Name and Address of Registrant (include ZIP Code):
AgBiTech Pty Ltd  
8 Rocla Court  
Glenvale, Queensland 4350  
Australia

Note: Changes in labeling differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Biopesticides and Pollution Prevention Division prior to use of the label in commerce. In any correspondence on this product, always refer to the above EPA Registration Number.

On the basis of information furnished by the registrant, the above named pesticide is hereby registered under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA or the Act).

Registration is in no way to be construed as an endorsement or recommendation of this product by the U.S. Environmental Protection Agency (EPA). In order to protect health and the environment, the Administrator, on his or her motion, may at any time suspend or cancel the registration of a pesticide in accordance with the Act. The acceptance of any name in connection with the registration of a product under the Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by others.

This product is unconditionally registered in accordance with FIFRA section 3(c)(5) provided that you:

1. Submit and/or cite all data required for registration or registration review of your product when the EPA requires all registrants of similar products to submit such data.

Signature of Approving Official:  
Jeannine Kausch, Product Manager 92  
Microbial Pesticides Branch  
Bioprepesticides and Pollution Prevention Division (7511P)  
Office of Pesticide Programs

Date: 3/20/2020
2. Submit storage stability and corrosion characteristics (Guidelines 830.6317 and 830.6320) data as these data requirements are not satisfied. A one-year study is required to satisfy these data requirements. You have 18 months from the date of this registration to provide these data to the EPA.

3. Make the following labeling change before you release this product for shipment:
   - Revise the EPA Registration Number to read, “EPA Reg. No. 87978-6.”

4. Submit one (1) copy of the final printed labeling for the record before you release this product for shipment.

Should you wish to add/retain a reference to your company’s website on your label, then please be aware that the website becomes labeling under FIFRA and is subject to review by the EPA. If the website is false or misleading, the product will be considered to be misbranded and sale or distribution of the product is unlawful under FIFRA section 12(a)(1)(E). 40 CFR § 156.10(a)(5) lists examples of statements the EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product’s label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the EPA find or if it is brought to our attention that a website contains statements or claims substantially differing from statements or claims made in connection with obtaining a FIFRA section 3 registration, the website will be referred to the EPA’s Office of Enforcement and Compliance Assurance.

Your release for shipment of this product constitutes acceptance of these terms. If these terms are not complied with, this registration will be subject to cancellation in accordance with FIFRA section 6. A stamped copy of the labeling is enclosed for your records. Please also note that the record for this product currently contains the following acceptable Confidential Statement of Formula (CSF):

- Basic CSF dated 12/05/2019

If you have any questions, please contact Daniel Schoeff by phone at (703) 347-0143 or via email at schoeff.daniel@epa.gov.

Sincerely,

Jeannine Kausch, Product Manager 92

Product of USA

Batch code: ___________________
**FIRST AID**

| If on skin or clothing: | Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. |

**HOTLINE NUMBER**

Have the product container or label with you when calling a poison control center or a doctor, and when going for treatment.

For general information on this product, contact the National Pesticide Information Center (NPIC) at 1-800-858-7378, Monday through Friday, 8 a.m. to 12 p.m. PST or at http://npic.orst.edu. For medical emergencies, call the poison control center at 1-800-222-1222.

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**CAUTION**

Harmful if absorbed through the skin. Avoid contact with skin and clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse.
PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Waterproof gloves
- Shoes plus socks
- Protective eyewear
- For ULV Oil applications wear chemical resistant gloves made of barrier laminate, nitrile rubber 2' 14 mils, neoprene rubber 2' 14 mils, or viton 2' 14 mils.

Mixers/loaders and applicators must wear a NIOSH-approved particulate respirator with any P or R filter with NIOSH approval number prefix TC-84A or a NIOSH-approved powered air purifying respirator with an HE filter with NIOSH approval number prefix TC-21C. Repeated exposure to high concentrations of microbial proteins can cause allergic sensitization.

Follow the manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions are available, use detergent and hot water for washables. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

Users should:
- Remove clothing/PPE immediately if pesticide gets inside.
- Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing.
- As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

For terrestrial uses: Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high-water mark.

Do not contaminate water when disposing of equipment washwater or rinsate.
DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not use this product until you have read the entire label. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirement specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide regulation.

