John, The only electronic records for flow will be over the slag pond weir. I'm sure I can get you 5 years worth is you'd like. Off the top of my head, I'm thinking an average of maybe 4.5 mgd and a max of 7.0 mgd. Circ water flows are based on the pump curve/river elevation equation coupled with run times. I agree it would be a great idea to get together and better flesh out the details you need at some point soon.

Flow Data

To  
cc  
Subject

Allan,

As I mentioned in my voice mail, EPA/NHDES has questions on what is the actual flow from the outfalls at Merrimack Station. What is contained in the application is not consistent with other data sources. I assume the Station keeps electronic records of outfall flow measurements. Is it possible to get a copy of the last five years of flow records?

Talk to you soon ... thanks,

John
