1. INTRODUCTION

Ramboll Environ (RE) prepared a Notice of Intent (NOI) for a National Pollutant Discharge Elimination System (NPDES) General Permit for Remediation Activity Discharges, Massachusetts General Permit (RGP) for dewatering activities associated with stream remediation at the CertainTeed Roofing Plant located at 1077 Pleasant Street, Norwood, Massachusetts on behalf of the site owner, CertainTeed Roofing (CertainTeed) in July 2017. This document serves as supplemental information for the NOI submission and a revised NOI form. This NOI supplement is being submitted to the Massachusetts Department of Environmental Protection (MassDEP) and United States Environmental Protection Agency (USEPA) in accordance with the requirements of the Massachusetts General Permit No. MAG910000.

This NOI for an RGP is being submitted to account for site remediation activities being conducted at the facility. A portion of these activities include the dewatering of groundwater and/or excavated stream sediments to allow for the removal of contaminated soils and sediment and the construction of a light non aqueous phase liquid (LNAPL) control barrier along the river bank. For the purpose of this NOI, the "facility" is defined as the area located within the property boundaries of 1077 Pleasant Street, Norwood, Massachusetts. A copy of the revised NOI is included as **Attachment A**.

2. GENERAL FACILITY INFORMATION

General disposal site information for which this Phase I applies includes the following:

Property Owner/Facility Operator:	Steven Forrest Bird Incorporated d.b.a. CertainTeed Roofing 1077 Pleasant Street Norwood, Massachusetts 02062 Tel: (781) 278-0444
Owner/Facility Operator Contact:	Steven Forrest, Director of Construction steven.forrest@saintgobain.com Tel: (781) 278-0444
USGS Quadrangle:	Norwood, Massachusetts
Longitude, Latitude: (approximate)	71° 12' 29.0" W, 42° 10' 3.9" N
Disposal Site Zoning:	Industrial
County:	Norfolk

2.1 Facility Description

The facility is a CertainTeed Roofing manufacturing plant comprised of 12 buildings on 43.2 acres, located at 1077 Pleasant Street, Norwood, Massachusetts. It is bounded on the east by Pleasant Street, on the north by wooded land, and on the north and west by the Neponset River. A 3.65-acre portion of the plant is located to the south in the Town of Walpole. The Disposal Site (MassDEP

Release Tracking Number (RTN) 4-24105) where the proposed work is to occur is situated on an approximately 2-acre portion of the facility immediately adjacent to and in the Neponset River on the north/northeasterly portion of the property.

3. CONTAMINANT INFORMATION

On May 25, 2017, groundwater samples were collected from on-site monitoring well ENV-8MW and reported in the original NOI submission. On September 22, 2017, supplemental groundwater samples were collected from on-site monitoring well ENV-8MW for additional information required by the NOI. Groundwater samples collected were submitted to Alpha Analytical Laboratories, Westborough, Massachusetts (Alpha) for analysis of volatile organic compounds (VOCS) limited to MTBE, acetone, Tert-Butyl Alcohol, 1,4 Dioxane and Tertiary-Amyl Methyl Ether by EPA method 8260; phenol and phthalates by EPA method 8270; total cyanide, total residual chlorine, ammonia, hardness and; metals mercury, antimony, cadmium, copper, nickel, selenium, silver and zinc. Hardness was also measured in the receiving water. Supplemental groundwater laboratory analytical reports are provided in **Attachment B**.

Ramboll Environ has input the data into the NOI application and utilized Appendix V and the additional resource of the Remediation General Permit for calculation of the WQBEL concentrations. The calculations are included in **Attachment C**.

Ramboll Environ has also provided historical groundwater, soil and sediment analytical information including associated site maps in **Attachment D**.

4. DILUTION FACTOR

The receiving water for the indirect discharge of groundwater from the facility is the Neponset River, which empties into the Boston Harbor. Based on StreamStats data from this portion of the Neponset River, it was determined that the 7Q10 of the Neponset River at the site is 1.62 cubic feet per second (cfs). StreamStats data and calculations are provided in **Attachment E**. Based upon the 7Q10 flow and the design flow of 100 gallons per minute, the Dilution Factor calculated is 8.29, approved by the Massachusets Department of Environmental Protection, and the calculations and approval email are provided in **Attachment C.**

5. SUPPLEMENTAL INFORMATION

The facility is currently pursuing a USACE 404 Permit for the proposed dredging activities. **Attachment F** includes the USACE 404 Permit application and supporting information.

. ecei in ater information:

1. Name of receiving water(s):	Waterbody identification of receiving water(s):	Classification of receiving water(s):
Neponset River	MA73-01	B

Receiving water is (check any that apply): ☐ Outstanding Resource Water ☐ Ocean Sanctuary ☐ territorial sea ☐ Wild and Scenic River

2. Has the operator attached a location map in accordance with the instructions in B, above? (check one): ■ Yes ☐ No

Are sensitive receptors present near the site? (check one): ☐ Yes ■ No
If yes, specify:

3. Indicate if the receiving water(s) is listed in the State's Integrated List of Waters (i.e., CWA Section 303(d)). Include which designated uses are impaired, and any pollutants indicated. Also, indicate if a final TMDL is available for any of the indicated pollutants. For more information, contact the appropriate State as noted in Part 4.6 of the RGP. Pesticides, pathogens, algal growth, organic enrichment/oxygen depletion, PCBs, nutrients, sediment, turbidity, suspended solids, other (total solids)

4. Indicate the seven day-ten-year low flow (7Q10) of the receiving water determined in accordance with the instructions in Appendix V for sites located in Massachusetts and Appendix VI for sites located in New Hampshire.	1.62 cfs
5. Indicate the requested dilution factor for the calculation of water quality-based effluent limitations (WQBELs) determined in accordance with the instructions in Appendix V for sites in Massachusetts and Appendix VI for sites in New Hampshire.	8.29

6. Has the operator received confirmation from the appropriate State for the 7Q10and dilution factor indicated? (check one): ■ Yes ☐ No
If yes, indicate date confirmation received: 09/27/2017

7. Has the operator attached a summary of receiving water sampling results as required in Part 4.2 of the RGP in accordance with the instruction in Appendix VIII? (check one): ■ Yes ☐ No

C. ource ater information:

1. Source water(s) is (check any that apply):

■ Contaminated groundwater Has the operator attached a summary of influent sampling results as required in Part 4.2 of the RGP in accordance with the instruction in Appendix VIII? (check one): ■ Yes ☐ No	☐ Contaminated surface water Has the operator attached a summary of influent sampling results as required in Part 4.2 of the RGP in accordance with the instruction in Appendix VIII? (check one): ☐ Yes ☐ No	☐ The receiving water ☐ A surface water other than the receiving water; if so, indicate waterbody:	☐ Potable water; if so, indicate municipality or origin: ☐ Other; if so, specify:

2. Source water contaminants:	
a. For source waters that are contaminated groundwater or contaminated surface water, indicate are any contaminants present that are not included in the RGP? (check one): ☐ Yes ■ No If yes, indicate the contaminant(s) and the maximum concentration present in accordance with the instructions in Appendix VIII.	b. For a source water that is a surface water other than the receiving water, potable water or other, indicate any contaminants present at the maximum concentration in accordance with the instructions in Appendix VIII? (check one): ☐ Yes ☐ No
3. Has the source water been previously chlorinated or otherwise contains residual chlorine? (check one): ☐ Yes ■ No	

. isc ar e information

1.The discharge(s) is a(n) (check any that apply): ☐ Existing discharge ■ New discharge ☐ New source	
Outfall(s): Outfall A	Outfall location(s): (Latitude, Longitude) Latitude: 42°10’8.87” Longitude: -71°12’21.19”
Discharges enter the receiving water(s) via (check any that apply): ■ Direct discharge to the receiving water ☐ Indirect discharge, if so, specify: ☐ A private storm sewer system ☐ A municipal storm sewer system If the discharge enters the receiving water via a private or municipal storm sewer system: Has notification been provided to the owner of this system? (check one): ☐ Yes ☐ No Has the operator has received permission from the owner to use such system for discharges? (check one): ☐ Yes ☐ No, if so, explain, with an estimated timeframe for obtaining permission: Has the operator attached a summary of any additional requirements the owner of this system has specified? (check one): ☐ Yes ☐ No	
Provide the expected start and end dates of discharge(s) (month/year): October 2017 through July 2018 Indicate if the discharge is expected to occur over a duration of: ■ less than 12 months ☐ 12 months or more ☐ is an emergency discharge	
Has the operator attached a site plan in accordance with the instructions in D, above? (check one): ■ Yes ☐ No

. reatment system information

1. Indicate the type(s) of treatment that will be applied to effluent prior to discharge: (check all that apply)

☐ Adsorption/Absorption ☐ Advanced Oxidation Processes ☐ Air Stripping ■ Granulated Activated Carbon ("GAC")/Liquid Phase Carbon Adsorption
☐ Ion Exchange ☐ Precipitation/Coagulation/Flocculation ■ Separation/Filtration ☐ Other; if so, specify:

2. Provide a written description of all treatment system(s) or processes that will be applied to the effluent prior to discharge.

The dewatering and treatment system anticipated for this work includes a 20,000-gallon baffled setting fractionation tank, sediment bag filters, and two activated carbon filter vessels for remaining contaminant removal.

Identify each major treatment component (check any that apply):
■ Fractionation tanks☐ Equalization tank ☐ Oil/water separator ☐ Mechanical filter ■ Media filter
☐ Chemical feed tank ☐ Air stripping unit ■ Bag filter ☐ Other; if so, specify:

Indicate if either of the following will occur (check any that apply):
☐ Chlorination ☐ De-chlorination

3. Provide the **desi n flo capacity** in gallons per minute (gpm) of the most limiting component. Indicate the most limiting component: Pump Capactiy Is use of a flow meter feasible? (check one): ■ Yes ☐ No, if so, provide justification:	100 gpm
Provide the proposed maximum effluent flow in gpm.	100 gpm
Provide the average effluent flow in gpm.	50 gpm
If Activity Category IV applies, indicate the estimated total volume of water that will be discharged:	N/A

4. Has the operator attached a schematic of flow in accordance with the instructions in E, above? (check one): ■ Yes ☐ No

. C emical and additi e information

1. Indicate the type(s) of chemical or additive that will be applied to effluent prior to discharge or that may otherwise be present in the discharge(s): (check all that apply)

☐ Algaecides/biocides ☐ Antifoams ☐ Coagulants ☐ Corrosion/scale inhibitors ☐ Disinfectants ☐ Flocculants ☐ Neutralizing agents ☐ Oxidants ☐ Oxygen ☐ scavengers ☐ pH conditioners ☐ Bioremedial agents, including microbes ☐ Chlorine or chemicals containing chlorine ☐ Other; if so, specify:

2. Provide the following information for each chemical/additive, using attachments, if necessary:

a. Product name, chemical formula, and manufacturer of the chemical/additive;
b. Purpose or use of the chemical/additive or remedial agent;
c. Material Safety Data Sheet (MSDS) and Chemical Abstracts Service (CAS) Registry number for each chemical/additive;
d. The frequency (hourly, daily, etc.), duration (hours, days), quantity (maximum and average), and method of application for the chemical/additive;
e. Any material compatibility risks for storage and/or use including the control measures used to minimize such risks; and
f. If available, the vendor's reported aquatic toxicity (NOAEL and/or LC50 in percent for aquatic organism(s)).

3. Has the operator attached an explanation which demonstrates that the addition of such chemicals/additives may be authorized under this general permit in accordance with the instructions in F, above? (check one): ☐ Yes ☐ No; if no, has the operator attached data that demonstrates each of the 126 priority pollutants in CWA Section 307(a) and 40 CFR Part 423.15(j)(1) are non-detect in discharges with the addition of the proposed chemical/additive?
(check one): ☐ Yes ☐ No

. ndan ered pecies ct eli i ility determination

1. Indicate under which criterion the discharge(s) is eligible for coverage under this general permit:

■ **Criterion** : No endangered or threatened species or critical habitat are in proximity to the discharges or related activities or come in contact with the "action area".

☐ **Criterion** : Formal or informal consultation with the FWS under section 7 of the ESA resulted in either a no jeopardy opinion (formal consultation) or a written concurrence by FWS on a finding that the discharges and related activities are "not likely to adversely affect" listed species or critical habitat (informal consultation). Has the operator completed consultation with FWS? (check one): ☐ Yes ☐ No; if no, is consultation underway? (check one): ☐ Yes ☐ No

☐ **Criterion C**: Using the best scientific and commercial data available, the effect of the discharges and related activities on listed species and critical habitat have been evaluated. Based on those evaluations, a determination is made by EPA, or by the operator and affirmed by EPA, that the discharges and related activities will have "no effect" on any federally threatened or endangered listed species or designated critical habitat under the jurisdiction of the FWS. This determination was made by: (check one) ☐ the operator ☐ EPA ☐ Other; if so, specify:

☐ **Criterion**: A determination made by EPA is affirmed by the operator that the discharges and related activities will have "no effect" or are "not likely to adversely affect" any federally threatened or endangered listed species or critical habitat under the jurisdiction of NMFS and will not result in any take of listed species. Has the operator previously completed consultation with NMFS? (check one): ☐ Yes ☐ No

2. Has the operator attached supporting documentation of ESA eligibility in accordance with the instructions in Appendix I, and G, above? (check one): ■ Yes ☐ No

Does the supporting documentation include any written concurrence or finding provided by the Services? (check one): ☐ Yes ■ No; if yes, attach.

. ational istoric reser ation ct eli i ility determination

1. Indicate under which criterion the discharge(s) is eligible for coverage under this general permit:

■ **Criterion** : No historic properties are present. The discharges and discharge-related activities (e.g., BMPs) do not have the potential to cause effects on historic properties.

☐ **Criterion** : Historic properties are present. Discharges and discharge related activities do not have the potential to cause effects on historic properties.

☐ **Criterion C**: Historic properties are present. The discharges and discharge-related activities have the potential to have an effect or will have an adverse effect on historic properties.

2. Has the operator attached supporting documentation of NHPA eligibility in accordance with the instructions in H, above? (check one): ■ Yes ☐ No

Does the supporting documentation include any written agreement with the State Historic Preservation Officer (SHPO), Tribal Historic Preservation Officer (TPHO), or other tribal representative that outlines measures the operator will carry out to mitigate or prevent any adverse effects on historic properties? (check one): ☐ Yes ■ No

. upplemental information

Describe any supplemental information being provided with the NOI. Include attachments if required or otherwise necessary.

Has the operator attached data, including any laboratory case narrative and chain of custody used to support the application? (check one): ■ Yes ☐ No

Has the operator attached the certification requirement for the Best Management Practices Plan (BMPP)? (check one): ■ Yes ☐ No

J. Certification requirement

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I have no personal knowledge that the information submitted is other than true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

BMPP certification statement:	A BMPP meeting the requirements of this general permit will be developed and implemented upon initiation of discharge.
Notification provided to the appropriate State, including a copy of this NOI, if required.	Check one: Yes ■ No ☐
Notification provided to the municipality in which the discharge is located, including a copy of this NOI, if requested.	Check one: Yes ■ No ☐
Notification provided to the owner of a private or municipal storm sewer system, if such system is used for site discharges, including a copy of this NOI, if requested.	Check one: Yes ☐ No ■ NA ☐
Permission obtained from the owner of a private or municipal storm sewer system, if such system is used for site discharges. If yes, attach additional conditions. If no, attach explanation and timeframe for obtaining permission.	Check one: Yes ☐ No ☐ NA ■
Notification provided to the owner/operator of the area associated with activities covered by an additional discharge permit(s). Additional discharge permit is (check one): ☐ RGP ☐ DGP ☐ CGP ☐ MSGP ☐ Individual NPDES permit ☐ Other; if so, specify:	Check one: Yes ☐ No ■ NA ☐

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

September 22, 2017: This is a preliminary report.

Sample Receipt

A Trip Blank was received in the laboratory, but not listed on the Chain of Custody, and was not analyzed.

