

U.S. ENVIRONMENTAL PROTECTION AGENCY

Office of Pesticide Programs
Registration Division (7505T)
1200 Pennsylvania Ave., N.W.
Washington, D.C. 20460

EPA Reg. Number:

95172-8

Date of Issuance:

3/26/25

NOTICE OF PESTICIDE:

☒ Registration
☐ Reregistration
(under FIFRA, as amended)

Term of Issuance:

Unconditional

Name of Pesticide Product:

Propanil 5 VRC

Name and Address of Registrant (include ZIP Code):

PRORICE LLC
5100 Poplar Ave, Suite 325
Memphis TN, 38138

Note: Changes in labeling differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Registration Division prior to use of the label in commerce. In any correspondence on this product always refer to the above EPA registration number.

On the basis of information furnished by the registrant, the above named pesticide is hereby registered under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA).

Registration is in no way to be construed as an endorsement or recommendation of this product by the Agency. In order to protect health and the environment, the Administrator, on his motion, may at any time suspend or cancel the registration of a pesticide in accordance with the Act. The acceptance of any name in connection with the registration of a product under this Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by others.

This product is unconditionally registered in accordance with FIFRA section 3(c)(5) provided that you:

1. Submit and/or cite all data required for registration/reregistration/registration review of your product when the Agency requires all registrants of similar products to submit such data.

Continues page 2

Signature of Approving Official:

Emily Schmid

Emily Schmid, Product Manager 25
Herbicide Branch, Registration Division (7505P)

Date:

3/26/25

2. Make the following label changes before you release the product for shipment:
 - Revise the EPA Registration Number to read, "EPA Reg. No. 95172-8."
3. Submit one copy of the final printed label for the record before you release the product for shipment.

Should you wish to add/retain a reference to the company's website on your label, then please be aware that the website becomes labeling under FIFRA and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) lists examples of statements EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product's label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA's Office of Enforcement and Compliance.

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6. Your release for shipment of the product constitutes acceptance of these conditions. A stamped copy of the label is enclosed for your records.

The record for this product currently contains the following CSF(s):

- Basic CSF dated 5/30/2024

If you have any questions, please contact Lydia Crawford at 202-566-2575 or at crawford.lydia@epa.gov.

PROPANIL

GROUP

7

HERBICIDE

Propanil 5 VRC

[ABN: ProFive, ProCast]

Herbicide

For Postemergence Control of Grass and Broadleaf Weeds in Rice Fields

ACTIVE INGREDIENT:

Propanil: 3',4'-Dichloropropionanilide50.1%

OTHER INGREDIENTS:49.9%

TOTAL100.0%

This product contains 5 lbs. of propanil per gallon of formulated product.

KEEP OUT OF REACH OF CHILDREN

CAUTION/PRECAUCION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand this label, find someone to explain it to you in detail.)

[See inside label booklet for First Aid, Precautionary Statements and Directions for Use.]

FIRST AID	
IF SWALLOWED:	• Call a poison control center or doctor immediately for treatment advice. • Have person sip a glass of water if able to swallow. • Do not induce vomiting unless told to by a poison control center or doctor. • Do not give anything by mouth to an unconscious person.
IF ON SKIN OR CLOTHING:	• Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15 to 20 minutes. • Call a poison control center or doctor for treatment advice.
IF IN EYES:	• Hold eye open and rinse slowly and gently with water for 15-20 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. • Call a poison control center or doctor for treatment advice.
IF INHALED:	• Move person to fresh air. • If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible. • Call a poison control center or doctor for further treatment advice.
Have the product container or label with you when calling a poison control center or doctor or going for treatment. For 24-hour medical emergency assistance (human or animal) call 1-800-222-1222. For chemical emergency assistance (spill, leak, fire, or accident) call ChemTrec at 1-800-424-9300.

