

County-Level Usage for Carbaryl, Metolachlor, S-Metolachlor, Naled, Simazine, and Sodium Nitrate in California in Support of a San Francisco Bay Endangered Species Assessment

Purpose

Calculate pesticide usage data for California as follows:

- (1) Average annual pounds applied **across nine years (1999-2007)**,
- (2) Average annual area treated **across nine years (1999-2007)**,
- (3) Average, Maximum, 95th Percentile, and 99th Percentile for the application rate for each year (1999-2007).
- (4) Total Pounds for each year (1999-2007),
- (5) Average pounds and application rates by pesticide and county,
- (6) Application rates by pesticide and site,
- (7) Pounds applied by site and pounds applied by county for each pesticide and year.

Notes on Calculating Average Annual Values

When calculating Average annual pounds applied and Average annual area treated (but not Application rates) across nine years, zeros are added when no usage or area is reported. Records with missing values for a certain year (i.e., unknown non-zero values) remain as missing.

Application Rate Estimation

Application rate is calculated as "pounds of active ingredient applied" divided by "acres treated"

Data Source

Pesticide Use Report Data, California Department of Pesticide Regulation

Data Description

Years: 1999 through 2007
58 counties for each year

Pesticides analyzed (total of 6)

Carbaryl, Metolachlor, S-Metolachlor, Naled, Simazine, and Sodium Nitrate

Date Created:

20-Nov-09

Estimation Steps for Average and Annual Usage

1. **Combine pesticide usage data for 58 counties for all nine years.**
2. Keep information only on 6 chemicals of interest.
3. **Application Rate: Calculate across all observations for nine years for each chemical-county-site-unit treated combination:**
 - Average, Maximum, 95th Percentile, 99th Percentile for application rates, and the Number of records.
 - Units for application rate are pounds per unit area treated
 - The number of records represents the number of non-missing records used to calculate average/max/percentile values.

4. **Pounds Applied and Area Treated:** Calculate for each year and chemical-county-site-unit treated combination: Total pounds applied, Total area treated, and the Number of records. The number of records represents the number of non-missing records used to calculate average pounds applied and average area treated.
 - 4a. Combine estimated values for all nine years.
 - 4b. Calculate **nine-year** Average annual pounds applied and Average annual area treated.
5. Populate chemical, county, and site names.

Output Variables

Pesticide Use_1999_2007

Active Ingredient, County, Site Name, Average Annual Pounds Applied, Number Records Pounds, Average Annual Area Treated, Unit Area Treated, Number Records Area, Average Application Rate, 95th Percentile Application Rate, 99th Percentile Application Rate, Maximum Application Rate, Number Records Rate.

Total Annual Usage

Active Ingredient, County, Site Name, Total Pounds 1999, Total Pounds 2000, Total Pounds 2001, Total Pounds 2002, Total Pounds 2003, Total Pounds 2004, Total Pounds 2005, Total Pounds 2006, Total Pounds 2007, Average Annual Pounds Applied, Number Records Pounds, Total Area 1999, Total Area 2000, Total Area 2001, Total Area 2002, Total Area 2003, Total Area 2004, Total Area 2005, Total Area 2006, Total Area 2007, Average Annual Area Treated, Average Application Rate, 95th percentile Application Rate, 99th percentile Application Rate, Maximum Application Rate, Number Records Rate.

Estimation Steps for Aggregated Usage

1. **Combine pesticide usage data for 58 counties for all eight years.**
2. Keep information only on 6 chemicals of interest.
3. **Application Rate: Calculate across all observations for eight years for each chemical-county-unit treated combination:**
 - Average, Maximum, 95th Percentile, 99th Percentile for application rates, and the Number of records.
 - Units for application rate are pounds per unit area treated
 - The number of records represents the number of non-missing records used to calculate average/max/percentile values.
4. **Pounds Applied and Area Treated:** Calculate for each year and chemical-county-unit treated combination: Total pounds applied, Total area treated, and the Number of records. The number of records represents the number of non-missing records used to calculate average pounds applied and average area treated.
 - 4a. Combine estimated values for all eight years.
 - 4b. Calculate **eight-year** Average annual pounds applied and Average annual area treated.
5. Populate chemical and county names.
6. Rate by site, Pounds by site, and Pounds by county use similar procedures but aggregate the data as required.

Notes on the Output

Missing values are presented as blanks.

Error Notes

Errors identified in the process of estimating outliers by California Department of Pesticide Regulation are treated as follows:
 Application rate, area treated and pounds applied values are replaced with missing values when the "error" file indicated a potential error:
 "Pounds of AI per area treated is greater than 200 for non-fumigants or 1,000 for fumigants, or pounds of product per area treated is greater than 50 times the median rate for this chemical"
 "Pounds of product divided by the area treated is greater than an outlier limit set by a neural network procedure".
 Errors are reported for all nine years.
 The "outliers" files for 2001 is in a different format than that for other years. Error data were brought to the same format for processing.

ted for a certain year.

records.
