Thank you Danielle. We have reached out to Enercon to review the request. With your email we will add this second report to the discussion. I will update you after our discussion and the review of the reports is complete.

Stay tuned.

Lynn

Hi Lynn –

It has come to my attention that there is a second Enercon report labeled CBI that was provided to EPA on June 21, 2021 titled “Wedgewire Screens: Additional Design for Maintenance Platform Configuration.” If you are meeting to discuss redacting the Enercon 2020 report I was hoping you would also consider a redaction of this report.

Thanks!

Danielle

Good Morning. Understood and thank you for reaching out regarding the Enercon 2020 Study’s CBI designation. I will review the document and discuss internally with our team. I will be able to better respond once that review is complete. I should be back in touch early next week.

Thanks again. Lynn

Subject: GSP Wedgewire Screen Study

Good Morning Lynn –

I hope you are well. We have received several requests for the Enercon 2020 Study titled “*Wedgewire Screen Site-Specific Study Engineering Evaluation*” that presents the results of the 2019 pilot study GSP conducted under the 2018 permit. The report is labeled “CBI” in its entirety and EPA has not released it. However, it would be helpful if we could obtain a redacted copy of this report given the multiple requests and because the report is part of the Administrative Record for the modification. Would that be something GSP is willing to provide?

Thank you!
Danielle
