SUBJECT: Annual Report of Phase II General Permit Activities at Otis Air National Guard Base for Permit Year 02.

1. In accordance with the provisions of the National Pollutants Discharge Elimination System (NPDES) General Permit for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4) the annual reporting requirements are submitted herewith. To view the Otis ANGB Storm Water Management Plan please reference the Notice of Intent provided for the Phase II Permit Application on 19 June 2003, NPDES Permit #MAR05B902.

   Owner/Operator Information:
   Name: 102nd Fighter Wing
   Address: 197 Granville Ave, Box 46
   Otis ANG Base, MA 02542-1330
   NPDES PERMIT #: ~~MAR05B902~~

2. The 102nd has maintained compliance with conditions set forth in the permit. The Self Audit Checklist is included as Attachment 1. Each measurable goal required in permit years one and two has been addressed and is current or in progress. Newly implemented BMPs for each of the six minimum control measures as identified by our permit are underway. The new BMPs for Permit Year 2 are included in Attachment 2. The progress toward achieving measurable goals including resulting data that has been collected or analyzed is identified below:

   BMP 1A, Trash Management:
   - A preventative maintenance instruction for cleaning/maintenance at control structure twice annually has been included in our Water Management Plan.
   - Storm drainage area outfalls and structural BMP are scheduled for necessary maintenance or cleaning upon result of inspection. Drainage Area Dry Weather Visual Monitoring and Trash Management Inspections are conducted quarterly. Results of inspection are included as Attachment 3.
   - As a preventative maintenance an additional instruction for cleaning catch basins has been included. A map identifying locations of catch basins has been obtained and accumulated debris has been scheduled for removal by an outside contractor in May of 2005.

- Employee walks are conducted on a regular basis to collect loose trash and debris on our airfield. The quantity of material collected on these walks is included as Attachment 4.

BMP 1B, Storm Water Education Materials

- A public outreach statement on stormwater pollution prevention and proper trash management is published annually in the spring issue of the Otis Notice and Seagull.
- A public outreach statement on stormwater pollution prevention will be included in the 2004 Water Quality Report.
- The EPA video *After The Storm* aired quarterly on our local television station.

BMP 1D, Education /Outreach for Commercial Activities

- A quarterly inspection checklist to verify that personnel keep dumpsters closed has been developed and will be implemented for Permit Year 3. The Dumpster Inspection is conducted along side our Hazardous Waste Satellite Accumulation Point Inspections. A copy of the checklist is enclosed at Attachment 4.

BMP 2B, Storm Drain Stenciling

- On June 19, 2004, eight Members of a local Boy Scout troop stenciled twenty-five storm drains on our four main roads within the Industrial Gate of the 102nd Fighter Wing. The boy scouts are scheduled to return this June to complete the few other roads with in the industrial gate.

BMP 3A, ID/Elimination

- Dry weather field screening was implemented during Permit Year 1 and continues to date on a quarterly basis. Results from the inspection are identified in Attachment 3.
- An ordinance for new construction connecting to the sanitary sewer was published in our Water Management Plan and distributed to all pertinent entities. The Lox facility was the only facility constructed in Permit Year 2. The facility did not require a connection to the sanitary sewer.
- Results for periodic camera inspections are included as Attachment 6. Additional inspections are expected in summer/fall of 2005.

BMP 4A, Good Housekeeping

- In Permit Year 2, four reportable spill occurred and 161 personnel were trained in spill response and storm water pollution prevention. Descriptions of the spills are listed in Attachment 7.

BMP 4B, Runoff Control

- An ordinance for contractors to implement runoff control measures was written into the Contract Boilerplate for construction activities. Documentation of BMP will begin with the Construction of the New Base Fire Crash/Rescue Station, which broke ground on 23 April 2005.

BMP 4C, Erosion Control

- An ordinance for contractors to implement erosion control measures was written into the Contract Boilerplate for construction activities. Documentation of BMP will begin with the Construction of the New Base Fire Crash/Rescue Station, which broke ground on 23 April 2005.

BMP 5A, Ordinance for Post-Construction Runoff

- The 102 FW has pursued goals of footprint consolidation and facility modernization for the past decade, and will continue to due so until every building is logically located and can support a modern, efficient and environmentally sound mission. Long-term reduction of the Base's footprint through facility consolidation and custodial vigilance is the ultimate goal. *Otis 2000* is the road map that will be used to see this goal to fruition. The reduction of impervious surface is tracked in acres and is included in Attachment 6.

