Hi Allan -

I'm filling in for John King on Merrimack while he's recovering from hip surgery. One question I have for you is in regard to the gas side ash wash water. Your 5/10/10 application lists U1 air heater, boilers, precipis, etc., with a total flow of 9750 gpd. Could you please let me know exactly what equipment the "etc." refers to? These need to be listed in the permit.

Specifically, please list any metal process equipment that is washed, including, but not limited to: U2 air pre-heater wash, SCR catalyst wash, furnace wash, stack and breeching wash, fan wash, and combustion air heater wash. Also, are these batch discharges? Please let me know the total amount discharged during these cleaning operations. Thanks.
