NOTICE OF PESTICIDE:

**X** Registration

(under FIFRA, as amended)

---

**Term of Issuance:**

Unconditional

**Name of Pesticide Product:**

ENV503 Biofungicide Wettable Powder

---

**Name and Address of Registrant (include ZIP Code):**

Envera, LLC

220 Garfield Ave.

West Chester, PA  19380

---

**Note:** Changes in labeling differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Biopesticides and Pollution Prevention Division prior to use of the label in commerce. In any correspondence on this product, always refer to the above EPA Registration Number.

---

On the basis of information furnished by the registrant, the above named pesticide is hereby registered under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA or the Act).

Registration is in no way to be construed as an endorsement or recommendation of this product by the U.S. Environmental Protection Agency (EPA). In order to protect health and the environment, the Administrator, on his or her motion, may at any time suspend or cancel the registration of a pesticide in accordance with the Act. The acceptance of any name in connection with the registration of a product under the Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by others.

This product is unconditionally registered in accordance with FIFRA section 3(c)(5) provided that you:

1. Submit and/or cite all data required for registration or registration review of your product when the EPA requires all registrants of similar products to submit such data.

---

**Signature of Approving Official:**

Jeannine Kausch, Product Manager 92

Microbial Pesticides Branch

Biopesticides and Pollution Prevention Division (7511P)

Office of Pesticide Programs

**Date:**

12/18/2018
2. Submit storage stability and corrosion characteristics (Guidelines 830.6317 and 830.6320) data as these data requirements are not satisfied. A one-year study is required to satisfy these data requirements. You have 18 months from the date of this registration to provide these data to the EPA.

3. Make the following labeling change before you release this product for shipment:
   
   • Revise the EPA Registration Number to read, “EPA Reg. No. 87645-4.”

4. Submit one (1) copy of the final printed labeling for the record before you release this product for shipment.

Should you wish to add/retain a reference to your company’s website on your label, then please be aware that the website becomes labeling under FIFRA and is subject to review by the EPA. If the website is false or misleading, the product will be considered to be misbranded and sale or distribution of the product is unlawful under FIFRA section 12(a)(1)(E). 40 CFR § 156.10(a)(5) lists examples of statements the EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product’s label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the EPA find or if it is brought to our attention that a website contains statements or claims substantially differing from statements or claims made in connection with obtaining a FIFRA section 3 registration, the website will be referred to the EPA’s Office of Enforcement and Compliance Assurance.

Your release for shipment of this product constitutes acceptance of these terms. If these terms are not complied with, this registration will be subject to cancellation in accordance with FIFRA section 6. A stamped copy of the labeling is enclosed for your records. Please also note that the record for this product currently contains the following acceptable Confidential Statement of Formula (CSF):

   • Basic CSF dated 12/11/2018

Any CSFs other than that listed above are superseded.

If you have any questions, please contact Alex Boukedes by phone at (703) 347-0305 or via email at boukedes.alexandra@epa.gov.

Sincerely,

Jeannine Kausch, Product Manager 92

Not for sale or use after: {Date stamped/placed on labeling will be 6 months after the date of manufacture}
PRECAUTIONARY STATEMENTS
PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Waterproof gloves
- Shoes plus socks

Mixers/loaders and applicators must wear a minimum of a NIOSH-approved particulate filtering facepiece respirator with any R or P filter; OR a NIOSH-approved elastomeric particulate respirator with any R or P filter; OR a NIOSH-approved powered air-purifying respirator with an HE filter. Repeated exposure to high concentrations of microbial proteins can cause allergic sensitization.

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

For terrestrial uses: Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater or rinsate.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment and restricted-entry interval. The requirements in this box only apply to the uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of four (4) hours.

