Re: Northbridge, Massachusetts
Sidney Covitch Property
Main Street

2-112

Dear Mr. Marques,

The Department of Environmental Quality Engineering - Division of Solid and Hazardous Waste has reviewed your December 18, 1985 letter outlining the proposed remedial action on the Covitch Property, Main Street, Northbridge. It involves installation of a groundwater recovery well and a gravel lined interceptor trench which extends to the bedrock surface, ties into building foundations on both ends, and has an impervious liner between the trench and the raceway. The groundwater will be run through an oil/water separator, an air stripping system and then discharged to the Northbridge sewer system. The collected oil will be pumped to a recovery tank located on-site. This remedial action is approved with the following provisions:

1. Liner specifications for the trench must be submitted to and approved by the DEQE - Division of Solid and Hazardous Waste.
2. Temporary and permanent sewer connection approvals must be obtained from DEQE - Division of Water Pollution Control.
3. Approval for the air stripping system must be granted by the DEQE - Division of Air Quality.
4. Monthly groundwater monitoring data of water before and after treatment must be submitted to the DEQE - Division of Solid and Hazardous Waste. This analysis should include total volatile organics and oil and grease.
5. The oil collected on-site must be removed by a licensed hazardous waste hauler.
6. This system must remain in operation until approval for termination is granted by DEQE - Division of Solid and Hazardous Waste.

7. The Department must be notified at least three (3) business days in advance of anticipated dates for construction and implementation of the proposed remedial action. During Susan Corderman's leave of absence, Carol de Groot may be contacted at 792-7653.

Very truly yours,

John A. Desmond, Chief
Solid and Hazardous Materials
