlled or retarded. Even though RedEagle Fomesafen 2SL and crop competition can suppress perennial weeds for a growing season, the rootstocks will continue to live and reestablishment will occur in subsequent years.

Milkweed, (Climbing & Honeyvine)

COTTON

Bindweed (Field & Hedge) Trumpetcreeper

\*Partial control means significant activity but not always at a level considered acceptable for commercial weed control.

### **CROP USE DIRECTIONS**

**Pre-Emergence Application:** Apply RedEagle Fomesafen 2SL pre-emergence at 1-1.5 pts./A in cotton in Region 1 for control or partial control of the weeds listed in Table 1. Apply as a pre-emergence treatment only to coarse textured soils (sandy loam, loamy sand, sandy clay loam). **Do not** apply as a pre-emergence treatment to medium or fine-textured soils as crop injury will likely occur.

To broaden the weed control spectrum, RedEagle Fomesafen 2SL may be tank mixed with other pre-emergence herbicides such as Caparol<sup>®</sup>, Cotoran<sup>®</sup>, Direx<sup>®</sup>, Karmex<sup>®</sup>, Solicam<sup>®</sup>, or Staple<sup>®</sup>. For control of emerged weeds, RedEagle Fomesafen 2SL may be tank mixed with a burndown herbicide such as Gramoxone Inteon<sup>™</sup> or glyphosate brands (such as Touchdown<sup>®</sup>, Roundup<sup>®</sup>) labeled in cotton. In reduced tillage plantings, RedEagle Fomesafen 2SL can be applied up to 14 days prior to planting or at planting with a burndown herbicide. Refer to the tank-mix partner label for use directions, restrictions and limitations. The most restrictive product labeling applies. Cotton plants are tolerant to pre-emergence applications of RedEagle Fomesafen 2SL when applied at specified rates and to coarse textured soil types. Some crinkling or spotting of cotton foliage or stunting may occur, especially if heavy rainfall occurs during or soon after cotton emergence, but cotton plants normally outgrow these effects and develop normally.

Cotton foliage is not tolerant to RedEagle Fomesafen 2SL. Do not apply RedEagle Fomesafen 2SL over the top of emerged cotton as unacceptable cotton injury will occur.

**Post-Directed Application:** Apply RedEagle Fomesafen 2SL in emerged cotton as a post-directed treatment using precision postdirected, hooded or shielded application equipment to provide complete coverage of emerged weeds. Apply RedEagle Fomesafen 2SL at 1-1.5 pints per acre in a minimum of 10 gallons spray solution per acre. Applications may be made broadcast or banded. Postdirected applications of RedEagle Fomesafen 2SL will provide contact control of labeled emerged weeds and residual pre-emergence control of labeled weeds (once activated by rainfall or irrigation). See previous label sections for a list of weeds controlled, recommended application rates, weed growth stages, and application directions.

Apply RedEagle Fomesafen 2SL with a non-ionic surfactant at 0.25 to 0.5% v/v, or crop oil concentrate at 1% v/v to emerged weeds. Do not add liquid nitrogen (28% or similar) to RedEagle Fomesafen 2SL, or RedEagle Fomesafen 2SL tank mixes in cotton. To broaden the weed control spectrum, tank mix post-directed applications of RedEagle Fomesafen 2SL with other labeled post-directed herbicides such as Caparol, DSMA, Direx, Dual MAGNUM<sup>®</sup>, Envoke<sup>®</sup>, Karmex, Layby<sup>™</sup> Pro, MSMA, Sequence<sup>®</sup>, or Suprend<sup>®</sup>. When applied with hooded or shielded sprayers, RedEagle Fomesafen 2SL and RedEagle Fomesafen 2SL tank mixes may be applied with burndown products such as Gramoxone Inteon, Sequence or glyphosate brands (such as Touchdown, Roundup) labeled for in crop

application in cotton. Refer to the tank-mix partner label for use directions, restrictions and limitations. The most restrictive product labeling applies.