EXCEPTION: If the product is soil injected or soil incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas (that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water) is:
- Coveralls
- Waterproof gloves
- Shoes plus socks

PRODUCT INFORMATION

- Use on Food and Forage Crops
- For Prevention, Control or Suppression of Root and Foliar Diseases
- Activates the Plant’s Defense / Immune System (Induced Systemic Resistance [ISR])
- Contains Plant Growth-Promoting Rhizobacteria (PGPR)
- Quickly Establishes Beneficial Colonies on Roots and Leaves
- Stimulates Healthier Roots and Improves Nutrient Uptake

Product Description:
ENV503 Biofungicide Wettable Powder is a broad spectrum biological fungicide [and bactericide] for the prevention, control or suppression of many soilborne and foliar diseases on the labeled agricultural crops. Apply as a foliar spray or as a soil drench alone or in an alternating spray program with other EPA-registered crop protection products. ENV503
Biofungicide Wettable Powder contains the active ingredient *Bacillus amyloliquefaciens* strain ENV503, a plant growth-promoting rhizobacterium that quickly establishes beneficial colonies on the plant’s roots and leaves. It protects the roots from invading pathogens, stimulates healthier roots and improves nutrient uptake. *Bacillus amyloliquefaciens* strain ENV503 is also known to trigger the plant’s immune system (ISR).

ENV503 Biofungicide Wettable Powder can be used on all plant material and is most effective when applied prior to the onset of disease. Use ENV503 Biofungicide Wettable Powder in combination and/or rotation with chemical fungicides [and bactericides] to enhance disease control and reduce the occurrence of resistance. For use on the labeled field-grown agricultural crops including vegetables, herbs, small fruits, berries, and fruit trees. For use in greenhouse production and hydroponics.

**Modes of Action:**
ENV503 Biofungicide Wettable Powder has multiple modes of action in preventing, controlling or suppressing plant diseases. Its active ingredient, *Bacillus amyloliquefaciens* strain ENV503, produces broad-spectrum antibiotic lipopeptides (iturin) that disrupt pathogen cell-wall formation and is a competitive, fast-colonizing rhizosphere bacterium that occupies the plant’s root hairs and leaves. It also prevents the growth and antagonistic effects of soilborne and foliar pathogens. Finally, *Bacillus amyloliquefaciens* strain ENV503 is known to stimulate phytohormones that trigger the plant’s systemic resistance to disease (Induced Systemic Resistance - ISR), the defense mechanisms of the plant, for prolonged periods of time.

**PGPR (Plant Growth-Promoting Rhizobacteria):**
*Bacillus amyloliquefaciens* strain ENV503 is within the plant growth-promoting rhizobacteria (PGPR) classification. PGPR are free-living bacteria that have beneficial effects on plants as they increase plant productivity and enhance crop fertility, growth and root development.

</table>
INTEGRATED PEST (DISEASE) MANAGEMENT (IPM)
Integrate ENV503 Biofungicide Wettable Powder into an overall disease and pest management strategy whenever fungicide [and bactericide] use is necessary. Apply ENV503 Biofungicide Wettable Powder alone or in combination and/or rotation with chemical fungicides [and bactericides]. This will result in less susceptibility to disease and overall reduction in the use of chemical fungicides [and bactericides]. Consult local agricultural authorities for specific IPM strategies developed for your crop(s) and location.

RESISTANCE-MANAGEMENT RECOMMENDATIONS
For resistance management, ENV503 Biofungicide Wettable Powder contains a Group 44 fungicide/bactericide. Any fungal/bacterial population may contain individuals naturally resistant to ENV503 Biofungicide Wettable Powder and other Group 44 fungicides/bactericides. A gradual or total loss of pest control may occur over time if these fungicides/bactericides are used repeatedly in the same fields. Appropriate resistance-management strategies should be followed.

To delay fungicide/bactericide resistance, take one or more of the following steps:
- Rotate the use of ENV503 Biofungicide Wettable Powder or other Group 44 fungicides/bactericides within a growing season sequence with different groups that control the same pathogens.
- Use tank mixtures with fungicide/bactericides from a different group that are equally effective on the target pest when such use is permitted. Use at least the minimum application rate as labeled by the manufacturer.
- Adopt an integrated disease management program for fungicide/bactericide use that includes scouting, uses historical information related to pesticide use, and includes crop rotation, and which considers host plant resistance, impact of environmental conditions on disease development, disease thresholds, as well as cultural, biological and other chemical control practices.
- Where possible, make use of predictive disease models to effectively time fungicide/bactericide applications. Note that using predictive models alone is not sufficient to manage resistance.
- Monitor treated fungal/bacterial populations for resistance development.
- Contact your local extension specialist or certified crop advisor for any additional pesticide resistance-management and/or IPM recommendations for specific crops and pathogens.