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION. Harmful if swallowed or absorbed through the skin. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals. Wear protective eyewear and chemical resistant gloves made of barrier laminate or either barrier laminate, butyl rubber > 14 mils, nitrile rubber > 14 mils, neoprene rubber, > 14 mils polyvinyl chloride > 14 mils or viton > 14 mils. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

{This section is for formulations NOT packaged with built-in probes}

Mixers, loaders, ground applicators, and other handlers cleaning up spills or equipment or otherwise exposed to the concentrate and handlers removing an unrinsed probe must wear the following:

- Coveralls over long-sleeved shirt and long pants
- Chemical resistant gloves made of either barrier laminate, butyl rubber > 14 mils, nitrile rubber > 14 mils, neoprene rubber, > 14 mils polyvinyl chloride > 14 mils or viton > 14 mils
- Chemical-resistant footwear plus socks
- Chemical resistant apron, when mixing and loading
- Protective eyewear if the system operates under pressure

Pilots and handlers removing a triple-rinsed probe must wear:

- Long-sleeved shirt and long pants
- Shoes plus socks.

See **Engineering Controls** for additional requirements and options.

{This section is for formulations packaged WITH built-in probes}

Mixers, loaders, applicators and other handlers must wear the following:

- Long-sleeved shirt
- Long pants
- Shoes plus socks
- Protective eyewear such as chemical goggles or face shield
- Chemical resistant gloves made of either barrier laminate, butyl rubber > 14 mils, nitrile rubber > 14 mils, neoprene rubber, > 14 mils polyvinyl chloride > 14 mils or viton > 14 mils
- Chemical-resistant apron when mixing/loading, cleaning up spills or equipment, or otherwise exposed to the concentrate.

See **Engineering Controls** for additional requirements.

USER SAFETY RECOMMENDATIONS

Users should:

- Wash hands thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

[Note to reviewer: [Text] in brackets denotes optional text].

[Note to reviewer: {Text} in braces denotes where in the final label text will appear.]

USER SAFETY REQUIREMENTS

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing or other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them.

{The following Engineering Controls will be used if product packaged with built in probe}

ENGINEERING CONTROLS

Mixers and loaders must use a closed system that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4)] for dermal protection and must:

- Wear the personal protective equipment required in the PPE section of this label for mixers and loaders,
- Wear protective eyewear, if the system operates under pressure, and
- Chemical-resistant footwear and coveralls must be provided and be immediately available for use in an emergency, such as a broken package, spill, or equipment breakdown.

{The following Engineering Controls will be used if product packaged without built in probe.}

ENGINEERING CONTROLS

Mixers and loaders must either:

- (1) Use a closed system that meets the requirements listed in the Worker Protection Standard (WPS) for dermal protection of agricultural pesticides [40 CFR 170.240 (d)(4)].

OR

- (2) Use the probe system described below:

PROBE SYSTEM

Specific requirements for use of the probe closed mixing/loading system:

- Remove plug from bung of drum containing this product only when drum is sitting on the ground or on a secure level platform, with the bung end of the drum pointed up.
- Do not pour this product from its drum.
- Transfer product from the drum to the mixing tank by use of suction hose connected at one end to the suction pump on the mixing tank and connected at the other end to a probe (dip tube) that is inserted through the bung opening into the drum.
- Do not handle the probe or bung in a manner that allows dripping or splattering of the product onto yourself or any other person.
- Do not touch the portion of the probe that has been in contact with this product until after the probe has been triple rinsed with water.
- If all the product is removed from the drum, then triple rinse the probe while it remains inside the drum.

UNRINSED PROBES

- If an un-rinsed probe must be removed from the drum, then use an anti-drip flange, and immediately transfer the probe into a container of rinse water. The anti-drip flange must be designed to remove excess propanil product from the probe as it is extracted from the drum.
- Take the following steps if the probe must be disconnected from the suction hose before both the probe and the hose have been triple rinsed:
 - (1) Equip the probe end of the hose with a shut off valve
 - (2) Install a dry break coupling between the valve and the probe
 - (3) Close the shut-off valve before disconnecting the probe.

[Note to reviewer: [Text] in brackets denotes optional text].

[Note to reviewer: {Text} in braces denotes where in the final label text will appear.]