BMP 5B, BMP Inspection/Maintenance

- An ordinance for contractors to conduct post-construction maintenance of permanent BMPs was written into the Contract Boilerplate for construction activities. Documentation of BMP will begin with the Construction of the New Base Fire Crash/Rescue Station, which broke ground on 23 April 2005.

BMP 6A, Illegal Dumping Control

- Articles to enhance employee awareness on the impacts of illegal dumping were published in the in the December 2004 issue of the Otis Notice and the Seagull.

BMP 6B, Roadway Maintenance

- Pollution Prevention Training to enhance employee awareness on sand/salt application is included in the Storm Water Pollution Prevention Training as addressed in BMP 4A.
- As discussed in the Annual Report submitted for Permit Year 1, the sand/salt spreaders cannot be calibrated. Deicing material is always applied in minimal quantities. The quantity of deicing material used is tracked in Attachment 6.

BMP 6C, Good Housekeeping

- For documentation of reportable spill and number of personnel trained please see BMP 4A, Good Housekeeping.

BMP 6D, Parking Lot/Street Cleaning

- A preventative maintenance instruction manual and schedule for extra cleaning during spring was included in our Water Management Plan.

BMP 6G, Storm Drain System Cleaning

- A regular cleaning program has been established and included in our Water Management Plan. Locations and results of cleaning will be included in the Annual Report for Permit Year 3.

3. Otis Air National Guard Base has made excellent advancement toward achieving measurable goals. All measurable goals designated for Permit Years 1 and 2 has been address, are current and in progress. Additionally, a few measurable goals for Permit Year three are also underway. The BMPs chosen for implementation have been appropriately selected. The one minor exception is our inability to accurately calibrate sand and salt spreaders on our roads and grounds equipment. However, the 102nd will accurately monitor the amount of sand spread in winter months.

4. Table 1 summarizes the Storm Water Management Plan Activities for 2005/2006 (Permit Year 3). Please refer to the Notice of Intent for the Phase II Permit Application on 19 June 2003, NPDES Permit #MAR05B902 for description of the Storm Water Management Plan Activities scheduled for the years to follow.

BMP ID #	ACTION	MEASURABLE GOAL	STATUS
1C P2 Programs	Create educational pamphlets/fliers, displays	Track number of articles/materials created and distributed	In Progress
1D Education/Outreach For Commercial Activities	Conduct quarterly inspections to verify that personnel keep dumpsters closed	Compile list of dates/locations and actions taken to ensure compliance	In Progress
3C ID Illicit Discharge Connections	Develop list of priority buildings for inspection/survey	Compile list of buildings inspected and results of inspections	In Progress
4C Erosion Control	Develop Ordinance for contractors to implement erosion control measures	Document BMPs installed, frequency of inspections, results, maintenance activities and analyze failure rate	In Progress
5B BMP Inspection/ Maintenance	Develop inspection program; develop ordinance for contractors to conduct post-construction maintenance of permanent BMPs	Conduct analysis of BMPs; track installed BMPs effectiveness and remediation of identified problems	In Progress
6G Storm Drain System Cleaning	Establish regular Cleaning Program	Compile list of areas cleaned, quantity of materials collected and dated scheduled/conducted	In Progress

Table1. Activities Planned for Permit Year 3

5. All storm water monitoring and analytical data obtain throughout Permit Year Two is included as Attachment 8.

6. All relevant issues have been adequately addressed in this Annual Comprehensive Compliance Evaluation.

If you have any questions or require additional information, please contact Elizabeth Mascia of the Environmental Management Office at 508/968-4327 or the undersigned at 508/968-4844

Sincerely,

Christopher M. Faux, LtCol, MAANG, BSC
Environmental Management Officer

Storm Water Phase II Program
Permit Year 2 Calendar Year 2004/2005 Date: 27 April 2005

