Part II. Self-Assessment

The Town of Hopkinton has completed the required self-assessment and has determined that our municipality is in compliance with all permit conditions, except for the following provision:

Part II.B.8 As a component of the SWMP the Town will incorporate the nine standards of the Massachusetts Department of Environmental Protection's (DEP) Stormwater Policy into the Town's site plan review requirements. The DEP's nine standards have already been incorporated into Subsection 8.4 (Design Standards Section 8) of the Town's Rules and Regulations Relating to the Subdivision of Land. Standard three of the DEP's policy indicates that,

"Loss of annual recharge to groundwater should be minimized through the use of infiltration measures to the maximum extent practicable. The annual recharge from the post-development site should approximate the annual recharge from the pre-development site or existing site conditions, based on soil type."

Groundwater recharge is often overlooked as a method of mitigating stormwater discharges from developments. Inclusion of the nine standards in the Town's regulatory requirements will call for project proponents to thoroughly explore options for groundwater recharge and include them in their stormwater management plan.

Currently, the Town of Hopkinton is finalizing its Comprehensive Wastewater Management Plan which has evaluated the potential of groundwater recharge with treated wastewater effluent to help mitigate the stressed basin condition.