PPE FOR ALL TRANSFER SYSTEMS

In addition, mixers and loaders using all systems must:

- wear the personal protective equipment required in the PPE section of this labeling for mixers and loaders,
- wear protective eyewear, if the system operates under pressure, and
- when using a system that meets the requirements in the WPS as a closed system or using a probe system when the probe is not removed, chemical-resistant footwear must be provided, be immediately available, and be used in an emergency, such as a broken package, spill, or equipment breakdown.

All systems must be capable of removing the pesticide from the shipping container and transferring it into mixing tanks and/or application equipment. At any disconnect point, the system must be equipped with a dry disconnect or dry couple shut-off device that is warranted by the manufacturer to minimize drippage.

Flaggers: Human flagging is prohibited. Flagging to support aerial application is limited to use of the Global Positioning System (GPS) or mechanical flaggers.

Enclosed Cabs for Aerial Applicators: Pilots must use an enclosed cockpit that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(6)].

ENVIRONMENTAL HAZARDS

This pesticide is toxic to birds. This product is toxic to fish and aquatic invertebrates. For terrestrial uses, do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high-water mark. Do not contaminate water when disposing of equipment washwaters or rinsate. Drift and runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water intended for irrigation or domestic purposes. Do not apply when weather conditions favor drift from areas to be treated.

Ground Water Advisory

This chemical has properties and characteristics associated with chemicals detected in ground water. The use of this chemical prior to flooding may result in shallow ground water contamination due to cracks in subsoil of the rice paddy.

Propanil and 3, 4-DCA (a major propanil degradate) are known to leach through soil into groundwater under certain conditions as a result of label use. This chemical may leach into groundwater if used in areas where soils are permeable, particularly where the water table is shallow

Surface Water Advisory

This product may contaminate water through runoff following rainfall events and by seepage through the levees. This product has a high potential for runoff. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours. Levees should be constructed with adequate time prior to chemical application so that they are compacted to reduce seepage and to hold 3- 6-inch flood.

NON-TARGET ORGANISM ADVISORY: This product is toxic to plants and may adversely impact the forage and habitat of non-target organisms, including pollinators, in areas adjacent to the treated site. Protect the forage and habitat of non-target organisms by the following label directions intended to minimize spray drift

PHYSICAL OR CHEMICAL HAZARDS

Do not store with, near, mix or allow to come into contact with oxidizing agents. Hazardous chemical reactions may occur.

[Note to reviewer: [Text] in brackets denotes optional text].

[Note to reviewer: {Text} in braces denotes where in the final label text will appear.]

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard (WPS), 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval (REI). The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours. Do not enter or allow others to enter the treated area (except those persons involved in the incorporation) until the incorporation is complete following application.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated including plants, soil, or water, is:

- Coveralls.
- Chemical resistant gloves made of barrier laminate, butyl rubber > 14 mils, nitrile rubber > 14 mils, neoprene rubber, > 14 mils polyvinyl chloride > 14 mils or viton > 14 mils
- Chemical Resistant footwear plus socks
- Protective eyewear

RESTRICTIONS

- DO NOT apply this product through any type of irrigation system.
- DO NOT plant or transplant crops in the treated area for at least 60 days following an application of this product.
- DO NOT apply more than 1.2 gallons of Propanil 5 VRC (6 lb active ingredient) per acre in a single application or exceed 1.6 gallons of Propanil 5 VRC (8 lb active ingredient) per acre per year. For reduced broadcast rates, see **BROADCAST RATE** section.
- DO NOT apply to fields where commercial catfish farming is practiced or drain water from treated fields into areas where catfish farming is practiced.
- DO NOT fish or commercially grow fish, shellfish or crustaceans on treated areas during the 12 months following treatment.
- DO NOT apply when temperature exceeds 90°F.
- Do not apply within 60 days of harvest.
- DO NOT apply this product (directly or indirectly) to any crop other than rice.
- DO NOT apply this product within 14 days before or after application of carbamates or organophosphate products. Serious injury to rice may occur.
- DO NOT apply when wind conditions will allow drift to adjacent, susceptible crops including beans, soybeans, cotton, safflower, cucurbits, vegetables, orchards (including almonds, prunes and grapes) and other sensitive crops.
- Water drained from treated rice fields must not be used to irrigate other crops or be released within ½ mile of a potable water intake in flowing water (i.e., river, stream, etc.) or within ½ mile of a potable water intake in a standing body of water such as a lake, pond, or reservoir.