Cotton foliage is not tolerant to RedEagle Fomesafen 2SL applications. Avoid contact to cotton foliage as unacceptable injury will occur. Calibrate application equipment (spray pressure, nozzle type and configuration, and orifice size) to avoid fine spray droplets contacting green cotton stems and foliage.

**Post-Directed Application Timing in Cotton:** RedEagle Fomesafen 2SL may be applied to cotton at least 6 inches in height through layby as a post-directed application. All post-directed applications must avoid spray contact with any green non-barked parts of the cotton plant or foliage as unacceptable injury will occur. Follow the application timing instructions below for post-directed applications in cotton.

**Shield and Hooded Applications:** Make a precision post-directed RedEagle Fomesafen 2SL application to the base of the cotton plant avoiding contact with the cotton stem or foliage when cotton is at least 6 inches in height to avoid cotton injury. Use only hooded or shielded spray equipment to apply RedEagle Fomesafen 2SL in cotton that is 6 inches to 12 inches in height. Adjust nozzles to provide full coverage of emerged target weeds.

**Layby Applications:** Make a post-directed RedEagle Fomesafen 2SL application to the base of the cotton plant avoiding contact with any non-barked portion of the cotton plant or foliage. Use precision post-directed equipment or hooded or shielded sprayers on cotton that has developed a minimum of 4 inches of brown bark through layby. Configure application equipment to provide full coverage of emerged target weeds.

### **Restrictions - Cotton**

- Do not apply RedEagle Fomesafen 2SL later than 70 days before harvest.
- Do not apply more than 1.5 pints per acre of RedEagle Fomesafen 2SL in any year.

### Special Use Directions for the Suppression of Woollyleaf Bursage (Lakeweed), Ambrosia grayi, in Texas

Apply RedEagle Fomesafen 2SL to cultivated areas of cropland in the fall or spring as a spot treatment at a rate of 1.5 pints per acre and incorporate to a depth of 2-3 inches for suppression of woollyleaf bursage.

Make applications with ground equipment.

The use of adjuvants, as specified under the Spray Additives section, will significantly improve the initial burndown of any emerged woollyleaf bursage, but this effect is only temporary. Therefore, an adjuvant may be used if desired, but is not necessary.

Significant suppression may not be seen until 6-8 months after application, but should then continue for at least 2 years after application. Cotton or soybeans may be planted in treated areas. Under certain conditions, significant damage may occur to cotton planted within 18 months of application. A 3-year interval from last application to planting is required for all other crops.

- Do not make more than one application of RedEagle Fomesafen 2SL per year.
- Do not apply more than 1.5 pints per acre of RedEagle Fomesafen 2SL in any year.
- If two consecutive year applications are made, allow a 2 year interval before another application.

### DRY BEANS AND SNAP BEANS

**Pre-Plant Surface and Pre-Emergence Application:** Apply RedEagle Fomesafen 2SL as a Pre-Plant surface or pre-emergence application in Regions 1, 2, 3, and 4 only for control or partial control of the weeds listed in Table 1. RedEagle Fomesafen 2SL can be applied alone, or tank mixed or followed sequentially with other labeled dry bean or snap bean herbicides to broaden the weed control spectrum or control newly emerged weeds. Refer to the **Tank Mix and Sequential Application** section for additional information.

**NOTE:** Treated soil that is splashed onto newly emerged seedings may result in temporary crop injury but plants normally outgrow these effects and develop normally.