For further information or to report suspected resistance, contact Envera, LLC at 484-593-4002. You can also contact your pesticide distributor or university extension specialist to report resistance.

PRE-HARVEST INTERVAL
ENV503 Biofungicide Wettable Powder can be applied up to and including the day of harvest for all crops on this label.

APPLICATION INSTRUCTIONS
Apply ENV503 Biofungicide Wettable Powder with all types of sprayers or with other equipment used for making ground applications. Apply ENV503 Biofungicide Wettable Powder as a spray, a drench, a dip, via chemigation or other methods as specified on this label. Fit sprayers applying ENV503 Biofungicide Wettable Powder with a strainer size of 50-mesh or larger.

Mixing Instructions:
Special care must be taken when tank mixing.
1) Prepare no more spray mixture than is required for the immediate operation.
2) Thoroughly clean spray equipment before using this product. Remove scale, pesticide residues, and other foreign matter from the chemical supply tank and entire injector system. Flush with clean water. Failure to provide a clean tank, void of scale or residues, can cause product to lose effectiveness or strength.
3) Vigorous agitation is necessary to dissolve and disperse the product. Maintain maximum agitation throughout the spray operation.
4) ENV503 Biofungicide Wettable Powder must be diluted with water prior to use.
5) Make a slurry in plain water prior to adding to spray tank.
6) Determine the treatment rates as indicated in the directions for use and make proper dilutions.
7) Partially fill the spray tank with clean water to the ¼ level and then add the specific amount of ENV503 Biofungicide Wettable Powder to the tank as required. Add the remaining water. Mix thoroughly. Maintain agitation continuously while spraying.
8) Check pH of tank mix solution prior to adding ENV503 Biofungicide Wettable Powder. DO NOT mix into tank solution if pH is below 4 or above 9.
9) DO NOT allow spray mixture to stand for prolonged periods of time or overnight.
10) ENV503 Biofungicide Wettable Powder is compatible with many commonly used pesticides, fertilizers, adjuvants and surfactants; however, do not combine with other materials if there is no previous experience or use of the combination to show it is physically compatible and non-injurious under your use conditions. Check for compatibility with other products.

Application to Plant Grown in Nurseries, in Greenhouses and in Shadehouses, and to Ornamental Plants:
Spray application: Mix 0.5 to 1.5 lb. of ENV503 Biofungicide Wettable Powder per 100 gal. of water and apply as a foliar
spray of sufficient volume to wet the entire plant with minimal runoff. Begin preventative applications at plant emergence and repeat every 3 - 28 days as needed (every 3 - 7 days if disease pressure is high or environmental conditions are highly favorable to disease outbreak or 10 - 28 days if disease pressure is low or environmental conditions are less conducive to disease outbreak).

**Drench application:** Mix 0.5 to 1.5 lb. of ENV503 Biofungicide Wettable Powder per 100 gal. of water and apply as a drench or coarse spray to soil or other growing media in pots, flats, plugs, trays, or planting beds for control or suppression of soilborne diseases of seedlings, cuttings, bedding plants, and transplants (including vegetables and other transplanted food crops). Make first application at or immediately before seeding, sticking, germination, or transplanting. Repeat applications every 14 - 28 days as needed.

Transplants can be treated immediately before transplanting into field soils to protect against damping-off and other diseases that reduce plant establishment.

**Cutting or root dip:** Dip basal end of cuttings or bare roots (individually or in bunches) in a suspension of 0.5 to 1.5 lb. of ENV503 Biofungicide Wettable Powder per gal. of water. Immerse for 5 - 10 seconds immediately before planting.

**Chemigation:** Mix 0.5 to 1.5 lb. of ENV503 Biofungicide Wettable Powder per 100 gal. of water and apply via drip, handheld, or sprinkler irrigation systems. Refer to “Chemigation Instructions” for more details.