MANDATORY SPRAY DRIFT MANAGEMENT

Avoiding spray drift at the application site is the responsibility of the applicator and the grower. The interaction of many equipment and weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering these factors when making application decisions.

Aerial Applications:

- Do not release spray at height greater than 10 ft above the ground or vegetative canopy, unless a greater application height is necessary for pilot safety.
- Applicators are required to select the nozzle and pressure that deliver medium or coarser droplets as indicated in manufacturers' catalogues and in accordance with American Society of Agriculture & Biological Engineers Standard S641 (ASABE 641).
- Do not apply when wind speeds exceed 15 mph at the application site. If the windspeed is greater than 10 mph, the boom length must be 65% or less of the wingspan for fixed wing aircraft and 75% or less of the rotor diameter for helicopters. Otherwise, the boom length must be 75% or less of the wingspan for fixed-wing aircraft and 90% or less of the rotor diameter for helicopters.
- If the windspeed is 10 miles per hour or less applicators must use ½ swath displacement upwind at the swath displacement upwind at the downwind edge of the field. When the windspeed is between 11-15 miles per hour, applicators must use ¾ swath displacement upwind at the downwind edge of the field.
- Do not apply during temperature inversions.

Ground Boom Applications:

- User must only apply with the release height recommended by the manufacturer, but no more than 4 feet above the ground or crop canopy.
- Applicators are required to select the nozzle and pressure that deliver medium or coarser droplets as indicated in manufacturers' catalogues and in accordance with American Society of Agriculture & Biological Engineers Standard 572 (ASABE S572).
- Do not apply when wind speeds exceed 15 miles per hour at the application site.
- Do not apply during temperature inversions.

SPRAY DRIFT ADVISORIES

THE APPLICATOR IS RESPONSIBLE FOR AVOIDING OFF-SITE SPRAY DRIFT.
BE AWARE OF NEARBY NON-TARGET SITES AND ENVIRONMENTAL CONDITIONS.

IMPORTANCE OF DROPLET SIZE

An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.

Controlling Droplet Size - Ground Boom

- Volume - Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher flow rate.
- Pressure - Use the lowest spray pressure recommended for the nozzle to produce the target spray volume and droplet size.
- Spray Nozzle - Use a spray nozzle that is designed for the intended application. Consider using nozzles designed to reduce drift.

Controlling Droplet Size - Aircraft

- Adjust Nozzles - Follow nozzle manufacturers' recommendations for setting up nozzles. Generally, to reduce fine droplets, nozzles should be oriented parallel with the airflow in flight.

BOOM HEIGHT - Ground Boom

For ground equipment, the boom should remain level with the crop and have minimal bounce.

[Note to reviewer: [Text] in brackets denotes optional text].

[Note to reviewer: {Text} in braces denotes where in the final label text will appear.]

RELEASE HEIGHT - Aircraft

Higher release heights increase the potential for spray drift.

SHIELDED SPRAYERS

Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.

TEMPERATURE AND HUMIDITY

When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.

TEMPERATURE INVERSIONS

Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions.

WIND

Drift potential generally increases with wind speed. AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS. Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

RESISTANCE-MANAGEMENT RECOMMENDATIONS

For resistance management, Propanil 5 VRC is a Group 7 herbicide. Any weed population may contain or develop plants naturally resistant to Propanil 5 VRC and other Group 7 herbicides. The resistant biotypes may dominate the weed population if these herbicides are used repeatedly in the same field. Appropriate resistance-management strategies should be followed.

