EPA Reg. No. 91266-1
Decision No. 497398

Should you wish to add/retain a reference to the company's website on your label, then please be aware that the website becomes labeling under the Federal Insecticide Fungicide and Rodenticide Act and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) list examples of statements EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product's label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA's Office of Enforcement and Compliance.

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6. Your release for shipment of the product constitutes acceptance of these conditions. A stamped copy of the label is enclosed for your records. Please also note that the record for this product currently contains the following Confidential Statement of Formula (CSF):

- Basic CSF dated 01/14/2015

If you have any questions, please contact Jacquelyn Marchese at (703) 347-0559 or marchese.jacquelyn@epa.gov.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND
DOMESTIC ANIMALS
ANEE
Acute Hazards: May be fatal if swallowed. Harmful
if inhaled. Corrosive. Causes irreversible eye damage.
Hazard avoidance: Do not breathe dust or fumes. Do not get in eyes, on skin, or on clothing. Wear protective clothing, eyewear, and respiratory

 gum, using tobacco or using the toilet. Remove and
wash contaminated clothing before reuse.
PERSONAL PROTECTIVE EQUIPMENT:
Handlers and Applicators who apply product by

Long-sleeved shirt and long pants
Socks and shoes
Protective eyewear such as goggles
particulate filter
 the Vaporizer Method must wear:
Socks and shoes
Protective gloves
Protective eyewear (goggles or face shield) particulate filter
User Safety Requirements:

 laundry.
Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
Remove clothing/PPE immediately if pesticide gets
inside. Then wash thoroughly and put on clean
clothing
Remove PPE immediately after handling this product. As soon as possible, wash thoroughly and change into clean clothing.
STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage
or disposal.
PESTICIDE STORAGE: Store only in original
container, in a dry place inaccessible to children,
pets, and domestic animals.
PESTICIDE DISPOSAL: Wastes resulting from the
use of this product may be disposed of on site or at
an approved waste disposal facility.
CONTAINER HANDLING: Nonrefillable container.
Do not reuse or refill this container.
PLASTIC CONTAINER DISPOSAL: Triple rinse
container (or equivalent) promptly after use. Offer for
recycling, if available. Otherwise, puncture and
dispose of in a sanitary landfill, or, if allowed by state
and local authorities, by burning. If burned, stay out
of smoke.
APPLICATION DIRECTIONS:
DIRECTIONS FOR USE, continued
Oxalic acid is used to treat colonies during low brood periods, packages, or swarms. This product can also be used as a
 problematic.

## SOLUTION METHOD:

## VAPORIZER METHOD:

Apply only to outdoor colonies with a restricted lower hive entrance. Seal all upper hive entrances and cracks with tape to
 Dihydrate powder into vaporizer. Follow the vaporizer manufacturer's directions for use. Insert the vaporizer apparatus through the bottom entrance. Apply heat until all Oxalic Acid has sublimated.

## SPRAYING PACKAGE BEES

Ensure bees are clustered before applying oxalic acid (for example store in cool dark location 24 hours before application).
Spray broodless package bees with a $1: 1$ sugar:water solution at least 2 hours before spraying with oxalic acid. This allows bees to fill honey stomachs with sugar water reducing ingestion of oxalic acid.
Mix a $2.8 \%$ oxalic acid solution by dissolving 35 g of Oxalic Acid Dihydrate in 1 liter of $1: 1$ sugar: water (weight:volume). Evenly apply 3.0 mL of $2.8 \%$ oxalic acid solution per 1,000 bees using a pump sprayer or battery powered sprayer (for
example, a typical 2 lb package contains approximately 7,000 bees which requires 21 mL of solution). Apply solution evenly on both sides of the package.
Store bees in a cool darkened room for 72 hours before hiving.
RESISTANCE MANAGEMENT: Oxalic acid's mechanism of action is unknown at this time. Any Varroa mite
 of application and rate/dose of application. Continued reliance on a single class of miticide or single miticide with the same mode of action will select for resistant individuals which may dominate the mite population in subsequent generations. In order to prevent resistance development and to maintain the usefulness of individual insecticides it is important to adopt appropriate resistant management strategies.
To delay resistance:
When possible, rotate the use of miticides to reduce selection pressure as compared to repeatedly using the
same product, mode or action or chemical class. If multiple applications are required, use a different mode of action each time before returning to a previously-used one.
Base miticide use on Integrated Pest Management (IPM). This includes proper pest identification, monitoring for locality specific economic threshold and economic injury levels, record keeping, and utilizing all available control practices (cultural, biological and chemical).