Total Metals

The WG1044539-3 MS recovery, performed on L1733722-02, is outside the acceptance criteria for hardness (74%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Kelly Stenstrom

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: Data Usability Report

Project Name:	CERTAINTEED RGP	**Lab Number:**	L1733722
Project Number:	3330006I	**Report Date:**	09/22/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Dilution Factor Calculation Method

In accordance with Appendix V of the RGP for Massachusetts Dilution Factor Calculation:

Dilution Factor = DF

$$DF = \frac{(QR + QP)}{QP}$$

QR = 7Q10 in MGD
QP = Discharge Flow in MGD

CertainTeed Roofing Dilution Factor Calculation

QR = 1.62 cfs = 1.05 MGD Source: USGS StreamStats
QP = 100 gpm = 0.144 MGD Source: Site Design Discharge Flow

$$DF = \frac{(1.05 + 0.144)}{0.144} = \mathbf{8.29}$$

Approved by State on 9/27/2017

Notes:

Freshwater: Q_R equal to the 7Q10; enter alternate Q_R if approved by the State; enter 0 if no dilution factor
Saltwater (estuarine and marine): enter Q_R if approved by the State; enter 0 if no entry
Discharge flow is equal to the design flow or 1 MGD, whichever is less
Only if approved by State as the entry for Q_R; leave 0 if no entry

Saltwater (estuarine and marine): only if approved by the State
Leave 0 if no entry

Freshwater only

pH, temperature, and ammonia required for all discharges
Hardness required for freshwater
Salinity required for saltwater (estuarine and marine)
Metals required for all discharges if present and if dilution factor is > 1
Enter 0 if non-detect or testing not required

if >1 sample, enter maximum
if >10 samples, may enter 95th percentile
Enter 0 if non-detect or testing not required

StreamStats CertainTeed Norwood near detention basin.pdf

Hi Russell,
Using the attached StreamStats report for a discharge near the detention basin on the Neponset:
7Q10 = 1.62 cfs = 1.05 MGD
and a design flow of 100 gpm = 0.144 MGD
DF = (1.05+0.144)/0.144 = 8.29

You can go ahead and use 8.29 for a dilution factor or if you disagree with the location I chose, you can calculate a 7Q10 at any location on the Neponset near 1077 Pleasant St. (doesn't have to be at a stream gauge) using: https://streamstats.usgs.gov/ss/

There isn't a phosphorus TMDL for the Neponset and so a phosphorus limit will not be needed. EPA will determine the other necessary limits in the authorization.

Cathy

Subject: Request for approval of Dilution Factor, RGP NOI application

Catherine,

CertainTeed corporation of 1077 Pleasant Street, Norwood , MA is applying for an RGP for discharge of treated effluent into the Neponset River located at that address. I understand we need to contact you prior to completing the NOI requirements for the Remediation General Permit (RGP), to confirm the critical low flow (7Q10) of the receiving water, dilution factor (DF), other appropriate hydrologic conditions, or to confirm site-specific limiting factors, including additional water quality-based effluent limitations (WQBELs). We have determined the 7Q10 for the USGS Station Number 01105000, which is the closest station to the proposed discharge location to be 4.5 CFS by StreamStats as indicated on the attachment. Our proposed maximum design flowrate is 100 gallons per minute (0.144 CFS) and thus using the Dilution Factor Calculation:

B. Dilution Factor
Calculated as follows:
Df = QR + QP
QP
QR = 7Q10 in MGD
QP = Discharge flow, in MGD

Qs = 7Q10 = 7 day 10 year Low Flow = 4.5 cfs = 2.908 MGD

Qd = Design Discharge Flow = 100 gpm = 0.144 MGD

DF = Dilution Factor = (Qs + Qd)/ Qd = (2.908 + 0.144)/0.144 = **21.2**

We have calculated a Dilution Factor of 21.2

Please confirm our calculations or let me know if you need more information. Thank you.

Yours sincerely
Russell Parkman, P.E.

Notes:
1. MCP Method 3 Upper Concentration Limits in Groundwater (UCLW) taken from 2014 revised MCP at 310 CMR 40.0996(7): TABLE 6 ++.
2. MCP Method 1 Groundwater Standards taken from 2014 revised MCP at 310 CMR 40.0974(2): TABLE 1++.
3. 75 U indicates analyte not detected above
4. "NE" indicates no standard available for analyte.
5. **Bold** values indicate detected analyte.
6. - indicates sample not analyzed for that parameter.
7. Regulatory exceedances:

Reporting Limit exceeded Applicable Regulatory Standard

- GZ-101 — MONITORING WELL INSTALLED BY GEO-LOGIC ASSOCIATES IN NOVEMBER 2012. OBSERVED AND LOGGED BY GZA PERSONNEL.
- GZ-104 — SOIL BORING PERFORMED BY GEO-LOGIC ASSOCIATES IN NOVEMBER 2012. OBSERVED AND LOGGED BY GZA PERSONNEL.
- SS-1 — SURFICIAL SOIL SAMPLE (1.5 TO 2.0 FEET BELOW GROUND SURFACE) OBTAINED BY GZA USING HAND AUGER 10-13-1995.
- SED-1 — HAND AUGERED STREAM BANK SEDIMENT SAMPLE OBTAINED BY GZA BETWEEN 09-30-1995 AND 10-09-1995.
- GZ-(95)-1 OW — BORING PERFORMED BY GZA DRILLING, INC. BETWEEN 08-25-1995 AND 08-31-1995. INDICATES OBSERVATION WELL INSTALLED.
- GZA-(94)-1 OW
- APPROXIMATE LOCATION OF CURRENT OIL CONTAINMENT BOOM SYSTEM

NOTES

1. THE BASE MAP WAS DEVELOPED FROM A PLAN PROVIDED BY BIRD, INC. ROOFING DIVISION ENTITLED "PHASE II WELL LOCATION", DATED: 08-16-1995, ORIGINAL SCALE: 1"=60', DRAWING NO.: 95-40481
2. SITE PROPERTY LINE INFORMATION OBTAINED FROM PLAN PREPARED BY JOHN L. ANDERSON & ASSOCIATES ENTITLED "TITLE INSURANCE PLAN OF LAND IN NORWOOD & WALPOLE, MASS", DATED 11-18-1994, ORIGINAL SCALE: 1"=80'.
3. THE LOCATIONS OF ENVIRON's BORINGS, MONITORING WELLS AND SAMPLING LOCATIONS AND THE LOCATIONS OF GZA'S MONITORING WELLS WERE SURVEYED BY DEPRETE ENGINEERING, A MASSACHUSETTS-LICENSED LAND SURVEYOR, TO THE NEAREST 1/100th OF A FOOT ON 05-13-2014.
4. SEDIMENT DATA INCLUDES SEDIMENT SAMPLES COLLECTED BY GZA IN SEPTEMBER 1995 FOR TOTAL PETROLEUM HYDROCARBON (TPH) ANALYSIS (SED-1, 2, 5) IN MAY AND OCTOBER 2013 FOR EPH/VPH ANALYSES (SED-101, 102, 103, 104, AND 105).

LEGEND

- ENV-1 — MONITORING WELL INSTALLED BY NEW ENGLAND GEOTECH IN APRIL 2014, OBSERVED AND LOGGED BY ENVIRON PERSONNEL.
- ENV-3 — SOIL BORING PERFORMER BY NEW ENGLAND GEOTECH IN APRIL 2014, OBSERVED AND LOGGED BY ENVIRON PERSONNEL.
- ENV-BANK-1 — SURFICIAL BANK SOIL SAMPLE (0-2' BGS) OBTAINED BY ENVIRON USING HANG AUGER ON APRIL 30, 2014.
- ENV-SS-1 — SURFICIAL SOIL SAMPLE (0-2' BGS) OBTAINED BY ENVIRON USING HAND AUGER ON APRIL 30, 2014.
- SED-104 — SEDIMENT SAMPLE (0-0.5 bgs) OBTAINED BY GZA ON 10-11-2013.
- BANK-2 — SURFICIAL BANK SOIL SAMPLE (0-0.5 bgs) OBTAINED BY GZA ON 10-11-2013.
- SED-101 — SEDIMENT SAMPLE (0-0.5 bgs) OBTAINED BY GZA ON 05-08-2013.
- BANK-1 — SURFICIAL BANK SOIL SAMPLE (0-0.5 bgs) OBTAINED BY GZA ON 05-08-2013.
- GZ-101 — MONITORING WELL INSTALLED BY GEO-LOGIC ASSOCIATES IN NOVEMBER 2012. OBSERVED AND LOGGED BY GZA PERSONNEL.
- GZ-104 — SOIL BORING PERFORMED BY GEO-LOGIC ASSOCIATES IN NOVEMBER 2012. OBSERVED AND LOGGED BY GZA PERSONNEL.
- SS-1 — SURFICIAL SOIL SAMPLE (1.5 TO 2.0 FEET BELOW GROUND SURFACE) OBTAINED BY GZA USING HAND AUGER 10-13-1995.
- SED-1 — HAND AUGERED STREAM BANK SEDIMENT SAMPLE OBTAINED BY GZA BETWEEN 09-30-1995 AND 10-09-1995.
- GZ-(95)-1 OW — BORING PERFORMED BY GZA DRILLING, INC. BETWEEN 08-25-1995 AND 08-31-1995. INDICATES OBSERVATION WELL INSTALLED.
- APPROXIMATE LOCATION OF CURRENT OIL CONTAINMENT BOOM SYSTEM

NOTES

1. THE BASE MAP WAS DEVELOPED FROM A PLAN PROVIDED BY BIRD, INC. ROOFING DIVISION ENTITLED "PHASE II WELL LOCATION", DATED: 08-16-1995, ORIGINAL SCALE: 1"=60', DRAWING NO.: 95-40481
2. SITE PROPERTY LINE INFORMATION OBTAINED FROM PLAN PREPARED BY JOHN L. ANDERSON & ASSOCIATES ENTITLED "TITLE INSURANCE PLAN OF LAND IN NORWOOD & WALPOLE, MASS", DATED 11-18-1994, ORIGINAL SCALE: 1"=80'.
3. THE LOCATIONS OF ENVIRON's BORINGS, MONITORING WELLS AND SAMPLING LOCATIONS AND THE LOCATIONS OF GZA'S MONITORING WELLS WERE SURVEYED BY DEPRETE ENGINEERING, A MASSACHUSETTS-LICENSED LAND SURVEYOR, TO THE NEAREST 1/100th OF A FOOT ON 05-13-2014.
4. SEDIMENT DATA INCLUDES SEDIMENT SAMPLES COLLECTED BY GZA IN SEPTEMBER 1995 FOR TOTAL PETROLEUM HYDROCARBON (TPH) ANALYSIS (SED-1, 2, 5) IN MAY AND OCTOBER 2013 FOR EPH/VPH ANALYSES (SED-101, 102, 103, 104, AND 105).

Notes:
1. Anyalytes detected over laboratory reporting limits are shown.
2. All concentrations are presented in miligrams per kiligram [mg/kg].
3. Analytes detected over laboratory reporting limits are presented in **BOLD**.

Figure 4 depicts the various river zones and sampling locations. Zones 1, 2, and 3 are located upstream of the Disposal Site, Zone 4 and part of Zone 5 run along the Disposal Site, and Zone 6 and part of Zone 5 are located downstream of the Disposal Site. Zone 6 is downstream of the CertainTeed property. Zone 1 starts at the upstream edge of where the river enters the CertainTeed property. The 6 samples collected upstream of Zone 1 represent local conditions, which will be discussed in the sections on Sediment Chemistry and Ecological Screening. Sampling locations are depicted on Figure 4 with different shapes and colors. The shapes represent the sampling program under which the samples were collected, the colors represent the results of the sheen evaluation performed by field staff, as discussed in the next section.

RE: PRE-CONSTRUCTION NOTICE
GENERAL PERMIT 17
BIRD INCORPORATED D.B.A. CERTAINTEED ROOFING
RELEASE TRACKING NUMBER (RTN) 4-24105
NORWOOD, MA

Dear Sir/Madam:

Ramboll Environ
1760 Market Street
Suite 1000
Philadelphia, PA 19103
USA

T +1 215 523 5600
F +1 215 496 0164
www.ramboll-environ.com

On behalf of the project applicant and owner, Bird Incorporated d.b.a. CertainTeed Roofing (CertainTeed), please find enclosed a Pre-Construction Notice (PCN) for a General Permit 17 for implementing the Phase IV Implementation Plan under the Massachusetts Contingency Plan (MCP) to remediate Light Non-Aqueous Liquid (LNAPL) associated with a historic release on the site located in Norwood, Norfolk County, Massachusetts. This PCN includes the following:

- Completed ENG4345 Form
- Vicinity plan
- Project drawings
- Compliance statement demonstrating project compliance with the general conditions for Massachusetts General Permits as well as the supplemental General Conditions provided in Section IX of the March 2015 General Permit guidance. This includes a copy of the notification sent to Massachusetts Historical Commission.

Note that on June 7, 2017 the applicant is submitted a Notice of Intent (NOI) to the Norwood Conservation Commission. When received, the Final Order of Conditions will be provided to USACE New England District. Concurrent with this PCN, the applicant is submitting an application to MassDEP for a Combined 401 Water Quality Certificate/Chapter 91 Permit. When received, the combined 401 WQC/Chapter 91 Permit will be provided to USACE New England District.

Should you have any questions or require any additional information, please do not hesitate to contact me at lgeorge@ramboll.com or 215-523-5603.

Sincerely,

Laura George
Principal Consultant

COMPLETED ENG4345 FORM

U.S. ARMY CORPS OF ENGINEERS

APPLICATION FOR DEPARTMENT OF THE ARMY PERMIT

33 CFR 325. The proponent agency is CECW-CO-R.

Form Approved - OMB No. 0710-0003 Expires: 30-SEPTEMBER-2015

Public reporting for this collection of information is estimated to average 11 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of the collection of information, including suggestions for reducing this burden, to Department of Defense, Washington Headquarters, Executive Services and Communications Directorate, Information Management Division and to the Office of Management and Budget, Paperwork Reduction Project (0710-0003). Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. Please DO NOT RETURN your form to either of those addresses. Completed applications must be submitted to the District Engineer having jurisdiction over the location of the proposed activity.

PRIVACY ACT STATEMENT

Authorities: Rivers and Harbors Act, Section 10, 33 USC 403; Clean Water Act, Section 404, 33 USC 1344; Marine Protection, Research, and Sanctuaries Act, Section 103, 33 USC 1413; Regulatory Programs of the Corps of Engineers; Final Rule 33 CFR 320-332. Principal Purpose: Information provided on this form will be used in evaluating the application for a permit. Routine Uses: This information may be shared with the Department of Justice and other federal, state, and local government agencies, and the public and may be made available as part of a public notice as required by Federal law. Submission of requested information is voluntary, however, if information is not provided the permit application cannot be evaluated nor can a permit be issued. One set of original drawings or good reproducible copies which show the location and character of the proposed activity must be attached to this application (see sample drawings and/or instructions) and be submitted to the District Engineer having jurisdiction over the location of the proposed activity. An application that is not completed in full will be returned.

SIGNATURE OF APPLICANT — DATE: 6-12-17

NAME, LOCATION, AND DESCRIPTION OF PROJECT OR ACTIVITY

12. PROJECT NAME OR TITLE (see instructions)

CertainTeed

13. NAME OF WATERBODY, IF KNOWN (if applicable)	14. PROJECT STREET ADDRESS (if applicable)
Neponset River	Address 1077 Pleasant Street
15. LOCATION OF PROJECT Latitude: °N 42.168861 Longitude: °W 71.206679	City - Norwood State- PA Zip- 02062

16. OTHER LOCATION DESCRIPTIONS, IF KNOWN (see instructions)

State Tax Parcel ID #10-1-4 Municipality Norwood and Walpole

Section - Township - Range -

17. DIRECTIONS TO THE SITE

Heading south along Washington Street, from the town center of Norwood, make a left onto Dean street (0.9 mi). Then travel east down Dean Street and turn right onto Pleasant Street (0.3 mi). Travel 1.0 mi down Pleasant Street and the CertainTeed Roofing facility will be on the right.