HOW TO APPLY TO FIELD CROPS

Transplant Water Applications:
Mix with transplant water. Drench at the time of planting plug, starter plant or bare-root transplant in field in transplant water. Alternatively, for bare-root transplants, soak in the solution 1 to 5 minutes and plant immediately.

In-Furrow:
Apply as an in-furrow spray, in sufficient water, to obtain thorough coverage of the open furrow, and then cover soil. Apply at time of planting plug, starter plant or cutting. In-furrow applications are more effective against soilborne diseases that may develop later in the growing season.

Band:
Spray directly onto soil using single or multiple nozzles. Adjust to provide thorough coverage of the soil surface and surrounding plants. Limit band to 7” or less. Apply prior to plastic. Begin applications when environmental conditions are conducive to disease development. Apply on 7- to 14-day intervals or as specified on this label.

Drip Irrigation:
Add to stock solution. Do not mix with concentrated acids or if pH of solution is below 4 or above 9. Use all the solution on the same day. Inject during the last half of the irrigation cycle so that ENV503 Biofungicide Wettable Powder gets into the root zone and is not lost to deep percolation. Begin applications when environmental conditions are conducive to disease development. Apply on 7- to 14-day intervals or as specified on this label.

Sprinkler or Flood (Basin), Furrow, and Border Irrigation:
Use through sprinkler (e.g., center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set or hand move systems) or flood (basin), furrow, and border irrigation systems. Begin applications when environmental conditions are conducive to disease development. Apply on 7- to 14-day intervals or as specified on this label.

CHEMIGATION INSTRUCTIONS

Overall Requirements:
1) Apply this product only through sprinkler (including center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set or hand move); flood (basin), furrow or border; or drip (trickle) irrigation systems. Do not apply this product through any other type of irrigation system.
2) Crop injury, lack of effectiveness or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.
3) If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.
4) Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.
5) A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Specific Requirements for Chemigation Systems Connected to Public Water Systems:
1) Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
2) Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to
Specific Requirements for Drip (Trickle) Chemigation:
1) The system must contain a functional check valve, vacuum relief valve and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
2) The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3) The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4) The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
5) Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
6) Do not apply when wind speed favors drift beyond the area intended for treatment.

Specific Requirements for Sprinkler Chemigation:
1) The system must contain a functional check valve, vacuum relief valve and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
2) The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3) The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4) The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5) The irrigation line or water pump must include a functional pressure switch that will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6) Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7) Do not apply when wind speed favors drift beyond the area intended for treatment.

Specific Requirements for Flood (Basin), Furrow and Border Chemigation:
1) Systems using a gravity flow pesticide dispensing system must meter the pesticide into the water at the head of the field and downstream of a hydraulic discontinuity such as a drop structure or weir box to decrease potential for water source contamination from backflow.
2) Systems utilizing a pressurized water and pesticide injection system must meet the following requirements:
   a. The system must contain a functional check valve, vacuum relief valve and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
   b. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
   c. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
   d. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
   e. The irrigation line or water pump must include a functional pressure switch that will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
   f. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Specific Requirements for Drip (Trickle) Chemigation:
1) The system must contain a functional check valve, vacuum relief valve and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
2) The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3) The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4) The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5) The irrigation line or water pump must include a functional pressure switch that will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6) Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Application Instructions for All Types of Chemigation:
1) Remove scale, pesticide residues, and other foreign matter from the chemical supply tank and entire injector system. Flush with clean water. Failure to provide a clean tank, void of scale or residues, may cause product to lose effectiveness or strength.
2) Determine the treatment rates as indicated in the directions for use and make proper dilutions. Except for drip irrigation that requires the product to be injected during the last half of irrigation cycle, the product can be applied continuously or at any time during the water application.
3) Prepare a solution in the chemical tank by filling the tank with the required water and then adding the product as required.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a dry place out of direct sunlight, away from heat sources and under typical room temperatures. Keep from overheating or freezing.

Pesticide Disposal: Wastes resulting from the use of this product must be disposed of on site or at an approved waste disposal facility.

Container Handling:
Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn, unless allowed by state and local ordinances. If burned, stay out of smoke.