PRODUCT INFORMATION

This product contains a biological insecticide for the control of the following larvae on labeled crops:

Corn earworm, Cotton bollworm, Tomato fruitworm (*Helicoverpa zea*)
Tobacco bollworm (*Heliothis virescens*)
Soybean looper (*Chrysodeixis includens*)
Cabbage looper (*Trichoplusia ni*)
INSTRUCTIONS

Surtivo is a combination of *Helicoverpa zea* nucleopolyhedrovirus strain ABA-NPV-U (HearNPV) and *Chrysodeixis includens* nucleopolyhedrovirus isolate #460 (ChinNPV), which are two highly specific pathogens of *Helicoverpa zea* (corn earworm), *Heliothis virescens* (tobacco bollworm), *Chrysodeixis includens* (soybean looper) and *Trichoplusia ni* (cabbage looper). The effectiveness of Surtivo is dependent on a number of important factors, such as: larval size, environmental conditions, quality of the application and the feeding behavior of the pest. Because of the requirement for good application and climatic conditions, the performance and speed of activity of Surtivo can be variable. Larvae can take up to 8 days to die, though the rate of damage by NPV-infected larvae is greatly reduced within 1 to 3 days post infection, dependent on larvae size. Daytime temperatures of 65°F to 95°F are ideal for the activity of both NPVs. Infected larvae will amplify the virus and, following death, will release large amounts of viral occlusion bodies that can result in ongoing control, particularly under warm and humid environmental conditions suitable for NPV development and dispersion.

USES

Surtivo is effective against larvae of *Helicoverpa zea*, *Heliothis virescens*, *Chrysodeixis includens* and *Trichoplusia ni*. Thorough coverage of the crop is essential, as the NPV in Surtivo must be ingested by larvae to be effective. NPV is most effective on smaller larvae (less than 0.5 inches). Target application when the majority of the larvae are 2nd instar or younger. Surtivo should not be used to control larvae that are 4th instar or larger. When used correctly, Surtivo will provide between 60 and 90% control of larvae present at the time of spraying, with greater control expected on smaller larvae. Larvae will continue to feed for up to 3 days following virus infection and take between up to 8 days to die, with slower control occurring with larger larvae and during cool conditions. Under high pest pressure or sub-optimal application conditions, or when immediate protection against damage is required, additional control options should be considered.

RAIN FASTNESS

The majority of virus uptake by larvae occurs within one (1) hour post-application. For this reason, it is best to avoid applying Surtivo if heavy rain is expected within one (1) hour following application. However, do not delay application if only moderate rain is expected, or heavy rain (greater than 0.4 inches per hour) is not imminent.
## CROPS, APPLICATION RATES AND CROP SPECIFIC INFORMATION

<table>
<thead>
<tr>
<th>Crops</th>
<th>Rate of Chrysogen per acre</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sorghum</td>
<td>0.7 to 1.4 fl. oz.</td>
<td>Use lower application rates when targeting small larvae (1st and 2nd instar) and in mixtures with chemical insecticide sprays for midge control (not ULV). Use higher application rates when targeting 3rd instar larvae or under high pressure situations. Applications that are targeted when 50% of heads have reached 100% flowering will provide good control.</td>
</tr>
<tr>
<td>Cereal Grains Group (Crop Group 15 excluding Sweet corn) including: Corn (maize), Popcorn, Rice (^1) Alfalfa (hay and seed) Oilseed Group (Crop Group 20) including: Flax seed, Canola, Safflower, Sunflower Peanut Legume Vegetables Group (Succulent or Dried) (Crop Group 6 excluding Peanut and Soybean) including: Adzuki bean, Broad bean, Chickpeas, Cowpea, Fava bean, Field pea, Kidney bean, Lablab bean, Lentil, Lima bean, Sweet lupin, White lupin, Mung bean, Navy bean, Pigeon pea, Vetch</td>
<td>1.0 to 1.6 fl. oz.</td>
<td>Use lower application rates as a preventive measure in vegetative crop stages. Use the high application rate when the pest population has reached economic threshold.</td>
</tr>
<tr>
<td>Soybean (including Edamame)</td>
<td>1.0 to 1.6 fl. oz.</td>
<td>Use lower application rates as a preventive measure in vegetative crop stages. Use the high application rate when the pest population has reached economic threshold.</td>
</tr>
<tr>
<td>Sweetcorn</td>
<td>1.2 to 2.4 fl. oz.</td>
<td>Application should be made from the vegetative stages until silking. Applications during silking should employ a high rate and be in conjunction with other control measures. Application of low rates at regular (3 to 5 day) intervals, particularly via overhead irrigation water, is an effective strategy from vegetative stages, through row tassel to silking.</td>