To delay herbicide resistance take one or more of the following steps:

- Rotate the use of Propanil 5 VRC or other Group 7 herbicides within a growing season sequence or among growing seasons with different herbicide groups that control the same weeds in a field.
- Use a tank mixture from a different group if such use is permitted; where information on resistance in target weeds species is available, use the less resistance-prone partner at a rate that will control the target weed(s) equally as well as the more resistance-prone partner. Consult your local extension service or certified crop advisor if you are unsure as to which active ingredient is currently less prone to resistance.
- Adopt an integrated weed-management program for herbicide use that includes scouting and uses historical information related to herbicide use and crop rotation, and that considers tillage (or other mechanical control methods), cultural (e.g., optimal water management, higher crop seeding rates; precision fertilizer application method and timing to favor the crop and not the weeds), biological (weed competitive crops or varieties) and other management practices.
- Scout after herbicide application to monitor weed populations for early signs of resistance development. Indicators of possible herbicide resistance include: (1) failure to control a weed species normally controlled by the herbicide at the dose applied, especially if control is achieved on adjacent weeds; (2) a spreading patch of non-controlled plants of a particular weed species; (3) surviving plants mixed with controlled individuals of the same species. If resistance is suspected, prevent weed seed production in the affected area by an alternative herbicide from a different group or by a mechanical method such as hoeing or tillage. Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment when moving between fields, and planting clean seed.
- If a weed pest population continues to progress after treatment with this product, discontinue use of this product, and switch to another management strategy, crop or herbicide with a different mode of action, if available.
- Contact your local extension specialist or certified crop advisors for additional pesticide resistance- management and/or integrated weed-management recommendations for specific crops and weed biotypes.
- For further information or to report suspected resistance, contact PRORICE LLC at {insert toll-free number} or at {insert internet site}.

[Note to reviewer: [Text] in brackets denotes optional text].

[Note to reviewer: {Text} in braces denotes where in the final label text will appear.]

WHERE TO USE

Propanil 5 VRC is used for postemergence control of broadleaf and grass weeds in rice fields.

WEEDS CONTROLLED

Barnyardgrass (watergrass)	<i>Echinochloa crus-galli</i>
Brachiaria	<i>Brachiaria platyphylla</i>
Coffeeweed	<i>Sesbania herbacea</i>
Crabgrass	<i>Digitaria</i> spp.
Croton	<i>Croton</i> spp.
Curly indigo	<i>Aeschynomene virginica</i>
Eclipta	<i>Eclipta prostrata</i>
Foxtail	<i>Setaria</i> spp.
Goosegrass	<i>Eleusine indica</i>
Ground cherry	<i>Physalis</i> spp.
Gulf cockspur	<i>Echinochloa crus-pavonis</i>
Mexicanweed	<i>Caperonia castanifolia</i>
Millet (Texas)	<i>Urochloa texana</i>
Morning-glory	<i>Ipomoea</i> spp.
Paragrass	<i>Urochloa mutica</i>
Pigweed	<i>Amaranthus</i> spp.
Redstem	<i>Ammannia coccinea</i>
Rice field bulrush	<i>Scirpus mucronatus</i>
Smallflower umbrella plant	<i>Cyperus diffornis</i>
Smartweed	<i>Polygonum</i> spp.
Sicklepod	<i>Cassia obtusifolius</i>
Sourdock	<i>Rumex crispus</i>
Spearhead	<i>Phacelia hastate</i>
Wiregrass	<i>Eleusine indica</i>

(Propanil 5 VRC will not control arrowhead, Bermudagrass, cattail, ducksalad, Johnsongrass, nutgrass, red rice and sprangletop).

PRODUCT INFORMATION

Several important factors should be considered to achieve a high efficiency of selective weed control with Propanil 5 VRC. These include uniform application, growth stage and weather conditions. To assure uniform application, mix the prescribed amount of Propanil 5 VRC with a sufficient volume of water to provide thorough coverage of target area.

For aerial applications use approximately 10 gallons of water or for surface (ground) applications 20-30 gallons of water per acre at sufficient spray pressure. Agitate tank mixes thoroughly and continuously. Avoid over and under application.

Growth stage of weeds is very important. Best results for selective weed control are obtained when most grasses have reached to 1 to 3 leaf stage.

Proper field preparation is essential to ascertain a relatively clod free and level surface and to obtain uniform flood levels and growth. Fields may be flushed prior to treatment to produce uniform and vigorous grass germination and growth. Drain water from fields prior to applying Propanil 5 VRC. Higher rates are recommended to control larger grasses or exposed weeds when rice fields are not completely drained. Inspect rice fields regularly to select the correct application time.