18. Nature of Activity (Description of project, include all features)

The proposed scope of work will include the construction of a remedy that consists of 1) an upland component designed to eliminate visible light non-aqueous phase liquid (LNAPL) from releasing into the Neponset River and 2) a river component designed to remove and isolate LNAPL impacted sediments from the aquatic environment. Details of the proposed remedy can be viewed in the attached documents.

19. Project Purpose (Describe the reason or purpose of the project, see instructions)

The purpose of this project is to implement a remedial design to address and eliminate visible light non-aqueous phase liquid (LNAPL) from releasing into the Neponset River and to remove and isolate LNAPL impacted sediments from the aquatic environment. Details of the proposed remedy can be viewed in the attached documents.

USE BLOCKS 20-23 IF DREDGED AND/OR FILL MATERIAL IS TO BE DISCHARGED

20. Reason(s) for Discharge

Approximately 910 cubic feet of LNAPL impacted sediments will be excavated from the Neponset River. Upon the full removal of the impacted materials, the excavation will then be backfilled with approximately 910 cubic feet certified clean fill in order to restore the river to prior conditions. This area will be fully restored resulting in 0 net cut or fill.

21. 910 cubic yards of Oleophilic Clay, FS-1 Filter Stone, and Class 1 RIP-RAP

21. Type(s) of Material Being Discharged and the Amount of Each Type in Cubic Yards:

Type Amount in Cubic Yards	Type Amount in Cubic Yards	Type Amount in Cubic Yards
See above comment for cubic yardage		

22. Surface Area in Acres of Wetlands or Other Waters Filled (see instructions)

Acres N/A

or

Linear Feet N/A

23. Description of Avoidance, Minimization, and Compensation (see instructions)

As part of Ramboll Environ's Phase III Remedial Action Plan (Submitted to the MassDEP in February 2017), several remedial alternatives were identified and compared to one another based on effectiveness of treatment and on the amount of impact that would be generated. After comparing the different remedies, detailed in the Phase III, for these two primary attributes Upland Alternative 5 (LNAPL absorption barrier and River Alternative 1 (Excavation and Off-site disposal) were selected due to their likelihood that they would have the highest probability of effectiveness and would produce the least amount of impact to the Neponset River, a Water of the U.S.

24. Is Any Portion of the Work Already Complete? ☐ Yes ☒ No IF YES, DESCRIBE THE COMPLETED WORK

25. Addresses of Adjoining Property Owners, Lessees, Etc., Whose Property Adjoins the Waterbody (if more than can be entered here, please attach a supplemental list).

a. Address- Please see attached the Abutters List for adjacent properties

SPECIFICATIONS FOR SILT FENCING

SILT FENCE DETAIL
N.T.S.

SPECIFICATIONS FOR STRAW WATTLES

SECTION

NOTES:

1. ALL MATERIALS TO MEET MANUFACTURERS SPECIFICATIONS.
2. MAINTAIN IN A FUNCTIONAL CONDITION AT ALL TIMES. THE WATTLES SHALL BE ROUTINELY INSPECTED BY THE CONTRACTOR AND REPLACED AS NECESSARY.
3. AT A MINIMUM, REMOVE SEDIMENTS COLLECTED AT THE BASE WHEN THEY REACH 1/3 THE EXPOSED HEIGHT.

12 INCH MICROBIAL FILTERMITT™
(OR ENGINEER APPROVED EQUIVALENT)
N.T.S.

SPECIFICATIONS FOR DUST CONTROL

Methods

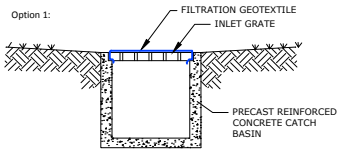

1. **Vegetative Cover** - For disturbed areas not subject to traffic, vegetation provides the most practical method of dust control.
2. **Mulch** (including Gravel Mulch) - When properly applied, mulch offers a fast, effective means of controlling dust.
3. **Spray-on Adhesive** - Latex emulsions or resin in water can be sprayed onto mineral soil to prevent particles from blowing away.
4. **Calcium Chloride** - Calcium chloride may be applied by mechanical spreader as loose, dry granules or flakes at a rate that keeps the surface moist but not so high as to cause water pollution or plant damage.
5. **Sprinkling** - The site may be sprinkled until the surface is wet. Sprinkling is especially effective for dust control on haul roads and other traffic routes.
6. **Stone** - Used to stabilize construction roads; can also be effective for dust control.
7. **Barriers** - A board fence, wind fence, sediment fence, or similar barrier can control air currents and blowing soil. All of these fences are normally constructed of wood and they prevent erosion by obstructing the wind near the ground and preventing the soil from blowing offsite. A wind barrier generally protects soil downward for a distance of 10 times the height of the barrier. Perennial grass and stands of existing trees may also serve as wind barriers.

Maintenance

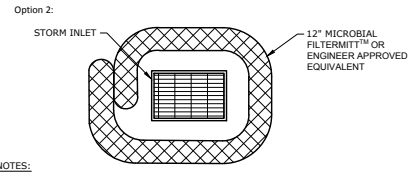

The Contractor shall respray area as necessary to keep dust to a minimum.

SPECIFICATIONS FOR INLET PROTECTION

1. Grates and spaces of all inlets shall be secured to prevent seepage of sediment-laden water.
2. All inlet protection measures shall include sediment sumps of 1 to 2 feet in depth, with 2H:1V side slopes.
3. The inlet protection device shall be constructed so that any ponding resulting from the installation will not cause damage to adjacent areas or structures.
4. The device shall be constructed so that clean-out and disposal of trapped sediment and debris can be accomplished with little interference to construction activities.
5. The drainage area normally shall be no more than one acre.
6. Runoff from 10-year storm shall enter storm drain without bypass flow.

CATCH BASIN INLET PROTECTION DETAIL
N.T.S

NOTES:

1. ALL MATERIALS TO MEET MANUFACTURERS SPECIFICATIONS.
2. MAINTAIN IN A FUNCTIONAL CONDITION AT ALL TIMES. THE WATTLES SHALL BE ROUTINELY INSPECTED BY THE CONTRACTOR AND REPLACED AS NECESSARY.
3. AT A MINIMUM, REMOVE SEDIMENTS COLLECTED AT THE BASE WHEN THEY REACH 1/3 THE EXPOSED HEIGHT.

12 INCH MICROBIAL FILTERMITT™
(OR ENGINEER APPROVED EQUIVALENT)
FOR INLET PROTECTION
N.T.S.

SPECIFICATIONS FOR LAND GRADING AND STABILIZATION

Design Recommendations

1. Cut or fill slopes which are to be vegetated shall not be steeper than 2H:1V. If a slope is to be mowed, it shall be 3H:1V or flatter. Slopes of materials not to be vegetated shall be at the safe angle of repose for the materials encountered.
2. Provisions shall be made to safely conduct surface water to storm drains or suitable natural water courses and to prevent surface runoff from damaging cut faces and fill slopes.
3. Terraces or diversions shall be provided whenever the height of the cut or fill exceeds 20 feet. The "benches" shall divide the slope face as equally as possible and shall convey the water into stable outlets. Benches shall be kept free of sediment during all phases of development. Seeps or springs encountered during construction shall be controlled by subsurface drains or other appropriate methods.
4. Subsurface drainage shall be provided in areas having a high water table, to intercept seepage that would affect slope stability, building foundations, or create undesirable wetness. Excavations shall not be made so close to property lines as to endanger adjoining property without supporting and protecting such property from erosion, sliding, settling, or cracking.
5. No fill shall be placed where it will slide or wash onto the premises of another or be placed adjacent to the bank of a channel so as to create bank failure or reduce the natural capacity of the stream.
6. Fills shall consist of material from cut areas, borrow pits, or other approved sources.
7. Protective slopes around buildings shall be planned to slope away from foundations and water supply wells to lower areas, drainage channels, or waterways. The minimum horizontal length shall be 10 feet, except where restricted by property lines.
8. The minimum vertical fall of protective slopes shall be 6 inches, except that the vertical fall at the high point at the upper end of a swale may be reduced to 3 inches, if a long slope toward a building or from a nearby high bank will not exist.
9. Minimum gradients shall be 1/16 inch per foot (1/2 percent) for concrete or other impervious surfaces and ¼ inch per foot (2 percent) for pervious surfaces.
10. Maximum gradient of protective slopes shall be 2 ½ inches per foot (21 percent) for a minimum of 4 feet away from all building walls, except where restricted by property lines.
11. All graded areas shall be permanently stabilized immediately following final grading.

Construction Recommendations

1. Areas to be graded shall be cleared and grubbed of all timber, logs, brush, rubbish, and vegetable matter that will interfere with the grading operation. Topsoil shall be stripped and stockpiled for use on critical disturbed areas for establishment of vegetation. Cut slopes to be topsoiled shall be thoroughly scarified to a minimum depth of 3 inches prior to placement of topsoil.
2. Fill materials shall be generally free of brush, rubbish, rocks, and stumps. Frozen materials or soft and easily compressible materials shall not be used in fills intended to support buildings, parking lots, roads, conduits, or other structures.
3. Earth fill intended to support structural measures shall be compacted to the minimum density indicated in the construction technical specifications. Compaction of other fills shall be to the density required to control sloughing, erosion or excessive moisture content.
4. Maximum thickness of fill layers prior to compaction shall not exceed 9 inches.
5. Grading shall generally be done to a tolerance of within 0.2 foot of planned grades and elevations. Allowances may be made for topsoil, paving, or other surface installations.
7. All disturbed areas shall be free draining, left with a neat and finished appearance, and shall be protected from erosion.

Maintenance

1. All slopes shall be checked periodically to ensure that vegetation is in good condition. Any rills or damage from erosion and animal burrowing shall be repaired immediately to avoid further damage.
2. If seeps develop on the slopes, the area shall be evaluated to determine if the seep will cause an unstable condition. Subsurface drains or a gravel mulch may be required to solve seep problems.
3. Diversions, berms, and waterways shall be checked to see that they are functioning properly. Problems found during the inspections shall be repaired promptly.
4. Areas requiring revegetation shall be repaired immediately.
5. Slopes shall be limed and fertilized as necessary to keep vegetation healthy.
6. Control undesirable vegetation such as weeds and woody growth to avoid bank stability problems in the future.

SPECIFICATIONS FOR PERMANENT SEEDING

1. Permanent seeding and planting is appropriate for any graded or cleared area where long-lived plant cover is needed to stabilize the soil. This practice is applicable for areas which will not be brought to final grade for a year or more.
2. Some areas where permanent seeding is especially important are filter strips, buffer areas, vegetated swales, steep slopes, and stream banks.
3. This practice is effective on areas where soils are unstable because of their texture or structure, high water table, winds, or steep slope.

Planning considerations

1. Selection of the right plant materials for the site, good seedbed preparation, timing, and conscientious maintenance are important.
2. Whenever possible, native species of plants shall be used for landscaping. These plants are already adapted to the locale and survivability shall be higher than with "introduced" species.
3. Native species are also less likely to require irrigation, which can be a large maintenance burden and is neither cost-effective nor ecologically sound.
4. If non-native plant species are used, they shall be tolerant of a large range of growing conditions, as low-maintenance as possible, and not invasive.
5. Consider the microclimate within the development area. Low areas may be frost pockets and require hardier vegetation since cold air tends to sink and flow towards low spots. South-facing slopes may be more difficult to re-vegetate because they tend to be sunnier and drier.
6. Divert as much surface water as possible from the area to be planted.
7. Remove seepage water that would continue to have adverse effects on soil stability or the protecting vegetation. Subsurface drainage or other engineering practices may be needed. In this situation, a permit may be needed from the local Conservation Commission; check ahead of time to avoid construction delays.
8. Provide protection from equipment, trampling and other destructive agents.
9. Vegetation cannot be expected to supply an erosion control cover and prevent slippage on a soil that is not stable due to its texture, structure, water movement, or excessive slope.
10. Install needed surface runoff control measures such as gradient terraces, berms, dikes, level spreaders, waterways, and sediment basins prior to seeding or planting.

Seedbed Preparation

1. If infertile or coarse-textured subsoil will be exposed during land shaping, it is best to stockpile topsoil and respread it over the finished slope at a minimum 2- to 6-inch depth and roll it to provide a firm seedbed. If construction fill operations have left soil exposed with a loose, rough, or irregular surface, smooth with blade and roll.
2. Loosen the soil to a depth of 3-5 inches with suitable agricultural or construction equipment.
3. Areas not to receive top soil shall be treated to firm the seedbed after incorporation of the lime and fertilizer so that it is depressed no more than ½ - 1 inch when stepped on with a shoe. Areas to receive topsoil shall not be firmed until after topsoiling and lime and fertilizer is applied and incorporated, at which time it shall be treated to firm the seedbed as described above. This can be done by rolling or cultipacking.

Cool Season Grasses

Cool Season Grasses grow rapidly in the cool weather of spring and fall, and set seed in June and July. Cool season grasses become dormant when summer temperatures persist above 85 degrees Fahrenheit and moisture is scarce.

Lime and Fertilizer

Apply lime and fertilizer according to soil test and current extension service recommendations.

Seeding Dates

Seeding operations shall be performed within one of the following periods:

- April 1 - May 31,
- August 1 - September 10,
- November 1 - December 15 as a dormant seeding (seeding rates shall be increased by 50% for dormant seedings).

Seeding Methods

Seeding shall be performed by one of the following methods. Seed shall be planted to a depth of ¼ to ½ inches.

- Drill seedings,
- Broadcast and rolled, cultipacked or tracked with a small track piece of construction equipment,
- Hydroseeding, with subsequent tracking.

Mulch

Mulch the seedings with straw applied at the rate of ½ tons per acre.
Anchor the mulch with erosion control netting or fabric on sloping areas.

Warm Season Grasses

Warm Season Grasses begin growth slowly in the spring, grow rapidly in the hot summer months and set seed in the fall. Many warm season grasses are sensitive to frost in the fall, and the top growth may die back.
Growth begins from the plant base the following spring.

Lime and Fertilizer

Lime to attain a pH of at least 5.5. Apply a 0-10-10 analysis fertilizer at the rate of 600 lbs./acre. Incorporate both into the top 2-3 inches of soil. (30 lbs. of slow release nitrogen shall be applied after emergence of grass in the late spring.)

Seeding Dates

Seeding operations shall be performed as an early spring seeding (April 1-May 15) with the use of cold treated seed. A late fall early winter dormant seeding (November 1 - December 15) can also be made, however the seeding rate will need to be increased by 50%.

Seeding Methods

Seeding shall be performed by one of the following methods:

- Drill seedings (de-awned or de-bearded seed shall be used unless the drill is equipped with special features to accept awned seed).
- Broadcast seeding with subsequent rolling, cultipacking or tracking the seeding with small track construction equipment. Tracking shall be oriented up and down the slope.
- Hydroseeding with subsequent tracking. If wood fiber mulch is used, it shall be applied as a separate operation after seeding and tracking to assure good seed to soil contact.

Mulch

Mulch the seedings with straw applied at the rate of ½ tons per acre.
Anchor the mulch with erosion control netting or fabric on sloping areas.

SPECIFICATIONS FOR EROSION CONTROL/RESTORATION MIX FOR DRY SITES

- The New England Erosion Control/Restoration Mix for Dry Sites provides an appropriate selection of native and naturalized grasses to ensure that dry and recently disturbed sites will be quickly revegetated and the soil surface stabilized. It is an appropriate seed mix for road cuts, pipelines, steeper slopes, and areas requiring quick cover during the ecological restoration process. The mix may be applied by hydro-seeding, by mechanical spreader, or on small sites it can be spread by hand. Lightly rake, or roll to ensure proper soil-seed contact. Best results are obtained with a Spring or late Summer seeding. Late Spring through Mid-Summer seeding will benefit from a light mulching of weed-free straw to conserve moisture. If conditions are drier than usual, watering will be required. Fertilization is not required unless the soils are particularly infertile. Preparation of a clean weed free seed bed is necessary for optimal results.