CONDITIONS OF SALE AND WARRANTY
The DIRECTIONS FOR USE of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and must be followed carefully. However, it is impossible to eliminate all risks inherently associated with use of this product. Crop injury, ineffectiveness, or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Envera, LLC, its Supplemental Distributors, or the Seller. To the extent consistent with applicable law, all such risks shall be assumed by the Buyer.

Envera, LLC, its Supplemental Distributors, and the Seller warrant that this product conforms to the compositional description on the label and is reasonably fit for the purposes referred to in the Directions for Use subject to the inherent risks referred to above. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, NEITHER ENVERA, LLC, NOR ITS SUPPLEMENTAL DISTRIBUTORS, NOR THE SELLER, MAKE ANY OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR ANY PARTICULAR PURPOSE OR OF MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THIS WARRANTY DOES NOT EXTEND TO, AND THE BUYER SHALL BE SOLELY RESPONSIBLE FOR, ANY AND ALL LOSS OR DAMAGE THAT RESULTS FROM THE USE OF THIS PRODUCT IN ANY MANNER INCONSISTENT WITH THE LABEL DIRECTIONS.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE BUYER'S EXCLUSIVE REMEDY AND THE EXCLUSIVE LIABILITY OF ENVERA, LLC, ITS SUPPLEMENTAL DISTRIBUTORS, AND THE SELLER FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES, OR INJURIES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, WHETHER OR NOT BASED IN CONTRACT, NEGLIGENCE, STRICT LIABILITY IN TORT OR OTHERWISE, SHALL BE LIMITED, AT THE MANUFACTURER'S OPTION, TO REPLACEMENT OF OR THE REPAYMENT OF THE PURCHASE PRICE FOR THE QUANTITY OF PRODUCT WITH RESPECT TO THE DAMAGES THAT ARE CLAIMED. To the extent consistent with applicable law, when the Buyer suffers losses or damages resulting from the use or handling of this product (including claims based on contract, negligence, strict liability, or other legal theories), the Buyer must promptly notify Envera, LLC, its Supplemental Distributors, or the Seller in writing of any claims to be eligible to receive either remedy stated above. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, IN NO CASE SHALL ENVERA LLC, ITS SUPPLEMENTAL DISTRIBUTORS, OR THE SELLER BE LIABLE FOR CONSEQUENTIAL, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

Envera, LLC, its Supplemental Distributors, and the Seller offer this product, and the Buyer accepts it, subject to the foregoing Conditions of Sale and Warranty that may be varied only by agreement in writing signed by a duly authorized representative of Envera, LLC, its Supplemental Distributors, or the Seller. No employee or agent of Envera, LLC, its Supplemental Distributors, or the Seller is authorized to vary or exceed the terms of this Warranty in any other manner.
ENV503 Biofungicide Wettable Powder

- Intended for Commercial Seed Treatment Use
- [Can Be Used for] [For Use in] Organic Production
- For Prevention or Suppression of Soil Diseases

ACTIVE INGREDIENT:
*Bacillus amyloliquefaciens* strain ENV503*………………………………………………………………………………………………………………0.15%
OTHER INGREDIENTS:……………………………………………………………………………………………………………………………………99.85%
TOTAL:………………………………………………………………………………………………………………………………………………….100.00%

*Contains not less than 6.33 x 10^9 Colony Forming Units (CFU) per gram of product

KEEP OUT OF REACH OF CHILDREN
[See [back panel] [side panel] for additional Precautionary Statements]

EPA Reg. No. 87645-U
[Lot Code / Batch No. ________]
EPA Establishment No.

Net Weight:

Envera, LLC
220 Garfield Ave.
West Chester, PA 19380

Not for sale or use after: {Date stamped/placed on labeling will be 6 months after the date of manufacture}
PRECAUTIONARY STATEMENTS
PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Waterproof gloves
- Shoes plus socks

Mixers/loaders and applicators must wear a minimum of a NIOSH-approved particulate filtering facepiece respirator with any R or P filter; OR a NIOSH-approved elastomeric particulate respirator with any R or P filter; OR a NIOSH-approved powered air-purifying respirator with an HE filter. Repeated exposure to high concentrations of microbial proteins can cause allergic sensitization.

