RE: 2008 Focused Corrective Measures Study Work Plan
Caribe GE Distribution Transformers Inc., Vieques, PR
EPA ID: PRD000692582

Dear Mr. Kolodziej:

The United States Environmental Protection Agency (EPA) has evaluated the 2008 Focused Corrective Measures Study Work Plan. After several discussions it was agreed to the following changes: (1) installation of one monitoring well west of the main building, in the parking lot area; (2) installation of transducers in the monitoring wells; and (3) collection of ground water elevation data for at least one (1) year. These changes will be included in an updated Work Plan.

A Quality Assurance Project Plan (QAPP) should be prepared based on the Uniformed Federal Policy. Copy of this policy is found in: <http://www.epa.gov/superfund/programs/clp/guidance.htm>.

The Work Plan and the QAPP should be submitted to EPA within 30 days after the receipt of this letter. Once the updated work plan and QAPP are approved, sampling activities may begin. Submit one electronic copy (pdf) of each document for review. A paper copy will be required once the documents are finalized.

If you have any questions, please contact Mr. Jesse Avilés, of my staff, at 787-977-5882 or at aviles.jesse@epa.gov.

Sincerely,

Ramon Torres, Acting Chief
Response and Remediation Branch