<td>Use a higher application rate under high pest pressure conditions or to control 3rd instar larvae. Use the lower application rate at regular intervals is an effective strategy in tobacco.</td>
</tr>
</tbody>
</table>

**MIXING GUIDLINES**

Shake the container well before use. Spray water pH should be neutral (pH 7.0) – spray water pH above 8 may damage the virus and performance will be reduced. If needed, use a suitable buffer or acidifier. If mixing with other pesticides or foliar fertilizers in water, add Surtivo to the spray tank after the other products are thoroughly diluted. Apply Surtivo within 10 hours after mixing.

**Compatibility:**

**In water:** Surtivo is highly compatible with the majority of herbicides, insecticides, fungicides and foliar fertilizers when mixed in water. Ensure that the mixture has a pH of 8 or less before adding Surtivo as higher pH levels will damage the viruses.

**In oil (ultra-low volume):** For ULV application in oil, Surtivo is not compatible with other pesticides, since the undiluted solvents in these products can damage the viruses.

---

2 Do not apply to flooded fields
APPLICATION INSTRUCTIONS

Use application parameters (nozzles, swath width, pressure, boom height, speed, etc.) to ensure thorough coverage of the target area.

I.  Legume Vegetables (Succulent and Dried) Group (Crop Group 6 excluding Soybean), Root and Tuber Vegetables Group (Crop Group 1) including: Carrot, Sweet potato, Sugar beet, Potato; Brassica (Cole) Leafy Vegetables Group (Crop Group 5) including: Broccoli, Brussels sprouts, Cabbage, Cauliflower, Chinese broccoli, Kale, Mustard greens, Mustard spinach, Rape greens; Leafy Vegetables (except Brassica Vegetables) Group (Crop Group 4) including: Celery, Endive, Lettuce, Roquette, Spinach; Fruiting Vegetable Group (Crop Group 8 - 10) including: Chili, Eggplant, Okra, Pepper, Tomato; Cucurbit Vegetables Group (Crop Group 9) including: Cucumber, Melon, Pumpkin, Summer and winter squash, Watermelon, Zucchini; Berries Group (Crop Group 13 - 07) including: Blackberry, Blueberry, Boysenberry, Cranberry³, Currant, Gooseberry, Raspberry, Strawberry; Pome Fruit Group (Crop Group 11 - 10) including: Apple, Pear; Ornamental Flowers and Plants; Avocado; Asparagus; Tobacco; Hemp.

Ground Rig

Apply Surtivo by ground rig or hand-held equipment in a minimum of 40 gallons of water per acre.

II.  Sorghum, Cereal Grains Group⁴, Alfalfa, Oilseed Group, Peanut, Soybean, Sweet Corn, Cotton

Ground Rig

Apply Surtivo in a minimum of 10 gallons of water per acre.

³ Do not apply to flooded fields
⁴ Rice – Do not apply to flooded fields
**Aerial - High Volume**

Apply Surtivo in a minimum of 3 gallons of water per acre. This application method is particularly susceptible to droplet evaporation, especially during hot and dry conditions (temperature greater than 85°F and relative humidity less than 40%). Droplet evaporation will reduce coverage, which can have a detrimental impact on performance. During hot and dry conditions avoid using this application method - wait until conditions favor good coverage or apply in ULV (see below). Alternatively, if application in water by air during hot and dry conditions cannot be avoided, increase application volume and/or use an anti-evaporation additive (such as an emulsifiable oil) to improve coverage.

**Aerial - Low Volume (Sorghum Only)**

Apply Surtivo in a minimum of 1 gallon of water per acre and include an anti-evaporation additive (such as 2% emulsifiable oil).