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

For terrestrial uses: Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater or rinsate.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide regulation.

Not for use on agricultural establishments in hopper box, planter box, slurry box or other seed treatment applications at or immediately before planting.

PRODUCT INFORMATION

ENV503 Biofungicide Wettable Powder contains bacteria that colonize the developing root systems of plants, suppressing the disease organisms *Fusarium*, *Rhizoctonia*, and *Aspergillus* that attack those root systems. When used with chemical seed treatments, the combination of the chemicals and ENV503 Biofungicide Wettable Powder provides protection to the roots for a much longer time than with chemicals alone. As the root system develops, the bacteria grow with the roots, extending the protection throughout the growing season. As a result of this protection, a vigorous root system is established by the plant, which often results in more uniform stands and greater yields.

In addition, ENV503 Biofungicide Wettable Powder has been shown to increase the amount of nodulation by nitrogen-fixing bacteria when used on many legumes. This improvement in nodulation is a result of a healthier root system that allows more sites for nodules to form from soilborne, nitrogen-fixing bacteria.

FOR USE AS A SEED TREATMENT

ENV503 Biofungicide Wettable Powder is to be applied as a water-based slurry through standard slurry or mist commercial seed treatment equipment, except on peanuts, soybeans or legume vegetables where it can also be applied as a dry blend. ENV503 Biofungicide Wettable Powder may be used in combination with other EPA-registered seed treatment pesticides. Pre-test for compatibility with other seed treatment products.

Slurry treatments vary depending on mixtures with other components/fungicides, seed type and treating equipment. Check with local distributor/dealer representative for specific use recommendations.

To mix, first add the chemical pesticides to the slurry mix with approximately ½ of the required water. Slowly add the ENV503 Biofungicide Wettable Powder to the slurry until a uniform suspension is obtained. Add the remainder of the required water and maintain continuous agitation. Do not store mixed slurries for longer than 72 hours.

This product does not contain dye. All seed treated commercially with this product must be colored with an EPA-approved dye or colorant of a suitable color to prevent accidental use as food for humans or feed for animals.
The Federal Seed Act requires that bags containing seed treated with this product shall be labeled with the following information: “This seed has been treated with *Bacillus amyloliquefaciens* strain ENV503. Do not use for food, feed, or oil purposes. Store away from feeds and foodstuffs.”

### APPLICATION RATES

**COTTON:**
For suppression of *Rhizoctonia* and *Fusarium* seedling diseases, apply 0.25 oz of ENV503 Biofungicide Wettable Powder per 100 lb of seed.

**LEGUME VEGETABLES, including Green Bean, Snap Bean, Lima Bean, Kidney Bean, Navy Bean, Pinto Bean, Wax Bean, Pole Bean, Garden Pea, Pea and Field Bean (Except Soybean):**
For suppression of root diseases caused by *Rhizoctonia* and *Fusarium*, apply 0.125 oz of ENV503 Biofungicide Wettable Powder per 100 lb of seed as a slurry/mist or as a dry blend with other EPA-registered seed treatment fungicides. For improvement of nodulation by *Rhizobium* in fields where appropriate strains are detectable, apply 0.125 oz of ENV503 Biofungicide Wettable Powder per 100 lb of seed.

**PEANUT:**
For suppression of root diseases caused by *Rhizoctonia, Fusarium, and Aspergillus* and for improvement of nodulation by *Rhizobium*, apply 0.125 oz of ENV503 Biofungicide Wettable Powder per 100 lb of seed as a slurry/mist or as a dry blend with other EPA-registered seed treatment fungicides.

**SOYBEAN:**
For suppression of root diseases caused by *Rhizoctonia* and *Fusarium* and for improvement of nodulation by *Bradyrhizobium*, apply 0.125 oz of ENV503 Biofungicide Wettable Powder per 100 lb of seed as a slurry/mist or as a dry blend with other EPA-registered seed treatment fungicides.

**WHEAT AND BARLEY:**
For suppression of root diseases caused by *Rhizoctonia* and *Fusarium*, apply 0.1 – 0.5 oz of ENV503 Biofungicide Wettable Powder per 100 lb of seed.