**Post-Emergence Application:** Apply as a post-emergent broadcast application in Regions 1, 2, 3, 4 and 5 for control or partial control of the weeds listed in Table 2 and in the **Special Use Directions For Additional Weed Problems** section. Application rate depends on weed species and growth stage. Two applications may be made if necessary but not to exceed the maximum rate specified per geographic region. (Refer to "Regional Boundaries/Definition" Section of this label for Definition of Specified Geographic Regions). Refer to the Spray Additive section for recommended spray additives. Use of crop oil concentrate can improve weed control but may slightly reduce crop tolerance. Do not use UAN (28% or similar) or ammonium sulfate on dry beans or snap beans as severe crop injury may occur. Apply when dry beans or snap beans have at least one fully expanded trifoliate leaf. RedEagle Fomesafen 2SL can be applied alone or in tank mix with other labeled dry bean or snap bean post-emergence herbicides to broaden the weed control spectrum. Refer to the **Tank Mix and Sequential Application** section. Some bronzing, crinkling or spotting of dry bean or snap bean leaves may occur following post-emergent applications, but dry beans and snap beans soon outgrow these effects and develop normally.

### Tank Mix and Sequential Applications for Dry Beans and Snap Beans

RedEagle Fomesafen 2SL can be used sequentially or in tank mix with the following products: Assure II<sup>®</sup>, Basagran<sup>®</sup>, Dual MAGNUM, Eptam<sup>®</sup>, Poast<sup>®</sup>, Prowl<sup>®</sup>, Pursuit<sup>®</sup>, Raptor<sup>®</sup>, or Treflan<sup>®</sup>. Under certain conditions, the mixture of RedEagle Fomesafen 2SL with one or more of the above mentioned broadleaf herbicides may cause a reduction in activity of any Post-Emergence grass herbicide in the mixture.

For sequential applications, allow 2-3 days after the application of the post-emergence grass herbicide before applying or RedEagle Fomesafen 2SL mixtures. Where RedEagle Fomesafen 2SL or the RedEagle Fomesafen 2SL mixture is applied first, apply the grass herbicide when the grass weeds begin to develop new leaves (generally around 7 days).

**NOTE:** Tank-mix applications can result in increased crop injury as compared to either product used alone. Always read and follow the use directions, restrictions and limitations for all products whether used alone, sequentially or in a tank mix. The most restrictive labeling of any product used applies.

### **Restrictions – Dry Beans and Snap Beans**

- Refer to "Regional Boundaries/Definition" Section of this label for the maximum rate of RedEagle Fomesafen 2SL (or other fomesafen containing products) that may be applied in each geographic region.
- Do not apply to any field in Regions 2, 3, 4 or 5 more than once every two years.
- For snap beans: Do not exceed 1.5 pints of RedEagle Fomesafen 2SL per acre in any one year and also adhere to the maximum rate that may be applied in each geographic region (refer to the "Regional Boundaries/Definition" Section of this label). Do not graze treated areas or harvest for forage or hay. Do not utilize hay or straw for animal feed or bedding. Do not apply within 30 days of harvest.
- For dry beans: Do not exceed 1.5 pints of RedEagle Fomesafen 2SL per acre in any one year and also adhere to the maximum specified rate that may be applied in each geographic region (See "Regional Boundaries/Definition" Section of this label). Do not graze animals on green forage or stubble. Do not utilize hay or straw for animal feed or bedding. Do not apply within 45 days of harvest.

### SOYBEANS

**Pre-Plant Surface and Pre-Emergence Application:** Apply RedEagle Fomesafen 2SL as a Pre-Plant surface or pre-emergence application in Regions 1, 2, 3, and 4 only for control or partial control of the weeds listed in Table 1. RedEagle Fomesafen 2SL can be applied alone or tank mixed or followed sequentially with other labeled soybean herbicides to broaden the weed control spectrum or control newly emerged weeds. Refer to the **Tank Mix and Sequential Application** section for additional information.

For control of emerged weeds, RedEagle Fomesafen 2SL may be tank mixed with a burndown herbicide such as Gramoxone Inteon or glyphosate brands (such as Touchdown or Roundup) labeled in soybeans. In reduced tillage plantings, RedEagle Fomesafen 2SL can be applied up to 14 days prior to planting or at planting with a burndown herbicide.

