MEMORANDUM

DATE: June 10, 1992

SUBJ: Comments on Final PA-Plus for Jet-Line Services, Inc. Lowell, MA
CERCLIS No. MAD047075734

FROM: Ernest Waterman *EW*

TO: Files

- 1) The PA-Plus should identify two additional areas as Areas of Concern. These are 1) Spill areas stated to be behind the loading dock area (see Table 3, page 8) and 2) unauthorized waste storage areas (see page 8).
- 2) The PA-Plus contains a conclusion from a Goldberg-Zoino Associates report that VOC detected beneath the site are indicative of regional groundwater quality. It should be noted that the highest VOCs detected were beneath AOC #3 and that wells upgradient and downgradient of AOC #3 show lower VOC levels. This is clear evidence that AOC #3 is a source of VOC release to groundwater.