**CORN (Field and Sweet):**
For suppression of root diseases caused by *Rhizoctonia* and *Fusarium*, apply 0.1 – 0.5 oz of ENV503 Biofungicide Wettable Powder per 100 lb of seed.

**ALL OTHER AGRICULTURAL SEEDS (Brassica (Cole) Leafy Vegetables, Cucurbits Vegetables, Fruiting Vegetables, Leafy Vegetables, Bulb Vegetables and Root and Tuber Vegetables):**
For suppression of root diseases caused by *Rhizoctonia* and *Fusarium*, apply 0.1 – 0.5 oz of ENV503 Biofungicide Wettable Powder per 100 lb of seed. Adjust rate accordingly to provide good coverage. Larger seed, because of reduced surface area, requires less product per 100 lb than smaller seed.

---

1 Seed treated in California must be destined for planting in states other than California and is not to be planted in California.

2 Not for use in California.

---

**STORAGE AND DISPOSAL**

Do not contaminate water, food or feed by storage or disposal.

**Pesticide Storage:** Store in a dry place out of direct sunlight, away from heat sources and under typical room temperatures. Keep from overheating or freezing.

**Product Disposal:** Wastes resulting from the use of this product must be disposed of on site or at an approved waste disposal facility.

**Container Handling:** Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn, unless allowed by state and local ordinances. If burned, stay out of smoke.

**CONDITIONS OF SALE AND WARRANTY**

The DIRECTIONS FOR USE of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and must be followed carefully. However, it is impossible to eliminate all risks inherently associated with use of this product. Crop injury, ineffectiveness, or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Envera, LLC, its Supplemental Distributors, or the Seller. To the extent consistent with applicable law, all
such risks shall be assumed by the Buyer.

Envera, LLC, its Supplemental Distributors, and the Seller warrant that this product conforms to the compositional description on the label and is reasonably fit for the purposes referred to in the Directions for Use subject to the inherent risks referred to above. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, NEITHER ENVERA, LLC, NOR ITS SUPPLEMENTAL DISTRIBUTORS, NOR THE SELLER, MAKE ANY OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR ANY PARTICULAR PURPOSE OR OF MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THIS WARRANTY DOES NOT EXTEND TO, AND THE BUYER SHALL BE SOLELY RESPONSIBLE FOR, ANY AND ALL LOSS OR DAMAGE THAT RESULTS FROM THE USE OF THIS PRODUCT IN ANY MANNER INCONSISTENT WITH THE LABEL DIRECTIONS.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE BUYER'S EXCLUSIVE REMEDY AND THE EXCLUSIVE LIABILITY OF ENVERA, LLC, ITS SUPPLEMENTAL DISTRIBUTORS, AND THE SELLER FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES, OR INJURIES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, WHETHER OR NOT BASED IN CONTRACT, NEGLIGENCE, STRICT LIABILITY IN TORT OR OTHERWISE, SHALL BE LIMITED, AT THE MANUFACTURER'S OPTION, TO REPLACEMENT OF OR THE REPAYMENT OF THE PURCHASE PRICE FOR THE QUANTITY OF PRODUCT WITH RESPECT TO THE DAMAGES THAT ARE CLAIMED. To the extent consistent with applicable law, when the Buyer suffers losses or damages resulting from the use or handling of this product (including claims based on contract, negligence, strict liability, or other legal theories), the Buyer must promptly notify Envera, LLC, its Supplemental Distributors, or the Seller in writing of any claims to be eligible to receive either remedy stated above. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, IN NO CASE SHALL ENVERA LLC, ITS SUPPLEMENTAL DISTRIBUTORS, OR THE SELLER BE LIABLE FOR CONSEQUENTIAL, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

Envera, LLC, its Supplemental Distributors, and the Seller offer this product, and the Buyer accepts it, subject to the foregoing Conditions of Sale and Warranty that may be varied only by agreement in writing signed by a duly authorized representative of Envera, LLC, its Supplemental Distributors, or the Seller. No employee or agent of Envera, LLC, its Supplemental Distributors, or the Seller is authorized to vary or exceed the terms of this Warranty in any other manner.
