APPENDIX G: BIBLIOGRAPHY OF ECOTOX OPEN LITERATURE DATA EXCLUDED OR NOT EVALUATED

(List of citations for Paraquat Dichloride that were Excluded from ECOTOX, and papers that have not been fully reviewed by ECOTOX. These papers are potentially applicable but have not been fully reviewed, and include applicable studies reviewed but not coded, potentially applicable studies on order and not yet reviewed or coded, and studies not evaluated by ECOTOX)

Explanation of OPP Acceptability Criteria and Rejection Codes for ECOTOX Data

Studies located and coded into ECOTOX must meet acceptability criteria, as established in the Interim Guidance of the Evaluation Criteria for Ecological Toxicity Data in the Open Literature, Phase I and II, Office of Pesticide Programs, U.S. Environmental Protection Agency, July 16, 2004. Studies that do not meet these criteria are designated in the bibliography as “Accepted for ECOTOX but not OPP.” The intent of the acceptability criteria is to ensure data quality and verifiability. The criteria parallel criteria used in evaluating registrant-submitted studies. Specific criteria are listed below, along with the corresponding rejection code.

- The paper does not report toxicology information for a chemical of concern to OPP; (Rejection Code: NO COC)
- The article is not published in English language; (Rejection Code: NO FOREIGN)
- The study is not presented as a full article. Abstracts will not be considered; (Rejection Code: NO ABSTRACT)
- The paper is not publicly available document; (Rejection Code: NO NOT PUBLIC (typically not used, as any paper acquired from the ECOTOX holding or through the literature search is considered public)
- The paper is not the primary source of the data; (Rejection Code: NO REVIEW)
- The paper does not report that treatment(s) were compared to an acceptable control; (Rejection Code: NO CONTROL)
- The paper does not report an explicit duration of exposure; (Rejection Code: NO DURATION)
- The paper does not report a concurrent environmental chemical concentration/dose or application rate; (Rejection Code: NO CONC)
- The paper does not report the location of the study (e.g., laboratory vs. field); (Rejection Code: NO LOCATION)
- The paper does not report a biological effect on live, whole organisms; (Rejection Code: NO IN-VITRO)
- The paper does not report the species that was tested; and this species can be verified in a reliable source; (Rejection Code: NO SPECIES)
- The paper does not report effects associated with exposure to a single chemical. (Rejection Code: NO MIXTURE). It should be noted that all papers including data on pesticide mixtures are considered.

Additionally, efficacy studies on target species are excluded and coded as NO TARGET.

Data that originated from the OPP Pesticide Ecotoxicity Database is coded as NO EFED. These data are already available to the chemical team.

Chem Codes: Chemical of Concern: PQT Rejection Code: ABSTRACT.

Douce, R., Job, D., and Joyard, J. (New Approaches About Crop Protection: Towards the Creation of New Herbicides and Transgenic Plants Resistant to Herbicides. Comptes rendus de l'academie d'agriculture de france; 81 (6). 1995. 47-62. Ab - biosis copyright: biol abs. The impressive increases in crop productivity achieved over the last forty years have largely resulted from the use of herbicides. In this article we describe the mode of action of various known herbicides as well as new approaches for the design of chemicals behaving as herbicides. Resistance conferred by the transfer of engineered genes encoding either less-susceptible proteins or enzyme capable to metabolize the herbicide is also described.

Fujita, K. (1973). Cases of Chemical Burn of Cornea by a Herbicide, 1,1’s,-Dimethyl-4,4’-Bipyridinium Dichloride (Paraquat Dichloride). *Nippon noson igakkai zasshi (J. Jap. Ass. Rural med.)* 22(3): 194-195; 1973 ab - pestab the author describes four cases of severe keratoconjunctivitis caused by accidental contact of
paraquat dichloride with external eye parts, which required prolonged treatment. The first case was caused by drops of 24% technical paraquat dichloride splashed into the eyes. After quick rinsing of the eyes, the patient was admitted to the hospital with subjective symptoms of impaired vision (0.6 of normal) and severe pain in the eyes. Clinical findings were ophthalmomalpebral conjunctivitis, severe hyperemia of eyes, marked edema of bulbar conjunctiva, and overall erosion of cornea, with slight redness of skin of the eye lids. Corneal sensation was reduced. No damage was found in the anterior chamber and vitreous body, suggesting the chemical burn did not reach the deeper parts. The keratoconjunctivitis disappeared almost completely after two months, but slight hyperemia remained. The corneal erosion disappeared after one week, and subjective symptoms were improved after two weeks. The second and third cases were caused by contact with a 50-fold diluted solution. The second case was the most serious and recovery most prolonged, probably because of insufficient rinsing and failure to seek medical attention for two days. The fourth case was caused by 24% technical material, but symptoms were slight, probably due to washing the eyes immediately under tap water. In accordance with the manufacturer's recommendations, patients were treated with general and topical application of antibiotics. An ocular ointment for corneal erosion and anesthetic eye drops for severe eye pain are recommended. It is hoped that in at least one's own garden the weeds would be pulled out by hand.

