Subject WET Test

Allan,

Attached is the protocol for the acute toxicity WET test. As I mention in my voice mail to you, please ensure the dilutant water can not adversely effect the test. If there are concerns pertaining to using the Merrimack River water as the dilutant, then laboratory water needs to be used. The laboratory, though, needs to be chemical similar to the make up of the Merrimack River.

Any question, please do not hesitate to contact me.

John