[Note to reviewer: [Text] in brackets denotes optional text].

[Note to reviewer: {Text} in braces denotes where in the final label text will appear.]

WEATHER CONDITIONS

Temperature: Temperatures at and before application affect product activity in controlling target weeds. Applications should be made when daily maximum temperatures are between 75°F and 100°F. Control decreases with temperatures below 75°F and increases with temperatures above 75°F.

Application Timing: Propanil 5 VRC normally requires 8 hours of DIRECT sunlight after application for absorption into target weeds; however, many atmospheric and environmental conditions can affect absorption into the target weeds. It is highly recommended that application of Propanil 5 VRC be planned so that the applied product remains in contact with the leaf surfaces for at least 48 hours prior to rainfall or flooding. Historically, morning applications of Propanil products, including Propanil 5 VRC have produced better results in weed control.

Relative Humidity: Propanil 5 VRC is a contact herbicide; therefore, herbicidal activity is affected by humidity. High humidity and dew aid in weed control by allowing the product to remain in solution longer on the leaf surface. Low humidity decreases plant activity and thus reduces product absorption. During periods of low humidity, higher spray volumes, 9.6-12 gallons of water per acre should be used when applied aerially.

Soil Moisture: Under dry conditions grass and broadleaf weeds are less susceptible to control. Higher rates of product, 3.2 to 4.8 quarts (4 to 6 lb active ingredient) per acre should be used to achieve control.

Wind: Application should be avoided if wind velocity is high enough to cause drift of the application spray off the target site or irregular spray patterns.

EMERGENCY RELEASE PROVISION

Water holding (discharge) intervals for flood water following propanil application in all states:

For delayed flood (water-seeded) rice grown south of Interstate Highway 10 from the Texas/Louisiana border to Houston and east of State Highway 35 from Houston to Port Lavaca - Flood water must be held for 10 days after application, unless excessive rainfall completely submerges the rice crop and forces premature release. For Texas rice grown in areas north or west of these boundaries, the water holding interval will be 7 days.

For delayed flood (water-seeded) rice in Southern Louisiana south of Highway 14 - Flood water must be held for 15 days after propanil application unless excessive rainfall completely submerges the rice crop and forces premature release. Delayed flood (water-seeded) rice in Louisiana, north of Highway 14 boundary, is subject to the 7-day water holding interval provisions.

For rice grown in California and all other parts of the U.S. not mentioned above - Flood water must be held for 7 days after application, unless excessive rainfall completely submerges the rice crop and forces premature release.

ADJUVANTS AND APPLICATION AIDS:

When Propanil 5 VRC is used alone (not in combination with any other post emergent rice herbicide) a surfactant may be used to improve wetting of foliage and increase weed control. Use of a surfactant is recommended when application is made during cool weather conditions or unstable weather conditions that may produce rain. Consult product labels for adjuvant recommendations and Extension Service for detailed application advice.

[Note to reviewer: [Text] in brackets denotes optional text].

[Note to reviewer: {Text} in braces denotes where in the final label text will appear.]

BROADCAST RATE

Apply up to 0.6 gallons (3 lbs. active ingredient) of Propanil 5 VRC per acre when most grasses have reached the 1- to 3-leaf stage. Use up to 0.8 gallons of Propanil 5 VRC (4 lbs. active ingredient) per acre when the grasses are large (4- to 6-leaf stage) or when unseasonably cool weather conditions prevail, grass and broadleaf weeds are stressed due to dry conditions or in cases where the rice fields have not been drained completely and where weeds are large enough.

Barnyardgrass may be controlled up to 30 to 45 days after planting, before rice plants have reached the fully tillered growth stage.

RESTRICTIONS:

For 1- to 3- leaf stage:

- DO NOT apply more than 0.6 gallons/A (3 lbs. a.i./A) per application.
- DO NOT make more than 2 applications per year.
- DO NOT apply more than 1.2 gallons/A (6 lbs. a.i./A) during the 1- to 3-leaf stage per year.
- For repeat applications, make on a minimum of a 1-day interval.
- DO NOT apply within 60 days of harvest.

