

NOTICE for PUBLIC COMMENT

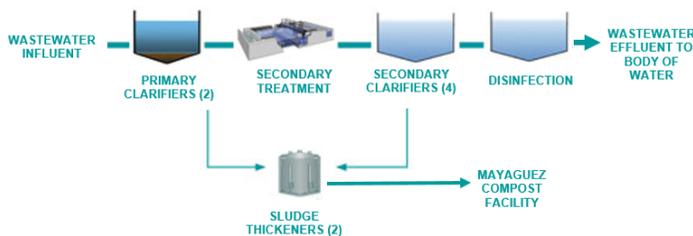

PRASA Mayaguez Regional Waste Water Treatment Plant Mayaguez, Puerto Rico

SUMMARY

The Puerto Rico Aqueduct and Sewer Authority (PRASA) has applied for renewal of its National Pollutant Discharge Elimination System (NPDES) permit for the Mayaguez Regional Waste Water Treatment Plant (WWTP) in Mayaguez.

The Mayaguez Regional Waste Water Treatment Plant (WWTP) treats sanitary wastewater through secondary treatment. Wastewater from the treatment plant is discharged to the Atlantic Ocean.

The NPDES permit ensures that the amount of discharge and the amount of contaminants in the discharge remains below levels that are safe for the environment and public health consumption.

DRAFT PERMIT CONDITIONS

The permit establishes numeric water quality effluent limitations for several pollutants, including pH, dissolved oxygen, temperature, taste and odor, color, turbidity, suspended solids, and metals.

The permit limits the WWTP's numeric flow effluent pursuant to Puerto Rico Environmental Quality Board (PREQB) Water Quality Certificate, Puerto Rico Water Quality Standards NPDES Regulations (40 CFR Part 122).

Under NPDES the permit specifies requirements for recording and reporting monitoring results of the numeric effluent limitations described above.