Application Rate :
35 lb / acre 1250 sq ft / lb

Species :
Creeping Red Fescue, (Festuca rubra), Canada Wild Rye, (Elymus Canadensis), Annual Ryegrass, (Lolium multiflorum), Perrenial Ryegrass, (Lolium perenne), Little Bluestem, (Schizachyrium scoparium), Indian Grass, (Sorghastrum nutans), Rough Bentgrass/Tickle-grass, (Agrostis perennans).

Maintenance

- Inspect seeded areas for failure and make necessary repairs and reseed immediately. Conduct or follow-up survey after one year and replace failed plants where necessary.
- If vegetative cover is inadequate to prevent rill erosion, overseed and fertilize in accordance with soil test results.
- If a stand has less than 40% cover, reevaluate choice of plant materials and quantities of lime and fertilizer. Re-establish the stand following seedbed preparation and seeding recommendations, omitting lime and fertilizer in the absence of soil test results. If the season prevents resowing, mulch or jute netting is an effective temporary cover.
- Seeded areas shall be fertilized during the second growing season.
- Lime and fertilize thereafter at periodic intervals, as needed.

SPECIFICATIONS FOR TEMPORARY SEEDING

Temporary seeding is needed to temporarily stabilize areas that will not be brought to final grade for a period of more than 30 working days and to stabilize disturbed areas before final grading or in a season not suitable for permanent seeding. Temporary seedings provide protective cover for less than one year. Areas shall be reseeded annually or planted with perennial vegetation.

Where Practice Applies

1. On any cleared, unvegetated, or sparsely vegetated soil surface where vegetative cover is needed for less than one year. Applications of this practice include diversions, dams, temporary sediment basins, temporary road banks, and topsoil stockpiles.
2. Where permanent structures are to be installed or extensive regrading of the area will occur prior to the establishment of permanent vegetation.
3. Areas which will not be subjected to heavy wear by construction traffic.
4. Areas sloping up to 10% for 100 feet or less, where temporary seeding is the only practice used.

Planting Procedures

Time of Planting

Planting shall preferably be done between April 1 and June 30, and September 1 through September 30. If planting is done in the months of July and August, irrigation may be required. If planting is done between October 1 and March 31, mulching shall be applied immediately after planting. If seeding is done during the summer months, irrigation of some sort will probably be necessary.

Site Preparation

Before seeding, install needed surface runoff control measures such as gradient terraces, interceptor dike/swales, level spreaders, and sediment basins.

Seedbed Preparation

1. The seedbed shall be firm with a fairly fine surface.
2. Perform all cultural operations across or at right angles to the slope.
3. See **Topsoiling** for more information on seedbed preparation. A minimum of 2 to 4 inches of tilled topsoil is required.

Liming and Fertilization

1. Apply uniformly 2 tons of ground limestone per acre (100 lbs. per 1,000 Sq. Ft.) or according to soil test.
2. Apply uniformly 10-10-10 analysis fertilizer at the rate of 400 lbs. per acre (14 lbs. per 1,000 Sq. Ft.) or as indicated by soil test. Forty percent of the nitrogen shall be in organic form.
3. Work in lime and fertilizer to a depth of 4 inches using any suitable equipment.

Seeding

1. Select adapted species from the accompanying table.
2. Apply seed uniformly according to the rate indicated in the table by broadcasting, drilling or hydraulic application.
3. Cover seeds with suitable equipment as follows:
   - Rye grass ¼ inch
   - Millet ½ to ¾ inch
   - Oats 1 to 1-1/2 inches
   - Winter rye 1 to 1-1/2 inches.

APPROVED BY: JPV	PROJECT: 3340006E	

Mulch

Use an effective mulch, such as clean grain straw; tacked and/or tied down with netting to protect seedbed and encourage plant growth.

Common Trouble Points

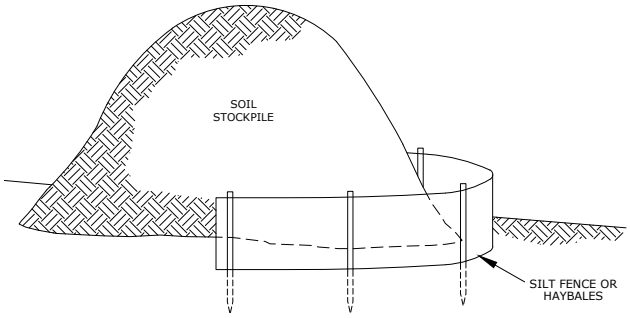

1. Lime and fertilizer not incorporated to at least 4 inches. May be lost to runoff or remain concentrated near the surface where they may inhibit germination.
2. Mulch rate inadequate or straw mulch not tacked down. Results in poor germination or failure, and erosion damage. Repair damaged areas, reseed and mulch.
3. Annual ryegrass used for temporary seeding. Ryegrass reseeds itself and makes it difficult to establish a good cover of permanent vegetation.
4. Seed not broadcast evenly or rate too low. Results in patchy growth and erosion.

Maintenance

1. Inspect within 6 weeks of planting to see if stands are adequate. Check for damage after heavy rains. Stands shall be uniform and dense.
2. Fertilize, reseed, and mulch damaged and sparse areas immediately. Tack or tie down mulch as necessary.
3. Seeds shall be supplied with adequate moisture. Furnish water as needed, especially in abnormally hot or dry weather or on adverse sites.
4. Water application rates shall be controlled to prevent runoff.

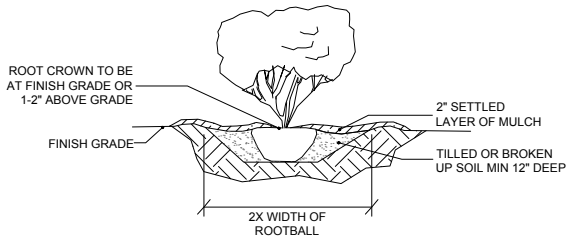

Seedings for Temporary Cover			
Species	Seeding Rates (lbs/sq ft)		Recommended Seeding Dates
	1000 sq ft	Acre	
Annual Ryegrass	1	40	April 1 to June 1
			August 15 to September 15
Foxtail Millet	0.7	30	May 1 to June 39
Oats	2	80	April 1 to July 1
			August 15 to September 15
Winter Rye	3	120	August 15 to October 15

*"Hydro-seeding" applications with appropriate seed-mulch-fertilizer mixtures may also be used.

NOTES: 1. STOCKPILE HEIGHT MUST NOT EXCEED 35 FT.
2. STOCKPILE SLOPE MUST BE 2:1 OR FLATTER.
3. FOR POTENTIALLY CONTAMINATED SOIL, TWO LAYERS OF 8 MIL POLY SHEETING SHALL BE PLACED BENEATH AND OVER EACH SOIL STOCKPILE.

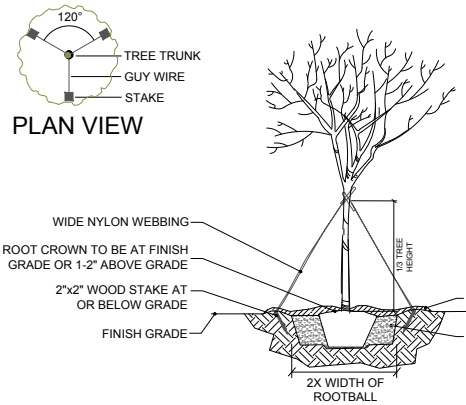

TYPICAL SOIL STOCKPILE
N.T.S.

1. DIG PLANTING HOLE AT LEAST 2X THE WIDTH OF THE ROOT BALL OR CONTAINER.
2. SCARIFY SUBGRADE AND SIDES OF PLANTING HOLE WHEN PLANTING IN CLAY SOIL.
3. SET THE TOP OF THE ROOT BALL LEVEL WITH THE SOIL SURFACE, OR 1-2" ABOVE IF THE SOIL IS PRONE TO SETTLING.
4. SHRUBS FROM NURSERY MUST BE GROWN FROM 1-2 GALLON CONTAINERS AND 3-4' TALL DURING TRANSPLANTING
5. GENTLY SLIDE PLANT OUT OF CONTAINER. DISTURB THE ROOTS.
6. IF B&B PLANT, REMOVE BURLAP FROM AT LEAST THE TOP 12 INCHES OF THE ROOTBALL, WITHOUT DISTURBING THE ROOTBALL. REMOVE ALL CORD FROM THE TRUNK. REMOVE BURLAP AND WIRE BASKET (IF PRESENT) FROM THE ROOT BALL.
7. BACK FILL THE PLANTING HOLE WITH EXCAVATED NATIVE SOIL, BROKEN UP OR TILLED. WATER TO REMOVE AIR POCKETS. DO NOT ADD AMENDMENTS.
8. PLACE PINE STRAW OR BARK MULCH ON THE SURFACE TO A (SETTLED) DEPTH OF 1 TO 3 INCHES.

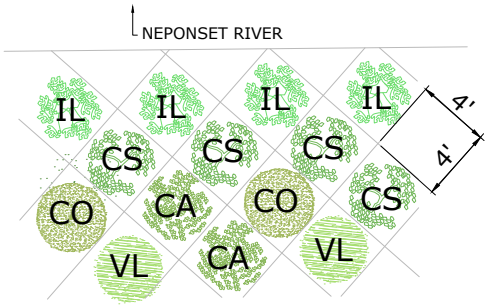

TYPICAL SHRUB PLANTING, INDIVIDUAL PLANTING HOLE
N.T.S.

PLANTING INVENTORY		
TREES		
AR	Acer rubrum	4
SHRUBS		
IV	Ilex verticillata	38
CS	Cornus sericea	33
CA	Cornus alternifolia	20
CO	Cephalanthus occidentalis	17
VL	Viburnum lentago	21
TOTAL		135
GRASS SEED MIX		
	Erosion/Restoration Seed Mix	10,100sqft

1. ALL PLANT MATERIALS SHALL BE IN ACCORDANCE WITH THE AMERICAN STANDARDS FOR NURSERY STOCK (ANSI Z60.1-2004). PLANT ACCORDING TO ANSI A300 PART 6.
2. DIG THE PLANTING HOLE A MINIMUM OF 2x WIDTH OF ROOTBALL FOR AT LEAST THE FIRST 12 INCHES OF DEPTH. BELOW 12 INCHES, DIG HOLE WIDE ENOUGH TO PERMIT ADJUSTING. DO NOT DIG THE HOLE DEEPER THAN ROOT BALL DEPTH.
3. SCARIFY THE SUBGRADE AND SIDES OF THE PLANTING HOLE WHEN PLANTING IN CLAY SOILS (MORE THAN 15% CLAY).
4. LIFT AND SET THE TREE BY ROOT BALL ONLY. DO NOT LIFT USING THE TREE TRUNK AND DO NOT USE TREE TRUNK AS A LEVER.
5. SET THE TOP OF THE ROOT BALL LEVEL WITH THE SOIL SURFACE OR SLIGHTLY HIGHER IF THE SOIL IS PRONE TO SETTLING.
6. AFTER THE TREE IS SET IN PLACE, REMOVE BURLAP, WIRE AND STRAPS FROM AT LEAST THE UPPER 1/3 OF THE ROOTBALL.
7. BACKFILL WITH EXISTING SOIL THAT HAS BEEN WELL-TILLED OR BROKEN UP. DO NOT ADD AMENDMENTS TO THE BACKFILL SOIL. AMEND THE SURFACE WITH MULCH.
8. USE THREE 2" X 2" WOOD STAKES DRIVEN INTO UNDISTURBED SOIL A MINIMUM OF 16 INCHES. SPACE STAKES EQUALLY AROUND THE TREE.
9. ATTACH 3/4" NYLON WEBBING TO CONNECT THE TREE TO STAKES. ATTACH WEBBING AT 1/3 THE TREE HEIGHT.
10. APPLY A 2-3" (SETTLED) DEPTH OF PINE STRAW OR BARK MULCH TO THE PLANTING SURFACE. LEAVE A 2" SPACE AROUND THE TRUNK FOR AIR CIRCULATION.
11. PRUNING SHALL BE LIMITED TO DEAD, DISEASED, OR BROKEN LIMBS ONLY AND SHALL BE IN ACCORDANCE WITH ANSI A300 SPECIFICATIONS.
12. REMOVE ANY TRUNK WRAP REMAINING AT TIME OF PLANTING. NO WRAPS SHALL BE PLACED ON TRUNK.

1. INTRODUCTION

On behalf of Bird Incorporated d.b.a. CertainTeed Roofing (CertainTeed), Ramboll Environ U.S. Corporation (Ramboll Environ) has prepared this regulatory compliance statement to demonstrate compliance with the Massachusetts General Permit No. 17 (GP17) for the remediation. As described below, CertainTeed is implementing the Phase IV Implementation Plan under the Massachusetts Contingency Plan (MCP) to remediate Light Non-Aqueous Liquid (LNAPL) associated with Release Tracking Number (RTN) 4-24105 a historic release on the site located in Norwood, Norfolk County, Massachusetts (See Appendix A). This compliance statement is submitted with the required Pre-Construction Notification (PCN) that includes the completed ENG4345 Form, vicinity plan and project drawings for the planned remediation.

1.1 Project Location

The CertainTeed property is located at 1077 Pleasant Street, Norwood, Massachusetts, and comprises approximately 43.2 acres. A 3.65 acre portion of the plant is located to the south in the Town of Walpole. The Disposal Site is situated on an approximate 2 acre portion of the CertainTeed manufacturing facility immediately adjacent to the Neponset River on the north/northeasterly portion of the property (Figure 1). The property is utilized by CertainTeed for the manufacturing, storage, and shipping of roofing shingles and rolled roofing, and has been used for this purpose for over 100 years. Along the western and northern property boundaries, the property is heavily vegetated and the topography slopes steeply toward the Neponset River, 20 to 30 feet below. The steep slopes are created by historic fill, which underlies the majority of the property, and which, based off of historical documents and visual observations, is composed of shingle waste material containing asphaltic tar. The project location is shown on Figure 2.

1.2 Background

In 1973, oil was observed on the Neponset River, emanating from the disposal Site south of the river, where numerous storage tanks were located at the time. Petroleum products historically stored in those tanks include asphalt/asphalt products, #2 fuel oil, process oil, waste oil, thermal oil, spindle oil, white oil, low sulfur diesel fuel, and #6 fuel oil. Reportedly, all tanks were removed in the 1980s under Department of Environmental Quality Engineering (DEQE) oversight. The release history and previous investigations and response actions are detailed in Ramboll Environ's Phase II Comprehensive Site Assessment, dated July 2016 (Phase II), and the documents referenced therein.

Various rounds of investigation and response actions have taken place at the property to address and evaluate the nature and the extent of the release. The majority of previous investigations and response actions are focused on the upland portion of the Disposal Site, where a network of monitoring wells indicates a wide-spread presence of LNAPL. Oil recovery systems have been installed at the Disposal Site in the past, to prevent continued migration of LNAPL into the Neponset, with limited success. Since 2013, an oil containment boom system has been deployed in the Neponset along the Disposal Site to contain and capture petroleum seepage into the river. A more recent remedial investigation was conducted under the IRA, with a primary focus on closing the data gaps required to support the design of a remedy. Details of these investigations and the

selected remedy design are detailed in Ramboll Environ's Phase II Comprehensive Site Assessment dated August 2016 (Phase II) and Phase III Remedial Action Plan, dated February 2017 (Phase III), and the documents referenced therein.

1.3 Regulatory Jurisdiction

The USACE regulates activities in the nation's waters according to Section 10 of the Rivers and Harbors Act and Section 404 of the Clean Water Act (CWA). Section 10 of the Rivers and Harbors Act requires approval prior to any work in or over navigable waters of the United States, or which affects the course, location, condition or capacity of such waters. Section 404 of the Clean Water Act requires approval prior to discharging dredged or fill material into the waters of the United States, including wetlands. Nationwide Permits (NWPs) are available from USACE for common disturbance activities. In Massachusetts, USACE has approved a General Permits that replace the NWPs. The proposed activity is authorized by the GP17 for the Cleanup of Hazardous and Toxic Wastes, which include:

> *Specific activities to effect the containment, stabilization, or removal of hazardous or toxic waste materials, including court ordered remedial action plans or related settlements, which are performed, ordered or sponsored by a government agency with established legal or regulatory authority.*

Based on the area of disturbance (>5,000 square feet and <1 acre), the GP17 requires submission of a PCN.

