Re: Remediation General Permit (RGP) – Notice of Intent (NOI)
Hess-branded Gasoline Station #21316
354 Main Street
Gloucester, Massachusetts 01930-3041
MassDEP RTN 3-12486

To Whom It May Concern:

At the request of Hess Corporation (Hess), EnviroTrac Ltd (EnviroTrac) is submitting the attached RGP-NOI for the above-referenced location, referred to as the "site." The RGP-NOI form is included as **Attachment A**. The site is currently a Hess-branded gasoline station. Temporary construction dewatering will be required to facilitate the upgrade of the gasoline dispensers. Gauging of monitoring wells recently completed at the site revealed groundwater to be located at 1 to 2 feet below grade surface. Excavations to approximately 4 feet below grade surface will be required for the dispenser upgrade. The locations of the site and discharge receiving waters (Inner Harbor) are depicted on **Figure 1**. Also attached is a site sketch (**Figure 2**), which depicts the existing site features and the catch basin which represents the proposed discharge point.

During the construction dewatering process, groundwater will be pumped from the excavation into a fractionation tank for settlement, and then treated through two bag filters (placed in series), two 700-pound liquid phase carbon units (placed in series), and two cartridge filter (placed in series). A schematic drawing is included as **Figure 3**. The treated effluent will be discharged via the catch basin on the property, which discharges to drainage located in Main Street, which then discharges to an outfall at Inner Harbor. The design flow of the treatment system is 35 gallons per minute (35 gpm), and the average discharge rate of treated groundwater is anticipated to be 30 gpm.

On February 21, 2008, a groundwater sample was obtained from an existing monitoring well. Based on the analytical data, total suspended solids (TSS), total petroleum hydrocarbons (TPH), benzene, toluene, xylenes, bis (2-ethylhexyl phthalate), zinc and iron were detected. Compounds reported at concentrations exceeding the applicable Effluent Limitations published in Appendix III of the RGP under the National Pollutant Discharge Elimination System (NPDES) for Discharges in Massachusetts include bis (2-ethylhexyl phthalate), zinc and iron. The laboratory analytical report supporting this submittal is included in **Attachment B**.

The site is not located at or near any location specified in the RGP as subject to consultation with the U.S. Fisheries and Wildlife Service or the National Fisheries Service. According to the National Park Service's National Register Information System (NRIS) (<http://www.nr.nps.gov/>), the nearest listed historical site is the Adventure Schooner located at State Fish Pier, approximately 700 feet east of the site. The Massachusetts Historical Commission's Massachusetts Cultural Resource Information System (MACRIS) (<http://www.sec.state.ma.us/mhc/>) listed more than 1,300 sites in Gloucester. The nearest Massachusetts-listed site, the Friend House at 6 Herrick Street, is located approximately 375 feet west-southwest of the site. Based on the distances to the site, the discharge will not likely adversely affect the historical sites. Copies of the NRIS and MACRIS listings are included in **Attachment C**.

The excavation and dewatering will be conducted as a post-Response Action Outcome (RAO) response action in accordance with provisions of the Massachusetts Contingency Plan (MCP) as set forth at 310 CMR 40.1067. Therefore, completion and submittal of Massachusetts Department of Environmental Protection (MassDEP) Application Form BRPWM 12 or payment of a fee to the Commonwealth of Massachusetts are not required.

If you have any questions or require further information, please contact the undersigned at (781) 769-5005.