**Aerial - Ultra-Low Volume (ULV)**

Use an approved oil carrier and apply in a minimum volume of 1 quart per acre using micronair nozzles. When applying Surtivo in ULV, DO NOT tank mix with other pesticides or fertilizers (refer to Compatibility).
Chemigation (via overhead irrigation water):

Surtivo can be effectively applied to crops in overhead irrigation water. The product should be introduced to the irrigation water at the appropriate rate using irrigation equipment. If the product is diluted in water prior to injection into the irrigation water, ensure that the dilution water is clean and not silty with a pH of 7 or less and ensure there is constant agitation. Preferably, rainwater should be used for dilution. Ensure any diluted Surtivo is used within 10 hours of mixing.

For one-pass mobile irrigators (such as center-pivot, lateral-move, end-tow, side-roll, traveler, big-gun), continuously and evenly introduce the required quantity of Surtivo into the irrigation water over the course of irrigation. It is recommended to apply Surtivo in no more than 0.5 inches of irrigation water. For static irrigators (such as solid-set or hand-move), introduce the required amount of Surtivo into the irrigation water just prior to completion of the irrigation period, to maximize the concentration of Surtivo applied and the amount that remains on the crop. See the CHEMIGATION section (following) for additional information.

CHEMIGATION

General Requirements:

1) Apply this product only through sprinkler (including center-pivot, lateral-move, end-tow, side-(wheel) roll, traveler, big-gun, solid-set, or hand-move) irrigation systems. Do not apply this product through any other type of irrigation system including drip (trickle) systems.

2) Lack of effectiveness can result from non-uniform distribution of treated water.

3) If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers, or other experts.

4) Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

5) A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make any necessary adjustments should the need arise.

Requirements for Chemigation Systems Connected to Public Water Systems:

1) Public water supply means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of 25 individuals daily at least 60 days throughout the year.

2) Chemigation systems connected to the public water systems must contain a functional, reduced-pressure zone (RPZ), backflow preventer or the functional equivalent in the water supply upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the flow outlet end of the fill pipe and the top or the overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

3) The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
4) The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

5) The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

6) Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7) Do not apply when wind speed favors drift beyond the area intended for treatment.

Requirements for Sprinkler Chemigation:
1) The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow.

2) The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

3) The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

4) The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

5) The irrigation line or water pump must include a functional pressure switch, which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

6) Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7) Do not apply when wind speed favors drift beyond the area intended for treatment.

DAYS TO HARVEST
There are no restrictions on applying Surtivo up to the time of harvest.
STORAGE and DISPOSAL
Do not contaminate water, food, or feed by storage and disposal.

PESTICIDE STORAGE
Care must be taken to avoid exposure of Surtivo to high temperatures (above 104°F). Packaged, sealed product can be exposed to direct light for brief periods of time (<2 hours), but should be stored out of direct sunlight.

- Surtivo stored in cool rooms, refrigerators and freezers* (0 to 59°F) will be viable for at least 30 months.
- Surtivo stored in air-conditioned rooms (<77°F) will be viable for at least 6 months.

*Surtivo stored in a freezer (0°F) will remain liquid.

**Note:** Exposure of Surtivo to temperatures from 77°F to 104°F for short periods of time (<36 hours) will not affect efficacy. Transport time of 36 hours or less in non-refrigerated, covered trucks is acceptable as long as temperature does not exceed 104°F.

PESTICIDE DISPOSAL
To avoid waste, apply product in this container according to label directions. If waste cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local governments or by industry).

CONTAINER HANDLING
[Plastic containers with capacities equal to or less than 5 gallons:] Nonrefillable container. Do not reuse or refill this container. Triple rinse container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of the container in a sanitary landfill, or by incineration. Do not burn, unless allowed by state and local ordinance. If burned, stay out of smoke.
WARRANTY

This product is warranted to contain the amount of active ingredients as described in this label and the product will be as effective as intended if properly transported, used, and applied per the label instructions. The effectiveness of this product may be degraded by improper storage, transportation or handling and may be subject to environmental factors out of AgBiTech Pty Ltd.'s control. The user must monitor the performance of the product as climatic, geographical or biological variables may affect the results obtained. To the extent consistent with applicable law, AgBiTech Pty Ltd. and its subsidiaries make no other warranties, expressed or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond the statements made on this label or accepts no responsibility in respect of this product. To the extent consistent with applicable law, AgBiTech Pty Ltd. and its subsidiaries disclaim any liability whatsoever for special, incidental or consequential damages resulting from the use or handling of this product.