Annual Self Audit	YES	NO	N/A
1. Is the 102nd Fighter Wing in compliance with 40 CFR 122?	X		
2. Does the 102FW maintain a current Storm Water Pollution Prevention Plan?	X		
3. Is the 102FW in compliance with the conditions set forth in the NPDES General Permit for MS4's. Permit Number MAR04023/MADEP?	X		
4. Has the 102FW had any incidents of non-compliance with the permit?		X	
5. Has the 102FW filed an eNOI for all construction projects which disturbed >1 acre?	X		
6. Has the 102Fw addressed/implemented all new Minimum Control Measure for the current permit year?	X		
7. Has the 102FW addressed/implemented all new actions and measurable goals for Public Education Outreach in the current permit year?	X		
8. Has the 102FW addressed/implemented all new actions and measurable goals for Public Participation Involvement in the current permit year?	X		
9. Has the 102FW addressed/implemented all new actions and measurable goals for Illicit Discharge Detection/Elimination in the current permit year?	X		
10. Has the 102FW addressed/implemented all new actions and measurable goals for Construction Site Runoff Control in the current permit year?	X		
11. Has the 102FW addressed/implemented all new action and measurable goals for Post Construction Runoff Control in the current permit year?	X		
12. Has the 102FW addressed/implemented all new actions and measurable goals for Pollution Prevention/Good Housekeeping in the current permit year?	X		
13. Has the 102FW addressed/implemented all new actions and measurable goals in on schedule with the Storm Water Management Program Time Frames		X	
14. Has the 102FW addressed/implemented all reoccurring Minimum Control Measures in the current permit year?	X		
15. Does the Storm Water Pollution Prevention Team meet on an annual basis to discuss the progress of the Phase II Program?	X		
16. Has an annual report been submitted to the EPA and DEP for the previous permit year?	X		

Storm Water Management Control Measures for Permit Year 2

BMP ID #	ACTION	MEASURABLE GOAL	STATUS
1A Trash Management	Establish preventative maintenance instruction for cleaning/maintenance at control structure twice annually	Compile list of grates cleaned, quantity of material collected and dates preventative maintenance took place	Current & In Progress
	Conduct quarterly inspections to verify proper trash management practices are in use	Compile list of dates and areas inspected and actions taken to address non-compliance	Current & In Progress
2B Storm Drain Stenciling	Enlist volunteers from outside agencies (e.g. Boy Scouts) to stencil drains	Track number of volunteers and number of storm drains stenciled	Current & In Progress
3A ID/Elimination	Develop ordinance for new construction connecting to sanitary sewer	Publish/distribute ordinance; track number of buildings constructed	Current & In Progress
3C ID Illicit Connections	Develop ordinance for new construction	Publish/distribute ordinance; track number of buildings constructed	Current & In Progress
4B Runoff Control	Develop ordinance for contractors to implement runoff control measures	Document BMPs installed, frequency of inspections and results, maintenance activities and analyze BMP failure rate for future consideration; document/implement BMPs which help to preserve pervious areas	Current & In Progress
5A Ordinance for post-Construction Runoff	Develop pavement reduction plan	Track acreage reduction of impervious surface	Current & In Progress
6D Parking Lot/Street Cleaning	Establish preventative maintenance instruction for extra cleaning during spring snow melt; establish schedule	Document instruction manual and schedule	Current

Dry Weather Visual Monitoring of Drainage Areas Log and Trash Management Inspection

Date	Location	Results of Inspection	Additional Comments
30 March 2005	SD-1	Satisfactory	Picked up loose garbage
30 March 2005	SD-3	Satisfactory	Picked up loose garbage
30 March 2005	SD-4	Disruptive vegetative growth and old booms present – request for removal submitted.	Picked up loose garbage
5 October 2004	SD-1	Satisfactory	Picked up loose garbage
5 October 2005	SD-3	Disruptive vegetative growth present – request for removal submitted.	No loose garbage or waste material present.
5 Oct 2004	SD-4	Build up of leaves and debris clogging drainage area – request for removal submitted.	No loose garbage or waste material present.
19 April 2004	SD-1	Disruptive vegetative growth present – request for removal submitted.	No loose garbage or waste material present.
19 April 2004	SD-3	Disruptive vegetative growth present – request for removal submitted.	No loose garbage or waste material present.