**Post-Emergence Application:** Apply RedEagle Fomesafen 2SL as a Post-Emergence broadcast application in Regions 1, 2, 3, 4 and 5 for control or partial control of weeds listed in Table 2 and in the **Special Use Directions For Additional Weed Problems** section. Application rate depends on weed species and growth stage. Refer to the Spray Additive section for spray additives. To enhance Post-Emergence control of susceptible broadleaf weeds (**soybeans only**) in Regions 2, 3, 4 and 5 (see "Regional Boundaries/Definition" Section of this label). RedEagle Fomesafen 2SL can be used with a minimum of 2.5% liquid nitrogen (28% or similar) or a minimum of 10 pounds ammonium sulfate per 100 gallons of spray volume. RedEagle Fomesafen 2SL can be applied alone or in combination with other labeled soybean Post-Emergence herbicides to broaden the weed control spectrum. Refer to the **Tank Mix and Sequential Application** section. Some bronzing, crinkling or spotting of soybean leaves may occur following post-emergent applications, but soybeans soon outgrow these effects and develop normally.

### Tank Mix and Sequential Applications For Soybeans

RedEagle Fomesafen 2SL can be used sequentially or in tank mix with one or more of the following products: Assure II, Basagran, Boundary®, Butyrac®, Classic®, Dual MAGNUM, Dual II MAGNUM®, FirstRate®, Fusilade® DX, Fusion®, Glyphosate (such as Touchdown, Roundup or Glyphomax<sup>™</sup>), Gramoxone Inteon, Harmony® GT XP, Pursuit, Poast, Poast Plus®, Prowl, Raptor, Resource®, Select®, Sequence, Scepter®, and Synchrony® STS®.

Under certain conditions, the mixture of RedEagle Fomesafen 2SL with one or more of the above mentioned broadleaf herbicides may cause a reduction in activity of any Post-Emergence grass herbicide in the mixture. For sequential applications allow 2-3 days after the application of the post-emergence grass herbicide before applying RedEagle Fomesafen 2SL or RedEagle Fomesafen 2SL mixtures. Where RedEagle Fomesafen 2SL or the RedEagle Fomesafen 2SL mixture is applied first, apply the Post-Emergence grass herbicide when the grass weeds begin to develop new leaves (generally around 7 days).

### NOTE:

- Tank-mix applications can result in increased crop injury as compared to either product used alone.
- Do not exceed 1 fl. oz. of Butyrac per acre in mixture with RedEagle Fomesafen 2SL.
- Do not exceed 0.25 oz./A of Synchrony STS herbicide in the tank with labeled rates of RedEagle Fomesafen 2SL on non-STS varieties. This tank mix can be applied Post-Emergence to any soybean variety for additional broadleaf weed control. Refer to the Synchrony STS label for more information and crop rotation restrictions.

• Always read and follow the recommendations, restrictions and limitations for all products whether used alone, sequentially or in a tank mix. The most restrictive labeling of any product used applies.

### Roundup Ready® (Glyphosate Tolerant) Soybean Tank Mixes

RedEagle Fomesafen 2SL at 6-12 oz./A, can be tank mixed with glyphosate products (such as Touchdown or Roundup) that are labeled for Roundup Ready (glyphosate tolerant) soybeans for improved Post-Emergence control of many weeds such as morningglory spp., hemp sesbania, waterhemp, and black nightshade which are known to have tolerance to glyphosate, but are susceptible to RedEagle Fomesafen 2SL.

### FOLLOW THE RECOMMENDATIONS ON THE GLYPHOSATE PRODUCT LABEL FOR THE USE OF SPRAY ADDITIVES IN THIS TANK MIX.

Do not allow this tank mix to move off target as contact by even minute quantities can cause severe damage or death to any non-target vegetation.

**NOTE:** Post-Emergence application of this tank mix on soybean varieties which do not contain the Roundup Ready gene will result in severe crop injury or death of the soybean crop. Always read and follow the use directions, restrictions and limitations for all products used. The most restrictive labeling of any product applies.

