

# Marathon Carey-McFall Co.

120 South Arch Street  
Montoursville, PA 17754  
Congressional District 10  
EPA ID #: PAD980550537  
Site Property Area: 3 Acres  
Last Updated: 05/13/2010

## Status

---

Currently, the RCRA Corrective Action (CA) information is summarized in the Final Environmental Indicator Inspection Report dated January 2003. Discussions with PADEP have resulted in a decision to perform further characterization of certain areas at the facility. These areas include: Chromium Treatment Area including underground piping (near new fabrication shop); Bonderizing (metal plating) Area including spill drains (former Area 1); Former Chromium Treatment Sheds (sand filter and sedimentation tanks) and related effluent discharge lines; Former Waste Storage Tank; Former Drum Storage Area; Electrical Transformer Pad; and the Montoursville Stormwater System.

Field activities for the investigation into the areas mentioned above occurred from March 2009 into April 2009. A Limited Phase II Investigation Report was submitted in September 2009 providing data, conclusions, and recommendations from the investigation. The results indicated that there were no human or groundwater exposure pathways of concern from former operations with the exception of a need for further assessment of the indoor air pathway. A meeting was held on-site with a new consultant to discuss the investigation requirements. Sampling of soil vapor to assess the indoor air pathway is expected to begin in the summer of 2010.

EPA will update this fact sheet when this work is complete and a determination has been made whether or not the environmental indicators have been met or if corrective action is required by the facility.

## Facility Description

---

The Marathon Carey-McFall facility was sold in 1982 and is now named Logue Industries, Inc. (Logue). The facility is a 3-acre parcel consisting of the remainder of the original manufacturing building and a parking lot.

Logue utilizes the facility to fabricate metals and does not currently generate hazardous waste. Historically, the facility was used to manufacture furniture, venetian blinds, and Christmas trees and ornaments. Processes included cold rolling of steel and aluminum and metal finishing.