For 4- to 6-leaf stage:

- DO NOT apply more than 0.8 gallons/A (4 lbs. a.i./A) per application.
- DO NOT make more than 2 applications per year.
- DO NOT apply more than 1.6 gallons/A (8 lbs. a.i./A) per year.
- For repeat applications, make on a minimum of a 1-day interval.
- DO NOT apply within 60 days of harvest.

NOTE: Propanil 5 VRC applied to rice after the 4-leaf stage may cause visible injury under some climactic conditions. Rice plants usually outgrow such injury.

IN CALIFORNIA: Use Propanil 5 VRC only where rice fields are completely drained, or a minimal amount of water remains. If higher water level is desired, reflood field after 12 hours and before 7 days after treatment. This will discourage new weed infestations. Do not apply Propanil 5 VRC within 14 days before or after insecticide applications. Serious injury to rice may occur.

SPRAY MIXTURE PREPARATION

Wet Spray Application

Mix **Propanil 5 VRC** with clean water in the spray tank. Use only approved drift control agents with **Propanil 5 VRC**.

Agitate the mixture prior to application and maintain agitation to provide for uniform mixing and application. If the mixture is not sprayed immediately following initial tank preparation, mix thoroughly prior to applying. Always make application within 24 hours of product mixing to avoid product degradation.

Restrictions:

- Do not use water from paddies or water that is otherwise contaminated or dirty.
- Do not use any other additives unless directed by this label.
- Do not store in nurse tanks or any other tanks used to store or transport clean water. Install one-way valves (anti-siphoning devices) on lines and hoses of mixing/loading equipment to prevent contamination of nurse tanks or other clean water sources.
- Do not use mixing and application equipment exposed to **Propanil 5 VRC** for anything other than rice applications until it has been cleaned according to the **SPRAY EQUIPMENT CLEAN-OUT** section of this label.

Additional Mixing Instructions

1. Fill the spray tank $\frac{1}{4}$ to $\frac{1}{3}$ with clean water as the carrier.
2. Begin agitation and add the specified amount of **Propanil 5 VRC**.
3. Maintain agitation until the product is fully dispersed for at least 5 minutes.
4. Then, while maintaining agitation fill the tank with water. The product should be thoroughly mixed with water prior to adding any other material.
5. While the tank is filling, add any tank mix partner (other labeled rice herbicides, adjuvants, drift control agents, etc.).
6. Settling may occur if the constant agitation is not maintained. If setting does occur, thoroughly mix before using.
7. Make application within 24 hours of product mixing, or the product may degrade.
8. Pre-slurry the product in clean water before adding to the tank if product and a tank mix partner will be applied in multiple loads. This will prevent the tank mix partner from affecting the dissolution of the **Propanil 5 VRC**.

SPRAY EQUIPMENT CLEAN-OUT

As soon as possible, thoroughly clean spray equipment using the procedure below after application of Propanil 5 VRC and before using spray equipment for any other applications:

1. Use a non-chlorine-based detergent and steam-clean the tank. Be sure to remove all physical residues.
2. Thoroughly rinse the application equipment with clean water: including sprayer, tanks, boom, and hoses.
3. Fill the tank half full of clean water and add a tank cleaning solution as directed. Fill the tank to capacity with clean water. Flush the nozzles, boom, and hoses, and agitate for at least 15 minutes (if possible, recirculate). Then, drain the equipment, and flush the boom and hoses thoroughly.
4. Rinse tanks, hoses, and nozzles with clean water to remove any tank cleaning solution residue.
5. Next, fill the tank half full of clean water and add 1 gal. of 21% ammonia or 7 gals. of 3% ammonia per 100 gals. of water. Fill the tank to capacity with clean water and flush the nozzles, boom, and hoses while agitating for at least 15 minutes (if possible, recirculate). Then, drain the equipment, and flush the boom and hoses thoroughly.
6. Remove and clean nozzles, screens, and strainers, separately.
7. Rinse the spray tank, booms, and hoses with clean water.
8. Repeat steps 5 and 7, 3 more times.
9. Rinse the spray tank, booms, and hoses to remove any ammonia residue.
10. The rinse water may be applied to rice fields. Dispose of bleach rinses at an approved waste disposal facility.