Hazardous Waste Satellite Accumulation Point Checklist

No.	Location of Inspection Bldg. # Name of S.A.P. Date Inspection Completed:	Yes	No	Comments
1	Verify that only one container for each specific waste is in use at any one time and that the maximum capacity of the container is 55 gallons. (310 CMR 30.340(4)(c)			
2	Verify that containers are transferred to the 90 day accumulation point within 3 days of becoming full. (310 CMR 30.340(4)(d)			
3	Verify that containers are stored on a surface that is free of cracks and gaps and is sufficiently impervious to contain leaks and spills until the material can be detected and removed. (N.B. Verify that a spill or leak of liquid cannot reach a floor drain.)(310 CMR 30.340(1)(f)			
4	Verify that the side of each container of hazardous waste is clearly and correctly labeled and marked with the following information: * The words "Hazardous Waste" * The names of the waste in the container (e.g. acetone, toluene) * The hazard(s) associated with the waste (e.g. ignitable, toxic, dangerous when wet.) (310 CMR 30.682)			
5	If a container holding hazardous waste is not in good condition (e.g. severe rusting, apparent structural defects) or if it begins to leak, that the owner transfers the hazardous waste to a container in good condition. (310 CMR 30.683)			
6	Verify that containers of hazardous waste are always kept closed except when wastes are being added or removed. (310 CMR 30.685(1)			
7	Verify that containers of hazardous waste are not opened, handled or stored or stacked in a manner, which may rupture the containers or cause them to leak. (310 CMR 30.685(2)			
8	Verify that at least weekly, the manager of the satellite accumulation point inspects the SAP (310 CMR 30.686) and the inspection records are readily available and maintained for at least 3 years or closure of the SAP which ever is longer. (310 CMR 30.515(1)(c)			
9	Verify that each satellite accumulation point is signed as follows: "HAZARDOUS WASTE SATELLITE ACCUMULATION POINT" (BMP)			
10	Verify that the names of the accumulation point manager and alternates are posted at the site. (BMP)			
11	Dumpster Checks * Is the cover closed? * Is trash laying around outside of dumpster? * Ensure waste in container is solid waste. (not hazardous, cardboard, etc.) * Ensure dumpster is not leaking. (40 CFR 122)			
12	Inspector's name

Reportable Quantity Spill Log for Permit Year 2

Spill Time / Date: ~2030 hrs/ 1 May 2004
Quantity / Fluid: ~50 gallons / JP-8 Jet Fuel
Location: Echo "E" Row on Aircraft Ramp Cause of Incident: Internal Fuel System Failure. Cause under investigation. MEMA POC: Dispatcher Anderson at 2121hrs NRC POC: Petty Officer Layman at 2124 hrs. NRC Report Number: 720 469 DEP POC: Mr. Bob Murphy at 2130hrs. Informed us LSP required. DEP Tracking Number: RTN 4-18405 EPA POC: Mr. Randy Rice at 2151hrs. Action falls w/in purview of MA Response: Immediately, called MEMA, NRC, DEP, EPA Aircraft immediately defueled removing 1450 gal of possible 1500 gal Fuel contained using boom/socks. Absorbents collected pooled fuel. Used absorbents moved to Hazwaste Accumulation Area

Spill Time / Date: 1300 hrs/ 28 June 2004
Quantity / Fluid: ~15-20gallons / JP-8 Jet Fuel
Location: Parking Apron Spot Charlie 3 Cause of Incident: Centerline fuel valve failure during refuel MEMA POC: NRC POC: Ms. Johnson NRC Report Number: 726497 DEP POC: Mr. Mike Whiteside DEP Tracking Number: RTN 4-18514 Clean Harbor POC: Lisa McNeil and Jennifer Smith, LSP Response: Immediately, called DEP, NRC, Clean Harbors and Notified M. Jabbur at HQ Release contained and cleaned with absorbents Absorbents drummed and moved to Hazwaste Accumulation Area

Spill Time / Date: 1000 hrs/ 22 January 2005
Quantity / Fluid: 100 gallons / JP-8 Jet Fuel
Location: Engine Test Cell (Hush House) Cause of Incident: Venting from both wings MEMA POC: Dispatcher Anderson NRC POC: Ms. Johnson NRC Report Number: 747928 DEP POC: Mr. Harahan DEP Tracking Number: none required Response: Immediately, reported to NRC and MEMA who contacted DEP Release contained in system designed to catch spills. No further action required

Reportable Quantity Spill Log for Permit Year 2, continued

Spill Time / Date: 1310 hrs/ 22 March 2005
Quantity / Fluid: ~13 gallons / Hydraulic Fluid
Location: Parking Apron Spot D-8 Cause of Incident: internal failure of pressurized line in hydraulic mule MEMA POC: NRC POC: Ms. Jones NRC Report Number: 753418 DEP POC: Mr. Mike Moran DEP Tracking Number: RTN 4-18973 Clean Harbor POC: Mr. Dana Simpson and Jennifer Smith, LSP Response: Immediately, called DEP, NRC, Clean Harbors and Notified ANG/CEV Hqrts. Release contained and cleaned with absorbents Absorbents drummed and moved to Hazwaste Accumulation Area

LABORATORY REPORT

Project: **Work Item #4**
Lab ID: **82298**
Received: **03-29-05**

Dear Rose:

Enclosed are the analytical results for the above referenced project. The project was processed for Standard turnaround.

