

Appendix H: List of Citations Accepted and Rejected by ECOTOX Criteria.

The citations in this appendix were considered for inclusion in ECOTOX. Citations include the ECOTOX Reference number, as well as rejection codes (if relevant). Reference in section H.1 include ETU (major degradate of mancozeb and maneb) related article accepted by ECOTOX and OPP and cited within this risk assessment and a brief description of the study. References in section H.2 were for articles relevant to mancozeb, maneb, and ETU, accepted by ECOTOX and OPP but were not cited within the risk assessment. References in section H.3 were articles relevant to mancozeb, maneb, and ETU related articles which were accepted by ECOTOX, but not by OPP. In order to be included in the ECOTOX database, papers must meet the following minimum criteria:

- (1) the toxic effects are related to single chemical exposure;
- (2) the toxic effects are on an aquatic or terrestrial plant or animal species;
- (3) there is a biological effect on live, whole organisms;
- (4) a concurrent environmental chemical concentration/dose or application rate is reported; and
- (5) there is an explicit duration of exposure.

Section H.4 includes the list of exclusion terms and descriptions for citations not accepted by ECOTOX. For mancozeb, maneb, and ETU, there were hundreds of references that were not accepted by ECOTOX for one or more of the reasons included in section H.4. A full list of the citations reviewed and rejected by the criteria for ECOTOX is listed in section H.5.

- the toxic effects are related to single chemical exposure;
- the toxic effects are on an aquatic or terrestrial plant or animal species;
- there is a biological effect on live, whole organisms;
- a concurrent environmental chemical concentration/dose or application rate is reported; and
- there is an explicit duration of exposure.

H.1. ECOTOX accepted study on ETU which was used qualitatively in the risk assessment.

The bolded number preceding the citation represents the ECOTOX reference number.

ECOTOX Record Number and Citation: 90116 George P. Datson, John M. Rogers, Donald J. Versteeg, Thomas D. Sabourin, Donald Baines, and Sarah S. Marsh- 1991. Interspecies Comparisons of A/D Ratios Are Not Constant across Species. Society of Toxicology.

Purpose of Review (DP Barcode or Litigation): Litigation

Date of Review: August 15, 2007

Summary of Study Findings: *Xenopus laevis* adult female and developmental stages were exposed to ETU via water column under static water conditions with daily renewal for 4 days. The developmental stages were from the blastulation (shortly after fertilization) to the free swimming tadpole stage. The adult toxic endpoint observed for was mortality. Concentrations were 0, 500, and 1000 mg/liter with 5 adults per concentration. Developmental stages were assessed for morphological developmental, growth (length), and death during development. Developmental concentrations were 0, 100, 250, 500, 750, and 100 mg/liter with 40 embryos per concentration. No adverse affects were observed at the highest concentration tested. The reason this study can only be used in a qualitative basis is because there was no indication if the gel was removed from the organisms during the blastulation stage; therefore, there is uncertainty regarding the amount of test substance the organism was actually exposed to.

Description of Use in Document (QUAL, QUAN, INV): Qualitative

H.2. Articles relevant to mancozeb, maneb, and ETU, accepted by ECOTOX and OPP but were not cited within the risk assessment because endpoints were less sensitive than existing data.

(H.2.) Mancozeb

H.4. List of exclusion terms utilized for reviewing studies considered for ECOTOX database

Review--all toxicity tests reported elsewhere. If the publication is applicable to one of the ECOTOX databases, the bibliography is skimmed and any applicable articles are ordered.

Methods--no usable toxicity tests. Reports of methods of conducting tests, determination or purification of chemicals, etc. Methods publications are selected to be ordered for the ECOTOX toxicology methods information file (Methfile).

Modeling only, no new organism exposure data. Modeling studies may report original toxicity tests performed as comparisons or as a basis for extrapolation; order the paper if it is not clear from the abstract.

Other ambient conditions--effects on organisms from changes in conditions other than addition of chemicals, including radioactivity, ultraviolet light (UV), temperature, pH, salinity, dissolved oxygen (DO), or other water, air, or soil parameters.

Biological Toxicant--includes venoms, fungal toxins, *Bacillus thuringiensis*, other plant, animal, or microbial extracts or toxins.

Drug--testing for drug effects and side-effects .

Effluent, sewage, or polluted runoff.

Mixture--no single chemical tests reported.

Nutrient studies--in situ chemicals tested as nutrients.

No Species--no organism present or tested or unable to verify a species or exposure of dead organism.

In Vitro studies, including exposure of cell cultures and excised tissues.

Bacteria as test organism, including **Microtox** tests, or other microbial organisms.

Yeast as a test organism is historically not coded in ECOTOX.

No Toxicity Data--publications which are not toxicology studies.

Human Health effects; studies with human subjects or with animal subjects as surrogates for human health risk assessment.

No Concentration--no usable dose or concentration reported; identified after examination of full paper. Includes lead-shot studies which lack dose information or give only number of pellets. Concentrations reported only in log units are not coded.

Sediment Concentration--chemical concentration reported in sediment only. Sediment studies are coded for AQUIRE only if a water concentration of the added chemical is also reported; order the publication if unclear from the abstract.

No Duration reported, identified after examination of full paper.

Incident papers--reports of animal deaths by poison, etc. Lacks usable concentration or duration or both.

Survey studies--measuring amounts of chemical present, but no usable quantification of exposure. Lacks either usable concentration or duration or both.

Fate: Studies reporting only what happens to the chemical in abiotic matrices

Food Studies, no chemical and effects information are reported

PUBL AS, author has results were published in a different format. For example, may be used for a Ph.D. dissertation when the same results were also published in a peer-reviewed journal.

NON-ENGLISH or **FORE,** paper was published in a foreign language.

H.5. List of mancozeb, maneb, and ETU related studies excluded from ECOTOX database