NOTE: When making application of this product in multiple loads for several days in a row, the following procedure must be performed at the end of each day: Fill the tank partially with fresh water, flush the boom and hoses, and allow to sit overnight.

Restriction: DO NOT MIX chlorine bleach with ammonia. All liquid fertilizer containing ammonia, ammonium nitrate or ammonium sulphate residues must be rinsed from the mixing and application equipment with water prior to adding chlorine bleach solution. Mixing chlorine bleach with ammonia will release a gas with a musty chlorine odor that can cause eye, nose, and throat and lung irritation. Do not clean equipment in an enclosed area.

Clean-up procedures on batch tanks and any other mixing equipment should be done separately from aircraft application equipment. Care should be given to clean all loading hoses and any other equipment or surfaces exposed to this product.

TANK MIXTURES

It is the pesticide user's responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Propanil 5 VRC can be tank mixed with any herbicide(s) registered for use on rice to increase the weed control spectrum.

When tank mixing, observe all restrictions and limitations specified on the label of each product; always follow the most restrictive labeling.

STORAGE AND DISPOSAL

Do not contaminate water, food, or seed by storage and disposal.

PESTICIDE STORAGE: Open dumping is prohibited. Do not store this product near fertilizers, seeds, insecticides, or fungicides. Store at temperatures above 32°F. If product is allowed to freeze, warm to 50°F and agitate before using. Containers should not be stacked more than three (3) containers high. Reclose all partially used containers by thoroughly tightening screw cap. Damaged or leaking containers that contain product that cannot be used immediately should be transferred to suitable sound containers and properly marked. Any spilled materials should be thoroughly absorbed with a suitable absorbent, swept up and transferred to a new or waste container for disposal as indicated under "Pesticide Disposal". For safety and prevention of unauthorized use, all pesticides should be stored in locked facilities. To prevent accidental misuse, different pesticides should be stored in separate areas with enough distance between to provide clear identification. Opened, partially used pesticides should be stored in original containers when possible. When transfer to another container is necessary because of leakage or damage, carefully mark and identify contents of the new container. Keep containers closed when not in use.

PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your state pesticides or environmental control agency, or the hazardous waste representative at the nearest EPA region office for guidance.

CONTAINER HANDLING:

Non-refillable container (Equal to or Less than 5 Gallons): Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container $\frac{1}{4}$ full with water and recap. Shake container for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer container for recycling, if available, or puncture and dispose of container in a sanitary landfill, or by other procedures allowed by state and local authorities.

Non-refillable container (Greater than 5 Gallons): Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty remaining contents into application equipment or a mix tank. Fill the container $\frac{1}{4}$ full with water. Replace and tighten closures. Tip the container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Then offer container for recycling, if available, or puncture and dispose of container in a sanitary landfill, or by other procedures allowed by state and local authorities.

LIMITATION OF WARRANTY AND LIABILITY

Read the entire Directions For Use and Conditions of Warranties and Limitations of Liability before using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

By using this product, user or buyer accepts the following Conditions, Disclaimer of Warranties and Limitations of Liability.

CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of PRORICE. To the extent consistent with applicable law, all such risks shall be assumed by the user or buyer.

DISCLAIMER OF WARRANTIES: To the extent consistent with applicable law, PRORICE makes no other warranties, express or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond the statements made on this label. No agent of PRORICE is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein. To the extent consistent with applicable law, PRORICE disclaims any liability whatsoever for special, incidental or consequential damages resulting from the use or handling of this product.

LIMITATIONS OF LIABILITY: To the extent consistent with applicable law, the exclusive remedy of the user or buyer for any and all losses, injuries or damages resulting from the use or handling of this product, whether in contract, warranty, tort, negligence, strict liability or otherwise shall not exceed the purchase price paid or at PRORICE's election, the replacement of the product.