Hanawa, M., Fujisawa, M., Akimoto, Y., Oishi, M., Kobayashi, H., Osuji, H., Nishida, S., Kitahara, K., and Otani, T. ( An Autopsy Record of Interstitial Pneumonia Due to Acute Intoxication by Paraquat Dichloride. Nippon naika gakkai zasshi (j.:Jpn. Soc. Int. Med.) 66(11): 1597-1598 1977 ab - pestab. A case involving a 32 year old housewife who swallowed 15 ml of a 24% formulation of paraquat dichloride on june 17, 1976 with suicidal intent was described. Digestive system symptoms such as vomiting appeared just after intake. Steroids and a laxative were given after the cause of poisoning was discovered. Pyrexia, edema, and cyanosis appeared beginning on june 22, with the bun rising to 100 mg/dl; then the patient was transferred to the authors' hospital. At the time, crepitant rales were heard on the lower left lung. The ers was 97 mm/h, wbc 11700 (neutrophils, 94%), got 47, ldh 535, alkaline phosphatase 41 units, creatinine 7.7 Mg/dl and pat02 and pac03 23 and 28 mmhg, respectively. Renal disturbance was restored with large amounts of steroids and diuretics. Comfortable sleep became impossible on july 7 due to gasping. The chest x-ray revealed frosted glass-like and cord-like shadows in both lower lung fields. The patient showed a slight response to 60 mg/d of prednisolone; however, she died suddenly on july 23. Left pneumothorax was revealed after death. At autopsy, thickening of the alveolar septum (slighter proliferation of fibrocytes), degeneration and hemorrhage of kidney tubules, adrenal atrophy, and degeneration of the central vein of the liver were recognized. In japan, this is the fourth case of interstitial pneumonia due to paraquat dichloride. Foam cells were not observed in this case.

of 24% paraquat dichloride is described. Nausea and vomiting occurred 1-2 hr after uptake followed by upper abdominal pain and jaundice. When oliguria and raised bun were observed, peritoneal perfusion was performed to improve the amount of urine. From the 10th hospital day, dyspnea and diffuse density in both lungs appeared. On the day 15 he died of respiratory failure. Findings upon autopsy included a strong image of interstitial pneumonia, stagnation of bile and cellular denaturation in the liver, denaturation of proximal tubules with interstitial edema in the kidney, infiltration of cells showing non-specific acute renal failure, and a partial lack of the mucosal layer and inflammatory cellular infiltration of the esophagus. Although the acute renal failure could be treated, the specific, so-called "paraquat-lung" could not be prevented.

Morito, T., Wada, H., Kinoshita, N., Morita, N., Yamaguchi, T., Okuda, H., Hayashi, H., Nakano, M., and Shuzui, T. (An Autopsy Case of Paraquat Poisoning. *Mie igaku (J. Med. Mie prefect. Univ.) 23(4): 518-521 1980 (21 references) ab - pestab. A 29-yr-old man committed suicide by ingesting about 2000 ml of a paraquat formulation. He was hospitalized shortly thereafter with slightly clouded consciousness, redness and erosion of the oral cavity and pharynx, and low blood pressure. Biochemical data on hospital day 2 indicated severe damage to the liver and kidneys; bun, 23.5; Creatinine, 3.2; Gpt, 29; and got, 78. Liver and kidney functions were worse on day 3. Blood gas analysis suggested an a-c block and metabolic acidosis. The chest x-ray was not abnormal. The patient died on day 3. Autopsy revealed denaturation of the kidney tubules, fatty degeneration with slight stagnation of liver hepatic cells, pulmonary edema, diffuse infiltration of neutrophils in the lung, hemorrhagic necrotic foci with exfoliation of the alveolar epithelium, swollen zona glomerulosa and atrophy and necrosis of the zona fasciculata.*

Ngugi, G. and Mbaria, G. (Sustainability in Agricultural Development: Evaluation of Environmental Impacts of Large-Scale Coffee Enterprises in Kiamba Division, Central Kenya. *International journal of environmental health research;* 5 (1). 1995. 7-17. Ab - biosis copyright: biol abs. This paper presents crucial highlights of a study carried out to assess the sustainability of large-scale coffee production in kiamba division of central kenya. The result show that to maintain, and probably increase on the 1991 average production of 140 metric tonnes requires the application of massive quantities of increasingly expensive fertilizers and potent biocides. Secondly, the acquisition of success and attainment of abnormal profits in the estates demand lowly-paid labour (mean, ksh 770 or us $11 per month). The effects are a poisoned environment on one hand and severely exploited employees who, out of the sheer need for survival, have to live and work within this environment. The paper recommends a re-assessment of land acquisition policies to enable widespread participation of the local population in multi-crop farming and a review of agricultural policies to provide stipulations on what agricultural production practices ought to be adopted in different eco.