1.4 Purpose

This regulatory compliance statement is prepared to demonstrate compliance with the general conditions for Massachusetts General Permits as well as the supplemental General Conditions provided in Section IX of the March 2015 General Permit guidance.

2. PROJECT DESCRIPTION

2.1 Overview

As shown on Figure 2, the proposed scope of work will include the construction of a remedy that consists of 1) an upland component designed to eliminate visible light non-aqueous phase liquid (LNAPL) from releasing into the Neponset River and 2) a river component designed to remove and isolate LNAPL impacted sediments from the aquatic environment, which is the portion of this work covered by the GP17. Detailed site plans are included with the PCN. The portion of work in the river is described further below.

2.2 Proposed Remedial Action

The river component of the proposed remediation includes the following major elements:

- Excavating and disposing, at a certified off-site facility, two feet of impacted sediments as depicted on Drawing 4 & 7.
- Excavating and disposing, at a certified off-site facility, impacted soils from the southern river bank as depicted on Drawing 4 & 7.
- Conditioning excavated sediment to reduce moisture and allow off-site disposal.
- Restoring the river bed with treatment media (i.e., oleophillic clay) and armoring while maintaining a zero net fill as depicted on Drawing 10.
- Restoring the southern river bank with select clean fill as depicted on Drawing 10.

More specifically, sediment removal and capping will include the following:

- Maintaining dust and erosion control measures and preventing discharges to adjoining water bodies.
- Managing and preventing storm water contact with contaminated sediment. This water will be considered contact water and will be managed as such (i.e., not storm water).
- Constructing, operating, inspecting and maintaining temporary stream diversion system within the Neponset River.
- If needed, constructing, operating, inspecting and maintaining dewatering systems for excavations and management of removed water. This water will be considered contact water and will be managed as such (i.e., not storm water).
- Excavating designated areas to target depths and disposing off-site at an approved facility the removed sediments.
- Capping designated areas with reactive media and armoring.
- Managing, disposing and/or recycling of all waste generated during construction.
- Conducting post-construction and compliance surveys.
- Shoreline restoration as depicted in the attached plans and specifications including the planting plan describing the vegetation to be installed along the river bank.

3. STATEMENT OF COMPLIANCE WITH MASSACHUSETTS GENERAL CONDITIONS

This section presents and describes compliance with the applicable General Permit conditions for Massachusetts, as specified in the 2015 Massachusetts General Permits as well as the supplemental General Conditions provided in Section IX of the March 2015 General Permit guidance. In each sub-section, the general condition is quoted or summarized (if lengthy) in *italics* and followed by a statement of compliance or non-applicability of that policy.

3.1 Other Permits

Permittees must obtain other Federal, State, or local authorizations required by law. Applicants are responsible for applying for and obtaining all required State or local approvals. Work that is not regulated by the State, but is subject to Corps jurisdiction, may be eligible for SV or PCN under these GPs.

In order for authorizations under these GPs to be valid, when any of the following State approvals or statutorily-required reviews is also required, the approvals must be obtained prior to the commencement of work in Corps jurisdiction:

- *Final Order of Conditions under the Massachusetts Wetlands Protection Act (WPA).*
- *Waterways license or permit under MGL c. 91, from MassDEP must be obtained for activities subject to its jurisdiction.*
- *Water Quality Certification is required for work in Corps jurisdiction involving a discharge of dredged or fill materials to waters of the U.S., including wetlands.*
- *Coastal Zone Management: For projects requiring a PCN in or affecting the coastal zone, the Corps will coordinate review with the MA Office of CZM and then notify applicants if an Individual CZM concurrence is required.*

In addition to the GP17, the applicant is seeking or has obtained the following additional permits and approvals to remediate LNAPL-impacted sediments and prevent future releases into the Neponset River:

- Town of Norwood WPA Final Order of Conditions

  CertainTeed submitted a Notice of Intent (NOI) on June 7, 2017 to the Norwood Conservation Commission. When received, the Final Order of Conditions will be provided to USACE New England District.

- MassDEP Combined 401 Water Quality Certificate/Chapter 91 Permit
  - On June 15, 2017, CertainTeed submitted an application to MassDEP for a Combined 401 Water Quality Certificate/Chapter 91 Permit. When received, the combined 401 WQC/Chapter 91 Permit will be provided to USACE New England District.

Based on a review of the Coastal Zone Management Program, the Project is outside the limits of the coastal zone, therefore CZM concurrence would not be necessary.

3.2 Federal Jurisdictional Boundaries

Activities shall be evaluated with reference to Federal jurisdictional boundaries. Applicants are responsible for ensuring that the boundaries depicted on permit drawings satisfy the Federal criteria defined at 33 CFR 328-329.

No wetlands occur with the project area; however work will occur within the Neponset River, a waters of the U.S. The limits of jurisdiction of this non-tidal waterway are defined by the Ordinary High Water Line as shown on the Project Drawings.; therefore this condition is met.

3.3 Minimal Direct, Secondary, and Cumulative Effects

Projects shall have no more than minimal direct, secondary and cumulative adverse environmental effects. Project proponents shall predict secondary and cumulative effects to the extent reasonable and practicable.

The proposed remediation in the Neponset River will generate a temporary disturbance, which will ultimately result in the removal/control of LNAPL impacted sediments. The removal of these impacted materials is expected to increase the quality of the water and sediment within the river, and will likely result in an increase of overall habitat quality. It is reasonably expected that the proposed remediation will create a temporary disturbance which will minimize to the most practicable extent any adverse direct, secondary, and cumulative environmental effects, therefore this condition will be met.

3.4 Mitigation

Activities must be designed and constructed to avoid and minimize adverse effects, both temporary and permanent, to waters of the U.S. to the maximum extent practicable at the project site (i.e., on site). Mitigation in all its forms (avoiding, minimizing, rectifying, reducing, or compensating for resource losses) is required to the extent necessary to ensure that the adverse effects to the aquatic environment are no more than minimal.

As part of Ramboll Environ's Phase III Remedial Action Plan, several remedial alternatives were identified and compared based on effectiveness of treatment and on the amount of impact that would be generated. After comparing the different remedies, detailed in the Phase III, for these two primary attributes Upland Alternative 5 (LNAPL absorption barrier and River Alternative 1 (Excavation and off-site disposal of contaminated sediments) were selected due to their likelihood that they would have the highest probability of effectiveness and would produce the least amount of impact to the Neponset River, a Water of the U.S. After removal of contaminated sediments, the river bottom will be restored to pre-remediation elevations. Remediation of the Neponset River will produce a temporary disturbance and is expected to have only a temporary impact, and will likely increase the overall quality of the river, therefore this condition is met. The river banks will be lined with

rip rap with the planting of scrubs at the top of bank. Upland areas disturbed by the construction will be revegetated with grass to control surface erosion. Details of the restoration is depicted and described in the attached design plans and technical specifications.

3.5 Single and Complete Projects

The use of more than one GP for a single and complete project is prohibited, except when the impact area of waters of the U.S. authorized by the GPs does not exceed the area limit of the GP with the highest specified area limit.

The proposed remedy will be completed under the GP17 only, therefore this condition has been met.

3.6 Historic Properties

No undertaking shall cause effects on properties listed on, determined to be eligible for listing on, or potentially eligible for listing on the National Register of Historic Places, including previously unknown historic properties within the permit area, unless the Corps or another Federal action agency has satisfied the consultation requirements of Section 106 of the National Historic Preservation Act (NHPA).

A search of the Massachusetts Cultural Resource Information System (MACRIS) database indicated that no historical areas, buildings, burial grounds, objects, or structures are present in the vicinity of the CertainTeed property. In addition to the preliminary MACRIS database search, a formal notification was sent to the Massachusetts Historical Commission notifying the corresponding State Preservation Officers (SHPO) of the proposed excavation areas onsite (See Appendix B). Based on the results of the MACRIS database search and the investigation conducted by SHPO, no historical areas, buildings, burial grounds, objects, or structures are present in the vicinity of the CertainTeed property and are unlikely to be impacted by the proposed excavations of the Neponset River, therefore no further action is warranted and this condition has been met.

3.7 National Lands

Permittees may not commence work on Corps properties and/or Corps- controlled easements until they have received any required Corps real estate documents evidencing site-specific permission to work.

The proposed remedial activities will not take place on or impact National Lands, Corp properties, and/or Corp controlled easements, therefore this condition does not apply.

3.8 Federal Threatened and Endangered Species

No activity is authorized which: a) is likely to directly or indirectly jeopardize the continued existence of a threatened or endangered species or a species proposed for such designation, as identified under the Federal Endangered Species Act (ESA), or which will directly or indirectly destroy or adversely modify the critical habitat of such species

The latest Massachusetts Natural Heritage atlas (October 1, 2008) indicates that there is no priority or estimated habitats mapped onsite.

Consultation with U.S. Fish and Wildlife (USFWS) IPaC system indicated that there are no threatened or endangered species or areas of critical habitat located in the proposed remediation area (See Appendix B).

The proposed remedial activities will require minimal tree removal and will cause a disturbance to a section of the Neponset River, however these alterations to the landscape are temporary and are likely to result in an increase of habitat quality in the future. Based on the nature of the proposed activity is not expected to adversely impact any threatened or endangered species or critical wildlife habitat, therefore this condition will be met.

3.9 Wild and Scenic Rivers

The following activities in designated rivers or study rivers in the National Wild and Scenic River (WSR) System require a PCN unless the National Park Service has determined in writing to the proponent that the proposed work will not adversely affect the WSR designation or study status:

i. *Activities that occur in designated rivers or study rivers, in and 0.25 miles up or downstream of designated rivers or study rivers, or in tributaries within 0.25 miles of designated rivers or study rivers;*

ii. *Activities that occur in wetlands adjacent to the segments in 9(a)(i) above;*

iii. *Activities that have the potential to alter the free-flowing characteristics in designated rivers or study rivers.*

The proposed remedial activities on the Neponset River is not a component of the Federal or State Wild and Scenic River system; therefore, this condition does not apply.

3.10 Navigation

There shall be no unreasonable interference with navigation by the existence or use of the activity authorized herein, and no attempt shall be made by the permittee to prevent the full and free use by the public of all navigable waters at or adjacent to the activity authorized herein.

The proposed activities do not involve work within a federally maintained navigable channel, but do allow for navigation by small recreational watercraft and therefore will not impact navigation. It is expected that that there will not be significant impacts to navigation, therefore this condition is met.

3.11 Federal Liability

In issuing these GPs, the Federal Government does not assume any liability for the following:

a. *Damages to the permitted project or uses thereof as a result of other permitted or unpermitted activities or from natural causes;*

b. *Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the U.S. in the public interest;*

c. *Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit;*

d. *Design or construction deficiencies associated with the permitted work; or*

e. *Damage claims associated with any future modification, suspension, or revocation of this permit*.

Bird Incorporated d.b.a. CertainTeed Roofing understands that the Federal Government does not assume liability for 1) Damages to the permitted project or uses thereof as a result of other permitted or unpermitted activities or from natural causes; 2) Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the U.S. in the public interest; 3) Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit; 4) Design or construction deficiencies associated with the permitted work; or 5) Damage claims associated with any future modification, suspension, or revocation of this permit.

3.12 Pile Driving and Removal

Derelict, degraded or abandoned piles in navigable waters, except for those inside of existing work footprints for piers, must be completely removed or cut and driven 3 feet below the surface to prevent interference with navigation and in some cases to remove polluting materials.

There are no derelict, degraded, or abandoned piles in the project area, therefore this condition does not apply.

3.13 Utility Line Installation and Removal

Subsurface utility lines shall remain subsurface. If it is necessary to discharge dredged or filled material to keep such utility lines buried or restore them to their original subsurface condition, written verification from the Corps may be required.

As part of the remedial action a One-Call and a third party utility clearance verification will be conducted prior to any activities which include breaking ground surface. Any subsurface utilities will remain subsurface after the remediation activities have been completed.

3.14 Heavy Equipment in Wetlands or Mudflats

Operating heavy equipment in wetlands or mudflats shall be minimized, and such equipment other than fixed equipment (drill rigs, fixed cranes, etc.) shall not be stored, maintained, fueled or repaired in wetlands or mudflats unless the equipment is broken down and cannot be easily removed or unless it is more environmentally damaging to do otherwise. An adequate supply of spill containment equipment shall be maintained on site.

The proposed remedial actions will not be occurring in a wetland or a mudflat. The remedial action in the river will require the construction of a temporary river bypass system, excavating and offsite disposal of impacted materials, restoration of sediments, and then the restoration of the river banks. During the remedial process no equipment will be staged, refueled, or operated in a wetland or mudflat, therefore this condition has been met.

3.15 Temporary Fill

a. *Temporary fill, construction mats and corduroy roads shall be entirely removed as soon as they are no longer needed to construct the authorized work. Temporary fill shall be placed in its original location or disposed of at an upland site and suitably contained to prevent its subsequent erosion into waters of the U.S.*

b. *All temporary fill and disturbed soils shall be stabilized to prevent its eroding into waters of the U.S. where it is not authorized. Work shall include phased or staged development to ensure only areas under active development are exposed and to allow for stabilization practices as soon as practicable, typically within three calendar days after disturbance. Accelerated stabilization (the providing of temporary or permanent cover by the end of the work day to prevent erosion) shall be employed as necessary. Temporary fill must be placed in a manner that will prevent it from being eroded by expected high flows.*

c. *Appropriate measures must be taken to maintain normal downstream flows and minimize flooding to the maximum extent practicable when temporary structures, work, and discharges of dredged or fill material, including cofferdams, are necessary for construction activities, access fills, or dewatering of construction sites. Place materials in a location and manner that does not adversely impact surface or subsurface water flow into or out of the wetland. Temporary fill authorized for discharge into wetlands shall be placed on geotextile fabric or other appropriate material laid on the pre-construction wetland grade where practicable to minimize impacts and to facilitate restoration to the original grade.*

d. *Construction debris and/or deteriorated materials shall not be located in waters of the U.S*.

During the remediation of the Neponset River a temporary water dam will be constructed, which bisects the river to allow for flow on one side and dry construction on the opposite. These activities will not stop the flow of the Neponset River, will still allow for normal downstream flows, and will minimize any flooding that may occur. During the remedial process all certified clean fill and areas where excavated impacted materials are staged will be secured in an upland area with Erosion Control Measures (ECM) in place. Upon completion of the remedial actions all construction related debris, including construction mats, will be removed from the work zones within the river. Once all construction related materials have been removed the temporary water dam will be deconstructed and the Neponset River will be returned to its original

pathing. All impacted sediments and soils staged in the upland area with ECM in place will be transported and disposed of at the appropriate facilities pending analytical results. Once staged impacted soils and fill materials have been successfully removed, the ECM controls will be removed. As stated above, the conditions of this rule will be followed during the remediation activities within the Neponset River, therefore these conditions will be met.

3.16 Restoration

Temporary fills must be removed in their entirety and the affected areas restored to their preconstruction condition, function and elevation. Trenches shall be constructed or backfilled so that the trench does not drain waters of the U.S..

Once the impacted materials have been removed from the proposed excavation area in the Neponset River, the sediment will be restored to its original grade. The excavated areas of the river will be restored by first placing a layer of reactive material (Oleophilic Clay) with a woven separation barrier or filtering geotextile fabric. Once the separation barrier is in place, approximately 6" of FS-1 filter stone will be placed, and then another 6" of Class 1 RIP-RAP on top of the FS-1. The river bank will be restored utilizing the same method, but with an approximate slope of 2:1. A control barrier, comprised of a soil cement slurry will be placed between the impacted upland area and the river. Certified clean lean backfill will be placed on both sides of the control barrier. The slope of the bank adjacent to the barrier will be sloped at an approximate 1.5':1'. A woven separation barrier or filtering geotextile fabric will be placed on top of the certified clean backfill and then a layer of armoring (Minimum of D50 of 8.5", minimum thickness 2 x D50) will be applied. The geogrid will be set between the two fill materials to provide slope stability.

