

County-Level Usage for Carbaryl, Metolachlor, S-Metolachlor, Naled, Simazine, and Sodium Nitrate in California in Support of a San Francisco Bay Endangered Species Assessment

Purpose

- Calculate pesticide usage data for California as follows:
- (1) Average annual pounds applied across five years (1994-1998),
 - (2) Average annual area treated across five years (1994-1998),
 - (3) Average, Maximum, 95th Percentile, and 99th Percentile for the application rate for each year (1994-1998).
 - (4) Total Pounds for each year (1994-1998),
 - (5) Average pounds and application rates by pesticide and county,
 - (6) Application rates by pesticide and site,
 - (7) Pounds applied by site and pounds applied by county for each pesticide and year.

Notes on Calculating Average Annual Values

When calculating Average annual pounds applied and Average annual area treated (but not Application rates) across five years, zeros are added when no usage or area is reported for a certain year. Records with missing values for a certain year (i.e., unknown non-zero values) remain as missing.

Application Rate Estimation

Application rate is calculated as "pounds of active ingredient applied" divided by "acres treated"

Data Source

Pesticide Use Report Data, California Department of Pesticide Regulation

Data Description

Years: 1994 through 1998
58 counties for each year

Pesticides analyzed (total of 5)

Carbaryl, Metolachlor, Naled, Simazine, and Sodium Nitrate
No data was found for s-metolachlor for 1994-1998

Date Created:

20-Nov-09

Estimation Steps for Average and Annual Usage

- 1. Combine pesticide usage data for 58 counties for all five years.
- 2. Keep information only on 6 chemicals of interest.
- 3. Application Rate: Calculate across all observations for five years for each chemical-county-site-unit treated combination:

Average, Maximum, 95th Percentile, 99th Percentile for application rates, and the Number of records.
Units for application rate are pounds per unit area treated
The number of records represents the number of non-missing records used to calculate average/max/percentile values.

- 4. Pounds Applied and Area Treated: Calculate for each year and chemical-county-site-unit treated combination: Total pounds applied, Total area treated, and the Number of records.
The number of records represents the number of non-missing records used to calculate average pounds applied and average area treated.
- 4a. Combine estimated values for all five years.
- 4b. Calculate five-year Average annual pounds applied and Average annual area treated.
- 5. Populate chemical, county, and site names.

Output Variables

Pesticide Use 1994-1998

Active Ingredient, County, Site Name, Average Annual Pounds Applied, Number Records Pounds, Average Annual Area Treated, Unit Area Treated, Number Records Area, Average Application Rate, 95th Percentile Application Rate, 99th Percentile Application Rate, Maximum Application Rate, Number Records Rate.

Total Annual Usage

Active Ingredient, County, Site Name, Total Pounds 1994, Total Pounds 1995 Total Pounds 1996 Total Pounds 1997 Total Pounds 1998
Average Annual Pounds Applied, Number Records Pounds,
Total Area 1994, Total Area 1995, Total Area 1996, Total Area 1997, Total Area 1998, Average Annual Area Treated, Unit Area Treated, Number Records Area, Average Application Rate, 95th percentile Application Rate, 99th percentile Application Rate, Maximum Application Rate, Number Records Rate.

Estimation Steps for Aggregated Usage

- 1. Combine pesticide usage data for 58 counties for all five years.
- 2. Keep information only on 6 chemicals of interest.
- 3. Application Rate: Calculate across all observations for five years for each chemical-county-unit treated combination:

Average, Maximum, 95th Percentile, 99th Percentile for application rates, and the Number of records.
Units for application rate are pounds per unit area treated
The number of records represents the number of non-missing records used to calculate average/max/percentile values.

- 4. Pounds Applied and Area Treated: Calculate for each year and chemical-county-unit treated combination: Total pounds applied, Total area treated, and the Number of records.
The number of records represents the number of non-missing records used to calculate average pounds applied and average area treated.
- 4a. Combine estimated values for all five years.
- 4b. Calculate five-year Average annual pounds applied and Average annual area treated.
- 5. Populate chemical and county names.
- 6. Rate by site, Pounds by site, and Pounds by county use similar procedures but aggregate the data as required.

Notes on the Output

Missing values are presented as blanks.

Error Notes

No error files with identified errors are available from California Department of Pesticide Regulation for 1994-1998. Therefore, this analysis does not account for potential data outliers.