### **Restrictions – Soybeans**

- Refer to "Regional Boundaries/Definition" Section of this label for the maximum rate of RedEagle Fomesafen 2SL (or other fomesafen containing products) that may be applied in each geographic region. Do not apply to any field in Regions 2, 3, 4 or 5 more than once every two years.
- Do not exceed 1.5 pints of RedEagle Fomesafen 2SL per acre in any one year and also adhere to the maximum rate that may be applied in each geographic region (refer to the "Regional Boundaries/Definition" Section of this label). Do not graze treated areas or harvest for forage or hay. Do not apply within 45 days of harvest.

### AERIAL SPRAY DRIFT MANAGEMENT ADVISORY

### SPRAY DRIFT MANAGEMENT

AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR. The interaction of many equipment and weather related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions. The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

- 1. The distance of the outer most nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.
- 2. Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees.
- 3. Where states have more stringent regulations, they should be observed.
- 4. The applicator should be familiar with and take into account the information covered in the **AERIAL DRIFT REDUCTION ADVISORY INFORMATION.**

### AERIAL DRIFT REDUCTION ADVISORY INFORMATION

#### **IMPORTANCE OF DROPLET SIZE**

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (See **Wind, Temperature and Humidity,** and **Temperature Inversion** sections of this label).

### CONTROLLING DROPLET SIZE

- Volume Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- **Pressure** Use the lower spray pressures recommended for the nozzle. Higher pressure reduces droplet size and does not improve canopy penetration. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- Number of nozzles Use the minimum number of nozzles that provide uniform coverage.
- Nozzle Orientation Orienting nozzles so that the spray is released backwards, parallel to the airstream will produce larger droplets than other orientations. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- Nozzle Type Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce larger droplets than other nozzle types.

### **BOOM LENGTH**

For some use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

### **APPLICATION HEIGHT**

Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

### SWATH ADJUSTMENT

When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller drops, etc.).

### WIND

Drift potential is lowest between wind speeds of 2-10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential.

**NOTE:** Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

### **TEMPERATURE AND HUMIDITY**

When making applications in low relative humidity set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

### **TEMPERATURE INVERSIONS**

Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions.

Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

### SENSITIVE AREAS

The pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

### Table 3. Scientific Names of Weeds in the RedEagle Fomesafen 2SL label

COMMON NAME	SCIENTIFIC NAME
Mexicanweed	Caperonia castaneifolia
Milkweed, Climbing	Sarcostemma cynanchoides
Milkweed, Honeyvine	Ampelamus albidus
Morningglory,	Ipomoea quamoclit
Entireleaf	Ipomoea hederacea var. integriuscula
lvyleaf	Ipomoea hederacea var. hederacea
Purple Moonflower	Ipomoea turbinata
Red (Scarlet)	Ipomoea coccinea
Smallflower	Jacquemontia tamnifolia
Pitted (Smallwhite)	Ipomoea lacunosa
Tall (Common)	Ipomoea purpurea
Palmleaf (Willowleaf)	Ipomoea wrightii
Mustard, Wild	Brassica kaber
Nightshade, Black	Solanum nigrum
Nightshade Eastern Black ,	Solanum ptychanthum
Nightshade, Hairy	Solanum physalifolium
Nutsedge, Yellow	Cyperus esculentus
Panicum, Fall	Panicum dichotomiflorum
Panicum, Texas	Panicum texanum
Pigweed, Amaranth	Amaranthus palmeri
Pigweed, Redroot	Amaranthus retroflexus
Pigweed, Smooth	Amaranthus hybridus
Poinsettia, Wild	Euphorbia heterophylla
Purslane, Common	Portulaca oleracea
Pusley, Florida	Richardia scabra
Ragweed, Common	Ambrosia artemisiifolia
Ragweed, Giant	Ambrosia trifida
Redweed	Melochia corchorifolia
Sesbania, Hemp	Sesbania exaltata
Sicklepod	Cassia obtusifolia
Sida, Prickly	Sida spinosa
Signalgrass, Broadleaf	Brachiaria platyphylla
Smartweed Pennsylvania,	Polygonum pennsylvanicum
Smellmelon	Cucumis melo
Spurge, Prostrate	Euphorbia humistrata
Spurge, Spotted	Euphorbia maculata
Starbur, Bristly	Acanthospermum hispidum
Sunflower, Common	Helianthus annuus
Trumpetcreeper	Campsis radicans
Velvetleaf	Abutilon theophrasti
Venice Mallow	Hibiscus trionum
Waterhemp, Common	Amaranthus rudis
Waterhemp, Tall	Amaranthus tuberculatus
Witchweed	Striga asiatica
Yellow Rocket	Barbarea vulgaris
	Darbarea valgaris

#### STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

**Prohibitions:** Open dumping is prohibited. Do not reuse empty container.

**Pesticide Storage:** Store above 32°F in original containers only. If product freezes, return to room temperature and agitate to reconstitute. Keep container closed when not in use. Do not store near food or feed. In case of spill or leak on floor or paved surfaces, soak up with sand, earth or synthetic absorbent. Remove to chemical waste area.

**Pesticide Disposal:** Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance. **CONTAINER DISPOSAL** 

**Metal Containers:** Nonrefillable container. Do not reuse or refill this container. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill or by other procedures approved by state and local authorities.

**Plastic Containers:** Nonrefillable container. Do not reuse or refill this container. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, by incineration or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

### Bulk and Mini-Bulk Containers

Container Disposal: REFILLABLE CONTAINER. REFILL WITH PESTICIDE ONLY. DO NOT REUSE THE CONTAINER FOR ANY OTHER PURPOSE.

**Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller.** To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times.

**Container Precautions:** Before refilling, inspect thoroughly for damage, such as cracks, punctures, bulges, dents, abrasions and damaged or worn threads on closure devices. After filling and before transporting, check for leaks. Do not refill or transport damaged or leaking container.

#### CONTAINER IS NOT SAFE FOR FOOD, FEED OR DRINKING WATER

### WARRANTY AND DISCLAIMER STATEMENT

**NOTICE:** Read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of Liability before using this product. If terms are not acceptable, return the unopened product container at once.

By using this product, user or buyer accepts the following Conditions, Disclaimer of Warranties and Limitations of Liability. Treatment of highly mechanically damaged seed, or seed of known low vigor and poor quality may result in reduced germination and/or reduction of seed and seedling vigor. Treat and conduct germination tests on a small portion of seed before committing the total seed lot to a selected chemical treatment. Due to seed quality conditions beyond the control of RedEagle International LLC, no claims are made to guarantee germination of carry-over seed.

CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of RedEagle International LLC. To the extent allowable under State law, all such risks shall be assumed by the user or buyer.

DISCLAIMER OF WARRANTIES: TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, REDEAGLE INTERNATIONAL LLC MAKES NO WARRANTIES, EXPRESS OR IMPLIED, OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE OR OTHERWISE, THAT EXTEND BEYOND THE STATEMENTS MADE ON THIS LABEL. No agent of RedEagle International LLC is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, REDEAGLE INTERNATIONAL LLC DISCLAIMS ANY LIABILITY WHATSOEVER FOR SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

LIMITATIONS OF LIABILITY: TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER FOR ANY AND ALL LOSSES, INJURIES OR DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, WHETHER IN CONTRACT, WARRANTY, TORT, NEGLIGENCE, STRICT LIABILITY OR OTHERWISE, SHALL NOT EXCEED THE PURCHASE PRICE PAID, OR AT REDEAGLE INTERNATIONAL LLC'S ELECTION, THE REPLACEMENT OF PRODUCT.