Upon the completion of all remedial actions any remaining temporary fill or staged excavated soils/sediments will be removed from the site. No temporary fill will be left in the affected areas and affected areas will be restored to their original state.

3.17 Soil Erosion, Sediment and Turbidity Controls

a. *Appropriate soil erosion, sediment and turbidity controls must be used and maintained in effective operating condition during construction, and all exposed soil and other fills must be permanently stabilized at the earliest practicable date. Erosion, sediment and turbidity controls shall be capable of preventing erosion, of collecting sediment, suspended and floating materials, and of filtering fine sediment.*

b. *Temporary soil erosion, sediment and turbidity controls shall be removed promptly upon completion of work, but not until all disturbed areas are permanently stabilized. The sediment collected by these devices shall be removed and placed at an upland location in a manner that will prevent its later erosion into a waterway or wetland.*

All remedial activities where materials will be excavated or significantly disturbed will have ECM controls in place to prevent the erosion of sediment/soil. During the remediation of the Neponset River a temporary water dam will be constructed, which bisects the river to allow for flow on one side and dry construction on the opposite. Excavated materials and backfill materials will be staged in an appropriate upland area and properly secured with ECM controls in place to prevent erosion into any waterbodies. Upon completion of the remediation, the excavated areas will be backfilled and restored. Loose sediments/soils will be removed prior to the deconstruction of the work zones. Any sediment/soil collected by the ECM controls will also be removed as to prevent it from entering any waterbodies present in the area. Stockpiled materials will be transported and disposed of offsite, pending analytical results. Once all materials have been removed and there is no threat of erosion the ECM controls will be removed.

3.18 Time of Year Work Windows/Restrictions

Work authorized under GPs 1, 3, 5-20, 22 and 23 that occurs in or causes turbidity or sediment resuspension in streams or tidal waters must be conducted during the TOY work windows or not during the TOY restrictions specified in Section IX, Part A, Subpart 3, GC 18.

Based on a review of the Massachusetts Division of Marine Fisheries Technical Report TR-47, there is no spawning run habitat present in the Project Area. Additionally, a review of the latest Massachusetts Natural Heritage atlas (October 1, 2008) indicates that there is no priority or estimated habitats or vernal pools mapped onsite.

Due to the presence of Baker Dam, located downstream from the site in Milton, MA, there is no spawning run habitat present in the Norwood portion of the Neponset River. Though there is not access to this section of the River for migratory fish species, it is expected that there will be freshwater species such as fallfish, American eel, bluegill, largemouth bass, white sucker, pumpkinseeds, and yellow bullhead.

In an effort to reduce the impact to wildlife within the Neponset River, the proposed remedial activities have been designed to minimize the duration of any hydrological disruptions and the permittee will salvage aquatic organisms stranded during dewatering of the remedial area. It is reasonably expected that disturbances to the Neponset River will be temporary with limited impact to surrounding fish species, and post remediation of the river there will likely result in an increase of habitat quality.

Since there is no spawning run habitat or priority listed habitat located onsite and the disturbance to the river will be temporary it is recommended that no TOY restrictions be placed on the proposed remedial activities.

3.19 Aquatic Life Movements and Management of Water Flows

No activity may substantially disrupt the necessary life cycle movements of those species of aquatic life indigenous to the waterbody, including those species that normally migrate through the area, unless the activity's primary purpose is to impound water.

As mentioned in Section 3.18 Time of Year Work Windows/Restrictions, based on a review of the Massachusetts Division of Marine Fisheries Technical Report and of the latest Massachusetts Heritage atlas (October 1, 2008) there are no priority or estimated habitats or vernal pools mapped onsite.

Baker Dam, which is downstream of the site, prevents the migration of migratory fish to the section of the Neponset River in Norwood, MA. Though there is not access to this section of the River for migratory fish species, it is expected that there will be freshwater species such as fallfish, American eel, bluegill, largemouth bass, white sucker, pumpkinseeds, and yellow bullhead.

In an effort to reduce the impact to wildlife within the Neponset River, the proposed remedial activities have been designed to minimize the duration of any hydrological disruptions and the permittee will salvage aquatic organisms stranded during dewatering of the remedial area. It is reasonably expected that disturbances to the Neponset River will be temporary with limited impact to surrounding fish species, and post remediation of the river there will likely be an increase in habitat quality.

During the remedial process a temporary water dam will be constructed, which bisects the river to allow for flow on one side and dry construction on the opposite; therefore, the activity will not significantly disrupt the life cycle movements of indigenous species to the waterbody, and this condition is met.

3.20 Water Quality and Coastal Zone Management

a. *Applicants must satisfy any conditions imposed by the State, where applicable, in its CWA § 401 WQC for these GPs, or in any Individual § 401 WQC. See Section IX, Part A, Subpart 3, for state- specific information and to determine if any action is required to obtain a 401 WQC. The Corps may require additional water quality management measures to ensure that the authorized activity does not cause or contribute to a violation of water quality standards. All projects authorized by these GPs shall be designed, constructed and operated to minimize or eliminate the discharge of pollutants.*

b. *Applicants must satisfy any additional conditions imposed by the State in their Coastal Zone Management (CZM) Act consistency concurrences for these GPs, or in any Individual CZM consistency concurrences. See Section IX, Part A, Subpart 3, for state-specific information and to determine if any action is required to obtain an Individual CZM consistency concurrence. The Corps may require additional measures to ensure that the authorized activity is consistent with State CZM requirements.*

As stated in sections 3.1, CertainTeed has submitted applications for a MassDEP Combined 401 Water Quality Certificate/Chapter 91 Permit. When received this combined permit will be provided to the USACE New England District. The applicant will comply with conditions specified in the 401 Water Quality Certificate/Chapter 91 Permit during implementation of the permitted activity. For projects requiring a PCN in or affecting the coastal zone, the Corps will coordinate review with the MA Office of CZM and then notify applicants if an Individual CZM concurrence is required. Based on a review of the Coastal Zone Management Program, the Project is outside the limits of the coastal zone, therefore CZM concurrence would not be necessary.

3.21 Floodplains and Floodways

a. *Appropriate measures must be taken to minimize flooding to the maximum extent practicable.*

b. *Activities within 100-Year Floodplains must comply with applicable Federal Emergency Management Agency (FEMA)-approved State and/or local floodplain management permitting requirements*.

Portions of the property bordering the Neponset River are within the Zone AE (100 Year Floodplain) and special flood hazard areas ("subject to inundation by the 1% annual chance flood"). While the proposed project is within the 100 Year Flood Plain, the flood storage capacity of the site will increase by adding an additional 2,160 cubic feet of storage capacity. There will be no filling on site and a zero-net fill value will be maintained. , therefore this condition is met.

3.22 Storage of Seasonal Structures

Seasonal or recreational structures such as pier sections, floats, aquaculture structures, etc. that are removed from the waterway for a portion of the year (often referred to as seasonal structures) shall be stored in an upland location landward of mean high water (MHW) or OHW and not in wetlands, tidal wetlands, their substrate or mudflats.

No seasonal or recreational structures are planned for this project, therefore this condition does not apply.

3.23 Spawning, Breeding, and Migratory Areas

a. *Activities and impacts such as excavations, discharges of dredged or fill material, and/or suspended sediment producing activities in fish migratory areas, fish and shellfish spawning or nursery areas, or amphibian and migratory bird breeding areas, during spawning or breeding seasons shall be avoided and minimized to the maximum extent practicable. Activities that result in the physical destruction (e.g., through excavation, fill, or downstream smothering by substantial turbidity) of an important spawning area are not authorized.*

b. *Activities in waters of the United States that serve as breeding areas for migratory birds must be avoided to the maximum extent practicable.*

As mentioned in Section 3.18 Time of Year Work Windows/Restrictions, based on a review of the Massachusetts Division of Marine Fisheries Technical Report and of the latest Massachusetts Heritage atlas (October 1, 2008) there are no priority or estimated habitats or vernal pools mapped onsite.

Baker Dam, which is downstream of the site, prevents the migration of migratory fish to the section of the Neponset River in Norwood, MA. Though there is not access to this section of the River for migratory fish species, it is expected that there will be freshwater species such as fallfish, American eel, bluegill, largemouth bass, white sucker, pumpkinseeds, and yellow bullhead.

In an effort to reduce the impact to wildlife within the Neponset River, the proposed remedial activities have been designed to minimize the duration of any hydrological disruptions and the permittee will salvage aquatic organisms stranded during dewatering of the remedial area. It is reasonably expected that disturbances to the Neponset River will be temporary with limited impact to surrounding fish species, and post remediation of the river there will likely be an increase in habitat quality.

The proposed remedial activities are planned to take place on an inland portion of the Neponset River. During the remediation of the Neponset River a temporary water dam will be constructed, which bisects the river to allow for flow on one side and dry construction on the opposite. The river bypass is intended to allow for the continual flow of the river channel and to allow for uninterrupted migration of fauna.

Because there are no known fish migratory areas, fish and shellfish spawning or nursery areas, or amphibian and migratory bird breeding areas in the project area, and because river flow will be maintained during construction, impacts to these resources will be avoided or minimized; therefore these conditions have been met.

3.24 Vernal Pools

Direct, secondary and cumulative adverse effects to all vernal pools (VPs), including their envelopes and critical terrestrial habitats, shall be avoided and minimized to the maximum extent practicable. Site clearing, grading and construction activities associated with a regulated activity in the VP depression, envelope or critical terrestrial habitat may cause secondary or cumulative effects to the VP.

The proposed remedial activities are expected to occur in an upland area and in a section of the Neponset River. After review of the Massachusetts Heritage atlas (October 1, 2008), there have not been any areas of vernal pool (VP) habitat identified onsite and there is reasonable expectation that there will not be any known impacts to potential VP habitat, therefore this condition does not apply.

3.25 Invasive and Other Unacceptable Species

a. *The introduction or spread of invasive or other unacceptable plant or animal species on the project site or areas adjacent to the project site caused by the site work shall be avoided to the maximum extent practicable. For example, construction mats and equipment shall be thoroughly cleaned and free of vegetation and soil before and after use. The introduction or spread of invasive plant or animal species on the project site caused by the site work shall be controlled.*

b. *No cultivars, invasive or other unacceptable plant species may be used for any mitigation, bioengineering, vegetative bank stabilization or any other work authorized by these GPs. However, non-native species and cultivars may be used when it is appropriate and specified in a written verification, such as using* Secale cereale *(Annual Rye) to quickly stabilize a site. All PCNs should explain the reason for using non-native species or cultivars*.

Once the remedial actions have been completed, all areas where there was excavated sediments will be restored to condition pre-contamination. These excavated areas will be backfilled utilizing certified clean fill and then armored with stone. Any backfill materials used will be, to the fullest extent possible, free of vegetation. All construction equipment used in the remedial process will be cleaned of vegetation and soil before entering the work area and when leaving the work area. After the restoration has been completed and equipment is being demobilized from the work zone, all equipment used will be cleaned of vegetation and soil prior to demobilization. In the possibility that an invasive or uncontrolled species is introduced measures will be taken to reduce its impact to the maximum extent practicable, therefore these conditions are met.

3.26 Blasting

Blasting in waters of the U.S. associated with work such as dredging, trenching, pile installation, etc. is not authorized under these GPs and an IP is required.

The proposed remedial activities do not involve any type of blasting, therefore this condition does not apply.

3.27 Suitable Material

No activity may use unsuitable material (e.g., trash, debris, car bodies, asphalt, etc.). Material used for construction or discharged must be free from toxic pollutants in toxic amounts (see Section 307 of the Clean Water Act).

No unsuitable or contaminated material will be used for construction; therefore, this condition will be met.

3.28 Programmatic Agreements

The Corps requirements to comply with Section 106 of the NHPA, Section 7 of the Endangered Species Act or Essential Fish Habitat conservation under the Magnuson-Stevens Act may be satisfied by a Programmatic Agreement with the Corps, New England District or another Federal action agency.

The permittee understands that Corp must comply with the terms of the programmatic agreement requirements covered by Section 106 of the NHPA, Section 7 of the Endangered Species Act or Essential Fish Habitat conservation under the Magnuson- Stevens Act, and New England District or another Federal action agency.

3.29 Permit On Site

The permittee shall ensure that a copy of this GP and any accompanying authorization letter with attached plans are at the site of the work authorized by this GP whenever work is being performed and that all construction personnel performing work which may affect waters of the U.S. are aware of its terms and conditions. The entire permit authorization shall be made a part of any and all contracts and subcontracts for work that affects areas of Corps jurisdiction at the site of the work authorized by this GP. This shall be achieved by including the entire permit authorization in the specifications for work.

A copy of this GP17 and any accompanying authorization letters, along with any associated plans, will be posted at the Site where the proposed work activities will occur. Prior to the commencement of any work activities that may affect waters of the U.S., construction personnel will be made aware of the terms and conditions of the permit. This permit, plans, and any authorization letters will be included in any contracts or subcontracts for any work that occurs in an area which may affect waters of the U.S., therefore these conditions have been met.

3.30 Self-Verification Notification Form

Permitees must complete and submit the SVNF provided at Section VII to the Corps for work authorized by this GP. However, the SVNF is not required for the work specified in the notes to GPs 2, 16, 17, 19 and 21.

Based on the parameters of the proposed remedial action, the work activities are not covered under the Self Verification Notification Form and the permittee is required to provide a PCN.

3.31 Inspections

The permittee shall allow the Corps to inspect the authorized activity at any time deemed necessary to ensure that it is being or has been accomplished in accordance with the terms and conditions of this GP and any written verification. The Corps may also require post-construction engineering drawings for completed work or post-dredging survey drawings for any dredging work. To facilitate these inspections, the permittee shall complete and return to the Corps the following forms:

- *For Self-Verification: The SVNF (see GC 30).*
- *For PCN: The a) Work-Start Notification Form and b) Compliance Certification Form, when either are provided with the authorization letter*.

The permittee understands that the Corps possesses the authorization to conduct inspections, at any time, of any work activities covered by this General Permit. The permittee also understands that the Corps may also request post-construction drawings for completed work or post-dredging survey drawings. The permittee will submit a PCN, a Work-Start Notification Form, and a Compliance Certification Form to the Corps to facilitate their inspections as requested, therefore these conditions will be met.

3.32 Maintenance

Any authorized structure or fill shall be properly maintained, including maintenance to ensure public safety and compliance with applicable general conditions and activity-specific conditions to a written verification.

After the excavated areas have been backfilled with certified clean fill (Sand) and then armored with 1.5 ft of R-1 or R-2 stone, the restored areas will be inspected on a routine basis to ensure that the stone armor remains in place and that erosion has not occurred. These inspections will occur on a monthly basis through normal maintenance of the property.

3.33 Property Rights

These GPs do not convey any property rights, either in real estate or material, or any exclusive privileges, nor do they authorize any injury to property or invasion of rights or any infringement of Federal, State, or local laws or regulations.

The permittee understands that that approvals under the GP does not convey property rights, either in real estate or material, or any exclusive privileges, nor do they authorize any injury to property or invasion of rights or any infringement of Federal, State, or local laws or regulations, therefore this condition has been met.

3.34 Transfer of GP Verifications

When the structures or work authorized by these GPs are still in existence at the time the property is transferred, the terms and conditions of these GPs, including any special conditions, will continue to be binding on the entity or individual who received the GP authorizations, as well as the new owner(s) of the property. If the permittee sells the property Section IV 37 February 2015 associated with a GP verification, the permittee may transfer the GP verification to the new owner by submitting a letter to the Corps (see Section IX, Part E, for address) to validate the transfer.

No transfer of property is planned at this time, therefore this condition does not apply. If there is a transfer of property in the future, the permittee will continue compliance with the GP as required or arrange to transfer the GP verification in accordance with this GP condition.