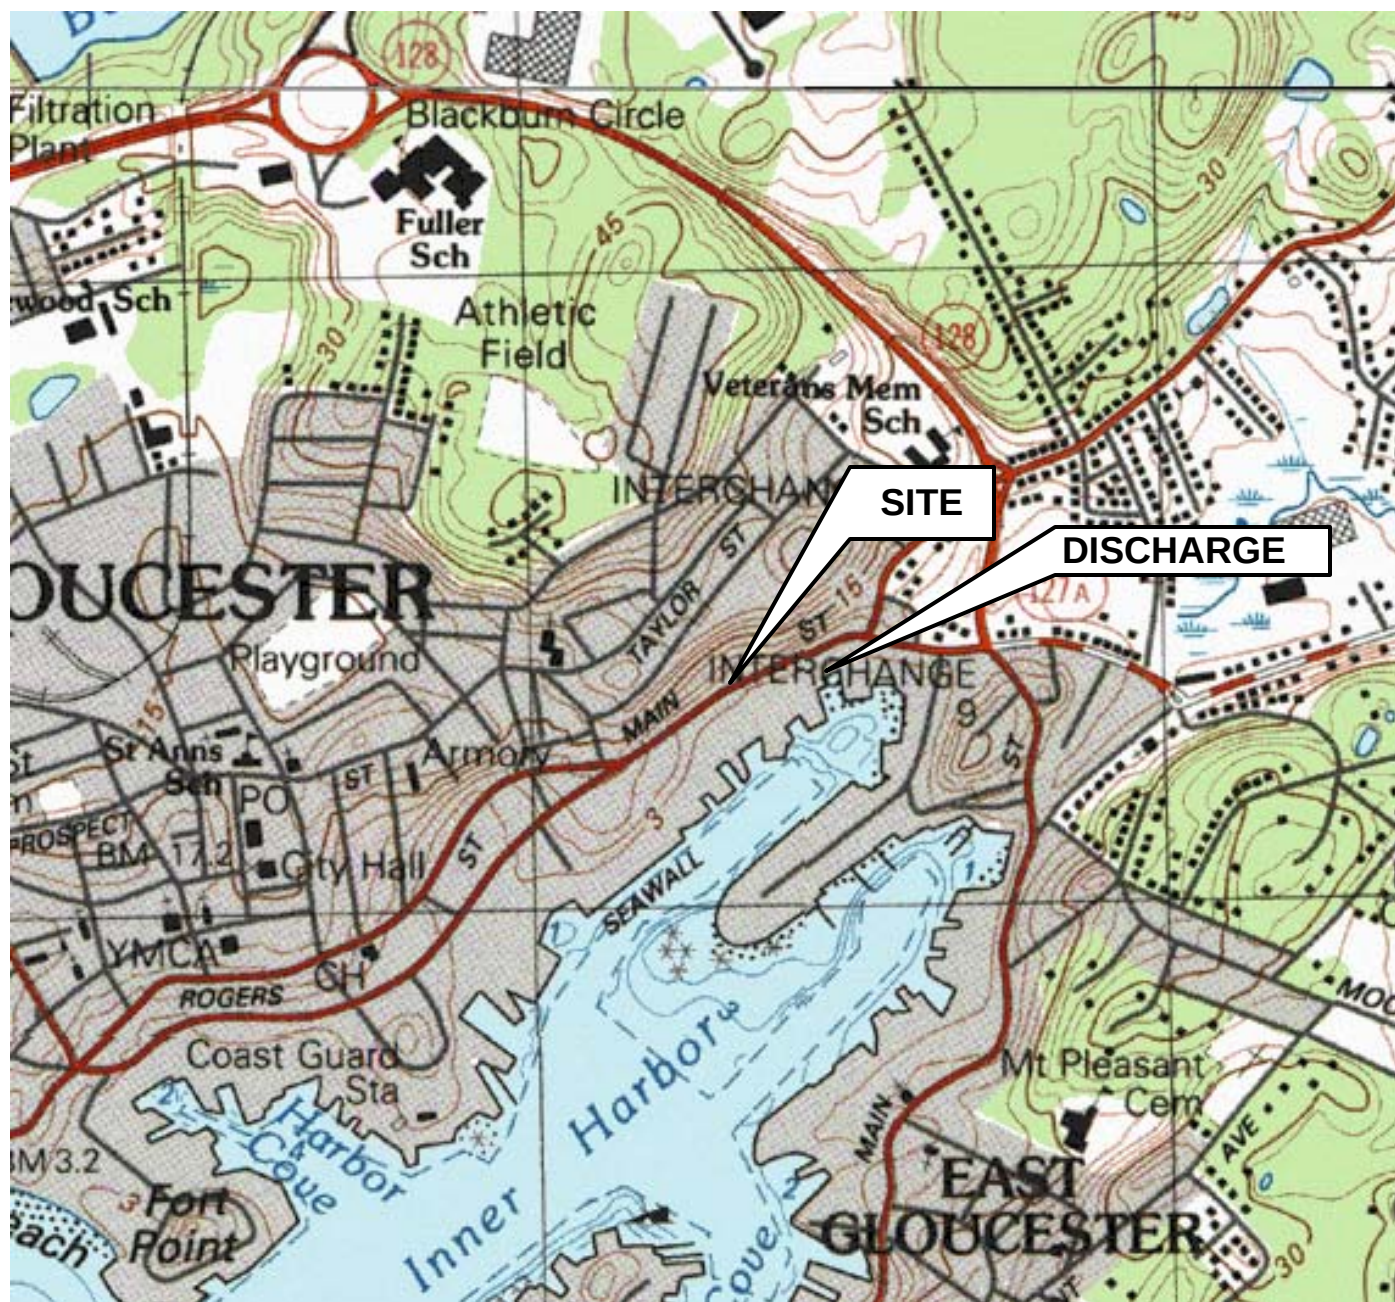

Sincerely,
EnviroTrac Ltd.

Hi Pat,

For your sample id, TPG, the bottle for dissolved metals was preserved with NaOH and Ascorbic acid and not HNO3.

Please advise.

Frank, as we discussed this morning, on the chain we specified "8270 BNA" and the lab report was limited to PAHs.
 We need the full 8270 list including acid- and neutral-extractables (including phthalates and phenols) ASAP.

Robert Szlachciuk will call regarding the 8260s including MTBE, TAME, and TBA. Apparently appropriate vials were submitted to the lab but 8260 was not specified on the chain. If you have the vials, please have them run for 8260s including MTBE, TAME, and TBA on a 48-hr TAT.

Thanks.