3.35 Modification, Suspension, and Revocation

These GPs or any work authorized under these GPs by self-verification or PCN may be either modified, suspended, or revoked, in whole or in part, pursuant to the policies and

procedures of 33 CFR 325.7. Any such action shall not be the basis for any claim for damages against the U.S.

The permittee understands that the GP17 or any work authorized under this GP17 may be either modified, suspended, or revoked in whole or in part, pursuant to the policies and procedures under 33 CFR 325.7 and that Any such action shall not be the basis for any claim for damages against the U.S.

3.36 Special Conditions

The Corps may independently, or at the request of the Federal resource agencies, impose other special conditions on a project authorized pursuant to this GP that are determined necessary to minimize adverse navigational and/or environmental effects or based on any other factor of the public interest. Failure to comply with all terms and conditions of the authorization, including special conditions, constitutes a permit violation and may subject the permittee to criminal, civil or administrative penalties and/or an ordered restoration.

The permittee understands that the Corps may independently, or at the request of the Federal resource agencies, impose other special conditions on a project authorized pursuant to this GP17 that are determined necessary to minimize adverse navigational and/or environmental effects or based on any other factor of the public interest. The permittee also understands that failure to comply with all terms of the authorization, including special conditions, constitutes a permit violation. Any special conditions included under the GP17 will be complied with, therefore this condition will be met.

3.37 False or Incomplete Information

If the Corps makes a determination regarding the eligibility of a project under these GPs and subsequently discovers that it has relied on false, incomplete or inaccurate information provided by the permittee, the Corps may determine that the GP authorization is not valid; modify, suspend or revoke the authorization; and the U.S. Government may institute legal proceedings.

The permittee certifies that the information contained within this GP17 application has been accurately portrayed to the maximum extent practicable, therefore this condition has been met.

3.38 Abandonment

If the permittee abandons or decides to abandon the activity authorized under these GPs, the work must be removed and the area restored to the maximum extent practicable unless a GP or IP specifically authorizes the abandonment.

In the event that work must be abandoned, equipment and materials will be removed and the area restored to the maximum extent practicable.

3.39 Enforcement Cases

These GPs do not apply to any existing or proposed activity in Corps jurisdiction associated with an ongoing Corps or EPA enforcement action, until such time as the enforcement action is resolved or the Corps or EPA, as appropriate, determines that the activity may proceed independently without compromising the enforcement action.

This GP does not apply to any existing or proposed activity within Corps jurisdiction associated with an ongoing Corps or EPA enforcement action, therefore this condition does not apply.

3.40 Previously Authorized Activities

a. *Any work that was authorized in accordance with the state GPs that were in effect at the time these GPs were issued, remain in effect in accordance with the original provisions of those state GPs, including its terms, general conditions, and any special conditions in the written verification.*

b. *Projects authorized and completed under the previous GPs, Programmatic GPs (PGPs), nationwide permits, or regional GPs, are not affected by these GPs. associated with a GP verification, the permittee may transfer the GP verification to the new owner by submitting a letter to the Corps (see Section IX, Part E, for address) to validate the transfer. A copy of the GP verification must be attached to the letter, and the letter must contain the following statement and signature:*

"When the structures or work authorized by these GPs are still in existence at the time the property is transferred, the terms and conditions of these GPs, including any special conditions, will continue to be binding on the new owner(s) of the property. To validate the transfer of these GPs and the associated liabilities associated with compliance with its terms and conditions, have the transferee sign and date below." (Transferee)

c. *Activities authorized pursuant to 33 CFR 330.3 ("Activities occuning before certain dates") are not affected by this GP.*

No prior authorizations or GPs exist for the proposed remedial activities, therefore this condition does not apply.

3.41 Duration of Authorization

These GPs expire on February 4, 2020. Activities authorized under GPs 1 - 2 3 that have either commenced (i.e., are under construction) or are under contract to commence before these GPs expire will have until February 4, 2021 to complete the activity under the terms and conditions of the current GPs. The permittee must be able to document to the Corps satisfaction that the project was under construction or under contract by the appropriate date. If work is not completed within the one year extended timeframe, the permittee must contact the Corps if he/she wants the work to continue to be authorized after that date.

The permittee understands that the GP17 will expire on February 4, 2020. If the activities have not been completed by that time, the applicant understands that if the activities have commenced or are under contract to commence, then the applicant has one additional year to complete the work (until February 4, 2021), if the applicant can that the project was under construction or under contract by February 20, 2020.

3. DORMANT OR ABANDONED UTILITIES OTHER THAN THOSE SHOWN IN THIS PLAN ARE LIKELY TO BE PRESENT.
4. SLABS AND OTHER STRUCTURES WITHIN REMEDIATION AREAS WILL BE DEMOLISHED PRIOR TO REMEDIATION CONSTRUCTION ACTIVITIES.
5. THE TEMPORARY DIVERSION SYSTEM SHOWN IS ONE OF TWO OPTIONS.
6. NEPONSET RIVER STAFF GAUGE MEASUREMENTS AT THE SITE WERE COMPARED TO REPORTED WATER LEVEL MEASUREMENTS FOR THE USGS GAUGING STATION 01105000, NEPONSET RIVER AT NORWOOD, MA BETWEEN MAY 10 AND MAY 30, 2017 TO ESTABLISH A CORRECTION VALUE. THE HIGH AND LOW WATER MARKS FOR THE NEPONSET RIVER AT THE SITE OVER THE PREVIOUS YEAR WERE DETERMINED BY ADJUSTING THE HISTORICAL HIGH AND LOW WATER LEVELS REPORTED THE USGS GAUGING STATION 01105000 FOR THE PERIOD OF MAY 22, 2016 THROUGH MAY 22, 2017 USING THE CORRECTION VALUE. THE HIGH AND LOW WATER MARK ELEVATIONS ARE RELATIVE TO NAVD 1988.

April 20, 2017

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 et seq.).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 et seq.), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the

human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

New England Ecological Services Field Office

Endangered Species Act Species

There is a total of 0 threatened, endangered, or candidate species on your species list. Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species. See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area. Please contact the designated FWS office if you have questions.

Critical habitats

There are no critical habitats within your project area.

RE: REQUEST FOR PROJECT REVIEW
BIRD INCORPORATED D.B.A. CERTAINTEED ROOFING
1077 PLEASANT STREET, NORWOOD, MASSACHUSETTS

Dear Sir/Madam:

Bird Incorporated d.b.a. CertainTeed Roofing property located at 1077 Pleasant Street, Norwood, Massachusetts (Figure 1) is required to implement a remedial plan approved by Massachusetts Department of Environmental Protection (MassDEP) and is seeking required permits and approvals to implement that plan. These permits include: USACE New England General Permit 17 (GP17), MassDEP Wetlands Protection Act (WPA) Permit, and Mass combined 401 Water Quality Certificate/Chapter 91 Permit.

Ramboll Environ
1760 Market Street
Suite 1000
Philadelphia, PA 19103
USA

T +1 215 523 5600
F +1 215 496 0164
www.ramboll-environ.com

To satisfy conditions of the Massachusetts GP17, it is required that no undertaking "shall cause effects on properties listed on, determined to be eligible for listing on, or potentially eligible for listing on the National Register of Historic Places, including previously unknown historic properties within the permit area". A preliminary search of the Massachusetts Cultural Resource Information System (MACRIS) indicated that no historical areas, buildings, burial grounds, objects, or structures are present in the vicinity of the CertainTeed property. As a follow-up to this preliminary database search, Ramboll Environ is requesting a formal review of the project by the Massachusetts Historic Commission (MHC). To facilitate that review, the following items are enclosed:

- Completed SHPO/THPO Notification Form, and
- Completed MHC Project Notification Form.

We appreciate your attention to this request. Should you have any questions or require additional information, please contact Laura at lgeorge@ramboll.com or (215) 523-5603, or Owen at ozalme@ramboll.com or (215) 523-5617.

Sincerely,

Laura George

ATTACHMENT A
COMPLETE FORMS

US Army Corps of Engineers®
New England District

VIII: SHPO/THPO Notification Form

In accordance with General Condition 6, proponents must ensure and document that all potential historic properties within the permit area have been identified. For PCN activities, proponents must notify the SHPO and applicable THPO(s) and provide proof as specified in Section IX, Part B(2) and submit a copy of any other documentation with the PCN. This form may be used for self-verification or PCN activities. It is recommended that you complete all fields (write "none" or "see attached form" if applicable), attach any Corps or State waterway agency application form, and attach plans and a copy of the USGS quadrangle map section that clearly marks the project location.

The SHPOs and THPOs will contact the Corps if there is any potential for an effect on a historic property and the Corps will begin consultation. Applicants need to coordinate with the Corps before conducting any onsite archaeological work (reconnaissance, surveys, recovery, etc.) as the Corps will use 33 CFR 325 Appendix C, including its "permit area" definition, to determine its scope of analysis for the consideration of historic properties. This is to ensure that work is done in a cost-effective manner, in accordance with Corps requirements and to avoid effects to historic properties before the consultation requirements of Section 106 of the NHPA have been satisfied.

REGULATORY AUTHORITY

950 CMR 71.00: M.G.L. c. 9, §§ 26-27C as amended by St. 1988, c. 254.

Guidance for Completing MHC's ***Project Notification Form*** *(950 CMR 71.00, Appendix A)*

❖ Please make sure you **type or print le i ly** the Project Notification Form (PNF) and fill out **all** sections of the form.

❖ Please submit a PNF for **eac** project separately. This will facilitate MHC's review of multiple project submissions.

❖Please include the street and number in the address line of the project area. Please be sure to specify the town name.

❖ Please make sure you fill out *both* the **pro ect address section** and the **pro ect contact** section. Please note that these two addresses may be the same in some cases. It is important for MHC to have a contact person in order to facilitate review, should questions arise.

❖ The funding, licensing, and permitting section **must e completed** in order for MHC to review the PNF. Be sure to list *all* funding, licensing and permitting involved with the entire project; this includes **federally** funded, licensed, and permitted projects, as well as **state** funded, licensed, and permitted projects. Some examples of common funding, licensing, and permitting agencies and funding sources are: **rmy Corps of n ineers ederal Communications Commission Community e elopment loc rants c ool uildin ssistance from t e assac usetts epartment of ducation epartment of ousin and Community e elopment epartment of n ironmental rotection permits suc as se er connection etlands or C apter permits assac usetts i ay epartment cur cut permits etc. ere are many ot ers.**

❖ Please be sure to **descri e** the proposed project in **detail**. Attach additional pages if necessary. If dates of construction on buildings or dates of alterations to a site are known, please be sure to include this information in your project description.

❖ Please include photographs of the proposed project site. If the project involves demolition or rehabilitation of a building(s), be sure to include photos of major elevations of the building(s). Please also be sure to label photographs. Attach the most current project plans and elevations if available.

❖ **lease e sure to include a p otocopy of t e pertinent section of t e . . . . map it your su mission**. The MHC cannot review a PNF without a U.S.G.S. section map. You can purchase U.S.G.S. maps at local camping, hiking, and sporting goods stores, or download U.S.G.S. maps from the World Wide Web at www.topozone.com; or make a photocopy of U.S.G.S. maps at libraries.

❖ Do not use other maps instead of the U.S.G.S. map. However, additional maps such as plot plans or assessors' maps may be included **in addition** to the U.S.G.S. section map.

❖ **oundaries of t e pro ect area** should be specific. Do not circle a large plot of land on the U.S.G.S. map and indicate that the project falls within the circle.

This guidance document is offered to assist in compliance with M.G.L. Chapter 9, Section 26-27c, as amended by Chapter 254 of the Acts of 1988 (950 CMR 71.00)

RE: GENERAL PERMIT 17 (NAE-2017-01881)
BIRD INCORPORATED D.B.A. CERTAINTEED ROOFING
RELEASE TRACKING NUMBER (RTN) 4-24105
NORWOOD, MA

Dear Ms. Wilkinson:

On behalf of the project applicant and owner, Bird Incorporated d.b.a. CertainTeed Roofing (CertainTeed), please find enclosed the items requested in your August 11, 2017 email regarding the pending Pre-Construction Notice (PCN) for a General Permit 17 (NAE-2017-01881) for implementing remediation work at a site located in Norwood, Norfolk County, Massachusetts. To address your comments, the following items are enclosed:

Ramboll Environ
1760 Market Street
Suite 1000
Philadelphia, PA 19103
USA

T +1 215 523 5600
F +1 215 496 0164
www.ramboll-environ.com

- Revised Project Drawings (Attachment A)

  The Project Drawings have been revised by removing layers not pertinent to your review. In addition the drawing set has been reduced to include:

  – Plan View of Existing Conditions (Drawings 1 and 2)
  – Plan View of Proposed Remediation (dredging area) (Drawings 3 and 4)
  – Plan View of Proposed Restoration (Drawings 5 and 6)
  – Cross Sections, including existing conditions, remediation and restoration (Drawing 7)

  As noted on Drawings 3 and 4, a total of 910 cubic yards (cy) of sediment will be removed from a 13,070 square feet area below the ordinary high water line (OHWL). As noted on Drawings 5 and 6, 910 cy of fill will be placed a 13,070 square feet area below the OHWL to restore the Neponset River stream bed to pre-dredging elevations and to stabilize 430 linear feet of bank.

- Additional SHPO/THPO Proof of Notification or Response Documents (Attachment B)

  A completed SHPO/THPO Notification Form and completed Massachusetts Historical Commission (MHC) Project Notification Form was submitted to the Massachusetts Board of Underwater Archaeological Resources and other tribal agencies not previously contacted. Notice was previously submitted to

MHC. Responses have been received from all agencies except for Wampanoag Tribe of Gay Head and Narragansett Indian Longhouse. Confirmation of delivery to these two agenceis and all responses received are included in Attachment B.

Should you have any questions or require any additional information, please do not hesitate to contact me at lgeorge@ramboll.com or 215-523-5603.

Sincerely,

Laura George

PROJECT NOTIFICATION FORM

Project Name: CertainTeed

Location / Address: 1077 Pleasant Street

City / Town: Norwood, Massachusetts

Project Proponent

Name: Mary Kluit

Address: 1077 Pleasant Street

City/Town/Zip/Telephone: Norwood, MA 02056 (7[illegible])

After review of MHC files and the materials you submitted, it has been determined that this project is unlikely to affect significant historic or archaeological resources.

Brona Simon 5/12/17

Brona Simon Date
Executive Director
State Historic Preservation Officer
Massachusetts Historical Commission

Agency license or funding for the project (list all licenses, permits, approvals, grants or other entitlements being sought from state and federal agencies).

Agency Name	Type of License or funding (specify)
USACE, New England District	Massachusetts General Permit 17

Project Description (narrative):

To implement the MassDEP approved remediation plan, the project will include demolition of buildings, excavation of contaminated soils in upland areas, excavation of contaminated sediments in the Neponset River, installation of an control barrier to protect the river from light non-aqueous phase liquid (LNAPL).

Does the project include demolition? If so, specify nature of demolition and describe the building(s) which are proposed for demolition.

The project includes demolishing FB-43, the adjacent cooling fans and foundations, the two out-of-service oil skimmers, as well as a foundation slab east of the access road associated with a former building

Does the project include rehabilitation of any existing buildings? If so, specify nature of rehabilitation and describe the building(s) which are proposed for rehabilitation.

No

Does the project include new construction? If so, describe (attach plans and elevations if necessary).

No new building construction.

APPENDIX A (continued)

To the best of your knowledge, are any historic or archaeological properties known to exist within the project's area of potential impact? If so, specify.

None known to exist.

What is the total acreage of the project area?

Woodland	0.24	acres	Productive Resources:		
Wetland		acres	Agriculture		acres
Floodplain	1.82	acres	Forestry		acres
Open space		acres	Mining/Extraction		acres
Developed	1.10	acres	Total Project Acreage	1.66	acres

Total acreage includes 0.32 acres of open water

What is the acreage of the proposed new construction? 0 acres (buildings), 1.66 acres (land disturbance)

What is the present land use of the project area?

Industrial

Please attach a copy of the section of the USGS quadrangle map which clearly marks the project location.

See attached site location map

RE: Certain Teed, 1077 Pleasant Street, Neponset River, Norwood, MA

Dear Ms. George,

The staff of the Massachusetts Board of Underwater Archaeological Resources has completed its review of the proposed sediment removal component of Certain Teed Project in Norwood as described in the MHC PNF, SHPO/THPO Notification From and supporting materials provided by Ramboll Environ on behalf of Bird Incorporated (dba Certain Tweed Roofing). We offer the following comments.

The Board has conducted a preliminary review of its files and secondary literature sources to identify known and potential submerged cultural resources in the proposed project area. No record of any underwater archaeological resources was found. Based on the results of this review, the Board expects that this project is unlikely to impact submerged cultural resources.

However, should heretofore-unknown submerged cultural resources be encountered during the course of the project, the Board expects that the project's sponsor will take steps to limit adverse affects and notify the Board, as well as other appropriate agencies, immediately in accordance with the Board's *Policy Guidance for the Discovery of Unanticipated Archaeological Resources*.

The Board appreciates the opportunity to provide these comments as part of the review process. Should you have any questions regarding this letter, please do not hesitate to contact me at the address above, by email at victor.mastone@state.ma.us, or by telephone at (617) 626-1141.

Sincerely,

Victor T. Mastone
Director

Point of Contact	Laura George

Response: August 14, 2017

☒ We have no concerns related to the proposed project. MWT anticipates no adverse effects to our sites of cultural significance, by you or your client.

☐ The MWT considers this project in compliance with the MWTôs section 106 review process with agreed upon mitigations measures.

☐ This site will require the on-site presence of a Tribal Cultural Resource Monitor during ground disturbing activities. Contact the Compliance Review Supervisor with construction schedule.

☐ This project has the potential to have ñadverse effectsò to historic or cultural resources important to our tribe. We recommend the following actions:
Upon review of the documents received we anticipate ñno adverse effectsò related to your project as proposed. If the project scope or design should change we will need to review further.

This project as proposed can in no way obstruct or diminish Mashpee Wampanoag rights to access and utilize the area for shell fishing, gathering and foraging of sustenance.

This consultation process is in compliance to the National Historic Preservation Act of 1966 and all relevant amendments including but not limited to section 106 and 36 CFR 800.

Condition: If archaeological resources or human remains are found during construction, **you must immediately stop construction and notify our office.**

Ramona Peters, Compliance Review Supervisor

1. INTRODUCTION

Ramboll Environ (RE) prepared a Notice of Intent (NOI) for a National Pollutant Discharge Elimination System (NPDES) General Permit for Remediation Activity Discharges, Massachusetts General Permit (RGP) for dewatering activities associated with stream remediation at the CertainTeed Roofing Plant located at 1077 Pleasant Street, Norwood, Massachusetts on behalf of the site owner, CertainTeed Roofing (CertainTeed). This NOI is being submitted to the Massachusetts Department of Environmental Protection (MassDEP) and United States Environmental Protection Agency (USEPA) in accordance with the requirements of the Massachusetts General Permit No. MAG910000.

This NOI for an RGP is being submitted to account for site remediation activities being conducted at the facility. A portion of these activities include the dewatering of groundwater and/or excavated stream sediments to allow for the removal of contaminated soils and sediment and the construction of a light non aqueous phase liquid (LNAPL) control barrier along the river bank. Based on recent groundwater sampling, no contaminants, including LNAPL were detected in the anticipated dewatering area. For the purpose of this NOI, the "facility" is defined as the area located within the property boundaries of 1077 Pleasant Street, Norwood, Massachusetts. A Site Locus Map is presented as **Figure 1**. A Site Plan is presented as **Figure 2**. A copy of the NOI is included as **Attachment A**.

2. GENERAL FACILITY INFORMATION

General disposal site information for which this Phase I applies includes the following:

Property Owner/Facility Operator:	Steven Forrest Bird Incorporated d.b.a. CertainTeed Roofing 1077 Pleasant Street Norwood, Massachusetts 02062 Tel: (781) 278-0444
Owner/Facility Operator Contact:	Steven Forrest, Director of Construction steven.forrest@saintgobain.com Tel: (781) 278-0444
USGS Quadrangle:	Norwood, Massachusetts
Longitude, Latitude: (approximate)	71° 12' 29.0" W, 42° 10' 3.9" N
Disposal Site Zoning:	Industrial
County:	Norfolk

2.1 Facility Description

The facility is a CertainTeed Roofing manufacturing plant comprised of 12 buildings on 43.2 acres, located at 1077 Pleasant Street, Norwood, Massachusetts. It is bounded on the east by Pleasant Street, on the north by wooded land, and on the north and west by the Neponset River. A 3.65-acre portion of the plant is located to the south in the Town of Walpole. The Disposal Site (MassDEP

Release Tracking Number (RTN) 4-24105) where the proposed work is to occur is situated on an approximately 2-acre portion of the facility immediately adjacent to and in the Neponset River on the north/northeasterly portion of the property. A topographic map with the facility location and Neponset River is provided in **Figure 1**. **Figure 2** provides a site plan, including a proposed dewatering discharge location (Outfall A).

2.2 Sensitive Environmental Receptors

The nearest water body to the facility is the Neponset River located adjacent to the north and west. The Neponset River is classified as an impaired water body and Total Maximum Daily Load (TMDL) is required but not yet established. Riverine wetland, associated with the Neponset River is located on site; portions of the facility are also located in a 100-year floodplain. No water supply aquifers or other protected areas were mapped on site.

No Areas of Critical Environmental Concern (ACEC), local, state and/or federally protected open space, or threatened or endangered species are identified within 500 feet of the disposal site. Areas of Priority Habitats of Rare Species, Habitats of Rare Wildlife, or Certified Vernal Pools are not located within 500 feet of the disposal site. The nearest wetlands, which include potential vernal pools, are associated with the edge of Neponset River to the west of the Disposal Site. Water Resources and TMDL mapping in relation to the facility are presented on **Figure 3**. **Figure 4** provides a MassDEP Bureau of Waste Site Cleanup (BWSC) Receptor Map identifying potential environmental receptors within a 500 foot and ½ mile radius from the disposal site.

2.3 RGP Status

An RGP permit has not been previously applied for or granted for this discharge, and thus CertainTeed is considered a new discharger under the RGP.

3. DISCHARGE INFORMATION

This NOI for a RGP is being applied for groundwater discharge necessary during site remediation activities. The proposed remedial scope of work will include the construction of a remedy that consists of 1) an upland component designed to prevent visible light non-aqueous phase liquid (LNAPL) releases into the Neponset River via groundwater; and 2) a river component designed to remove and prevent LNAPL impacted sediments from impacting the aquatic environment in the future.

Construction of the upland component includes the following major elements:

- Implementing soil erosion and sediment measures.
- Decommissioning and demolishing cooling fans and Building FB-43 and associated subsurface structures (**Figure 2**).
- Installing a NAPL control barrier (i.e., an impermeable wall with treatment media, such as oleophillic clay) along the southern bank of the Neponset River to prevent LNAPL discharges to the river via groundwater.
- Operation of a groundwater dewatering treatment system as further described below and in attachment A.
- Excavating LNAPL-impacted soils from readily accessible upland areas (hot spots) and disposing at a certified off-site facility.

- Restoring the site features affected during construction (i.e., storm water dissipaters, paved areas and monitoring wells that will form part of the long-term monitoring network) upon completing removal and backfilling activities and installing the LNAPL control barrier.

The river component includes the following major elements:

- Excavating the upper two feet of LNAPL-impacted sediments[1] and disposing at a certified off-site facility.
- Excavating LNAPL-impacted soils from the southern river bank and disposing at a certified off-site facility.
- Conditioning, to the extent required, excavated sediment to reduce moisture and allow off-site transport and disposal.
- Restoring the river bed with treatment media (i.e., oleophillic clay) and armoring while maintaining a zero net fill.
- Restoring the southern river bank with select clean fill.

Depth to water at monitoring well ENV-8MW was measured at 4.05 feet below ground surface, as documented during groundwater sampling on May 25, 2017. The proposed discharge location for treated groundwater is an outfall (Outfall A) to the Neponset River, as depicted on **Figure 2**. The approximate latitude and longitude of the discharge (outfall) point are:

- Latitude: 42°10'8.87"
- Longitude: -71°12'21.19"

The dewatering and treatment system anticipated for this work includes a 20,000-gallon baffled fractionation tank, sediment bag filters, and two activated carbon filter vessels for remaining contaminant removal. This system is designed to meet the required effluent limits for this permit. A diagram of the treatment system is provided on **Figure 5**.

Only one discharge point, described above, will be necessary for dewatering activities. Based on the depth to water, the extent of the remediation activities, and the system design, the estimated maximum daily flowrate is 100 gallons per minute (gpm), with an average daily flow rate of 50 gpm (36,000 gpd). The pH of onsite groundwater was measured at 8.3 (s.u.) and site activities are not anticipated to alter this pH. Discharge activities will only occur during site remediation, which is expected to occur between October 2017 and July 2018. The discharge point for these dewatering activities is not within an Area of Critical Environmental Concern (ACEC). Areas of Concern in relation to the facility are presented on **Figure 3**. **Figure 4** provides a MassDEP BWSC Receptor Map

[1] Prior to removing the impacted sediments, the contractor must decide whether to remove the sediments in either the "dry" or "wet". Removing the impacted in the "dry", the contractor may construct a temporary river diversion system that includes (a) upstream and downstream temporary dams, and (b) a pumping and conveyance system. This temporary system is intended to create a dry work zone by temporarily diverting surface water away from work areas. The contractor may also choose to remove the impacted sediments in the "wet" isolating the work zones using temporary dams. Means and methods for removing the impacted sediments, and the type of stream diversion measures, will be determined by the selected contractor in consultation with the Owner.

identifying potential environmental receptors within a 500 foot and ½ mile radius from the disposal site.

If needed, modifications to the system will be made. Modifications to the system will be submitted for approval via a Notice of Change (NOC).

3.1 Receiving Water Information

The receiving water for the indirect discharge of groundwater from the facility is the Neponset River, which empties into the Boston Harbor. Based on an existing facility NPDES individual permit[2], it was determined that the 7Q10 of the Neponset River at the site is 4.5 cubic feet per second (cfs). The StreamStats data from this portion of the Neponset River was unavailable. Receiving water data collected on site is provided in **Attachment B**.

Per the Waterbody Assessment and TMDL Status Map (**Figure 3**), the Neponset River is listed as a Category 5 impaired or threatened water body.

3.2 Receiving Water Classification

The Neponset River is classified as Class B.

4. CONTAMINANT INFORMATION

On May 25, 2017, groundwater samples were collected from on-site monitoring well ENV-8MW. Groundwater samples collected were submitted to Alpha Analytical Laboratories, Westborough, Massachusetts (Alpha) for analysis of volatile organic compounds (VOCS) limited to benzene, toluene, ethylbenzene, and xylene (BTEX) by EPA method 8260; polycyclic aromatic hydrocarbons (PAHs) by EPA method 8270; total petroleum hydrocarbons (TPH) by method 1664; Chloride by EPA method 300; total suspended solids (TSS) by method SIM 2540; arsenic, chromium, and lead by EPA method 200.8; iron by EPA method 200.7; hexavalent chromium by EPA method 7196. The analytes were selected based upon historical analytical data from the site or were required under the RGP. Chloride and iron were detected at concentrations of 430 mg/L and 0.344 mg/L, respectively. All other analytes were not detected.

Groundwater laboratory analytical reports are provided in **Attachment C**.

5. DILUTION FACTOR

A dilution factor is not being applied to effluent calculations.

6. DETERMINATION OF ENDANGERED SPECIES ACT ELIGIBILITY (ESA)

The United States Department of the Interior Fish and Wildlife Service – New England Ecological Services Field Office was contacted regarding the determination of endangered species act eligibility

[2] NPDES Permit No. MA0003531 for discharge of treated industrial wastewater to the Neponset River, signed January 13, 2015.

(ESA). There are no endangered or candidate species and no critical habitats within the project area for this NOI. Therefore, this ESA determination is FWS Criterion A. Mapping (IPaC) regarding the Fish and Wildlife species is located in **Attachment D**.

7. DOCUMENTATION OF NATIONAL HISTORIC PRESERVATION ACT (NHPA) REQUIREMENTS

Listings of historic places within the Town of Norwood were obtained from the Massachusetts Cultural Resources Information System (MARCIS) online database and the National Register of Historic Places (HRHP) databases:

- http://mhc-macris.net/Towns.aspx?Page=towns.asp.
- https://www.nps.gov/maps/full.html?mapId=7ad17cc9-b808-4ff8-a2f9-a99909164466

A copy of the National Historic Landmarks (NHL) inventory spreadsheet was also obtained. A copy of the MARCIS NRHP, and NHL reports are provided in **Attachment E**. No historic places are located on site.

8. SUPPLEMENTAL INFORMATION

At this time no additional supplemental information is necessary to meet the requirements of the NOI for the RGP.

9. REMEDIATION CONSTRUCTION SCHEDULE

Remediation activities requiring dewatering are anticipated to begin in October 2017, and are anticipated to be complete by July 2018.

Attachment 7: Metals Analysis

Hardness Analysis[1]

Hardness data used to calculate hardness-dependent metals criteria are from the Facility's Whole Effluent Toxicity (WET) test reports from 2010 through 2013. The hardness values used in calculations below are the median hardness values measured in the Facility's discharge and the Neponset River immediately upstream of the discharge.

Summary of Hardness Data

Monitoring Period End Date	Effluent Hardness (mg/L)[2]	Upstream Hardness (mg/L)
May 31, 2010	25.5	
August 31, 2010	20.5	
May 31, 2011	19	52
August 31, 2011	23	79
May 31, 2012	22	48
August 31, 2012	23	65
May 31, 2013	29	65
August 31, 2013	28	55

EPA determined the estimated downstream hardness used to calculate the criteria as follows:

$$C_r = \frac{Q_d C_d + Q_s C_s}{Q_r}$$

Where:

C_r	=	Concentration below outfall
Q_d	=	Discharge flow
C_d	=	Discharge concentration
Q_s	=	Upstream flow (i.e., 7Q10)
C_s	=	Upstream concentration
Q_r	=	Streamflow below outfall (effluent + upstream)

Therefore:

$$C_r = \frac{(0.04 \text{ MGD} \times 23 \text{ mg/L}) + (2.15 \text{ MGD} \times 60 \text{ mg/L})}{2.19 \text{ MGD}} = \mathbf{59.3 \text{ mg/L}}$$

Freshwater Metals Criteria[3,4]

Using the estimated downstream hardness value of 59.3 mg/L and a conversion factor to convert dissolved to total recoverable metals, EPA determined the chronic and acute criteria for metals as follows:

---

[1] For the mixing equation used to determine estimated downstream concentrations, see *Technical Support Document for Water Quality-based Toxics Control:* EPA/505/2-90-001, 1991.

[2] Effluent hardness for 2010 estimated using the following calculation: mg/L $CaCo_3$ = 2.497 (Ca concentration in mg/L) + 4.118 (Mg concentration in mg/L).

[3] For hardness-dependent criteria, see *National Recommended Water Quality Criteria, Appendix B - Parameters for Calculating Freshwater Dissolved Metals Criteria That Are Hardness-Dependent*: http://water.epa.gov/scitech/swguidance/standards/criteria/current/index.cfm

[4] 314 CMR 4.05(5)(e) requires that "permit limits will be written in terms of total recoverable metals." Dissolved metal criteria have been converted to total recoverable metals, See *Appendix A - Conversion Factors for Dissolved Metals*: http://water.epa.gov/scitech/swguidance/standards/criteria/current/index.cfm#appendxa

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Project Number:	3340006D US06	**Report Date:**	05/31/17

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance

Project Name: RGP

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 et seq.).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 et seq.), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the

human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

New England Ecological Services Field Office

Counties: Norfolk, MA

Endangered Species Act Species

There is a total of 0 threatened, endangered, or candidate species on your species list. Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species. See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area. Please contact the designated FWS office if you have questions.

Critical habitats

There are no critical habitats within your project area.