This letter authorizes the release of the analytical results, and should be considered a part of this report. This report contains a sample receipt report detailing the samples received, a project narrative indicating project changes and non-conformances, a quality control report, and a statement of our state certifications.

The analytical results contained in this report meet all applicable NELAC standards, except as may be specifically noted, or described in the project narrative. This report may only be used or reproduced in its entirety.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Should you have any questions concerning this report, please do not hesitate to contact me.

Sincerely,

Eric H. Jensen
Operations Manager

Project Narrative

Project:	**Work Item #4**	Lab ID:	**82298**
Client:	**Otis 102nd Fighter Wing/Environmental Management**	Received:	**03-29-05 15:30**

A. Documentation and Client Communication

The following documentation discrepancies, and client changes or amendments were noted for this project:

1. Analysis for Herbicides was cancelled, as discussed with Rose Ware, 03-31-05.

B. Method Modifications, Non-Conformances and Observations

The sample(s) in this project were analyzed by the references analytical method(s), and no method modifications, non-conformances or analytical issues were noted, except as indicated below:

1. No method modifications, non-conformances or analytical issues were noted.

. Work Item (4) Storm Water Drainage Swales

(a) Four areas (surface water) four times per year for one year. Analyze samples for:

(1) Total Suspended Solids
(2) Total Phosphorous
(3) Total Kjeldahl Nitrogen
(4) Total Copper
(5) Total Zinc
(6) Total Lead
(7) TPH – Diesel Range Organics
(8) Regulated/Unregulated Volatile Organic Compounds via EPA Method 8260
(9) Ethylene Glycol (SARA III)
(10) COD
(11) BOD(5)
(12) Nitrate + Nitrite Nitrogen
(13) Ammonia
(14) pH
(15) Herbicides
(16) Total Arsenic
(17) Total Barium
(18) Total Cadmium
(19) Total Chromium
(20) Total Manganese
(21) Total Mercury
(22) Total Nickel
(23) Total Selenium
(24) Total Silver

(b) Four areas (surface water) four times per year for one year. Analyze samples for:

(1) Fecal Coliform

NOTE: Sampling will be conducted by government personnel once per quarter of a year for a storm event producing rainfall greater thatn 0.1 inch in magnitude. For this reason timely submittal of samples for analysis will vary.

GROUNDWATER ANALYTICAL

Quality Assurance/Quality Control

A. Program Overview

Groundwater Analytical conducts an active Quality Assurance program to ensure the production of high quality, valid data. This program closely follows the guidance provided by *Interim Guidelines and Specifications for Preparing Quality Assurance Project Plans,* US EPA QAMS-005/80 (1980), and *Test Methods for Evaluating Solid Waste,* US EPA, SW-846, Update III (1996).

Quality Control protocols include written Standard Operating Procedures (SOPs) developed for each analytical method. SOPs are derived from US EPA methodologies and other established references. Standards are prepared from commercially obtained reference materials of certified purity, and documented for traceability.

Quality Assessment protocols for most organic analyses include a minimum of one laboratory control sample, one method blank, one matrix spike sample, and one sample duplicate for each sample preparation batch. All samples, standards, blanks, laboratory control samples, matrix spikes and sample duplicates are spiked with internal standards and surrogate compounds. All instrument sequences begin with an initial calibration verification standard and a blank; and excepting GC/MS sequences, all sequences close with a continuing calibration standard. GC/MS systems are tuned to appropriate ion abundance criteria daily, or for each 12 hour operating period, whichever is more frequent.

Quality Assessment protocols for most inorganic analyses include a minimum of one laboratory control sample, one method blank, one matrix spike sample, and one sample duplicate for each sample preparation batch. Standard curves are derived from one reagent blank and four concentration levels. Curve validity is verified by standard recoveries within plus or minus ten percent of the curve.

B. Definitions

Batches are used as the basic unit for Quality Assessment. A Batch is defined as twenty or fewer samples of the same matrix which are prepared together for the same analysis, using the same lots of reagents and the same techniques or manipulations, all within the same continuum of time, up to but not exceeding 24 hours.

Laboratory Control Samples are used to assess the accuracy of the analytical method. A Laboratory Control Sample consists of reagent water or sodium sulfate spiked with a group of target analytes representative of the method analytes. Accuracy is defined as the degree of agreement of the measured value with the true or expected value. Percent Recoveries for the Laboratory Control Samples are calculated to assess accuracy.

Method Blanks are used to assess the level of contamination present in the analytical system. Method Blanks consist of reagent water or an aliquot of sodium sulfate. Method Blanks are taken through all the appropriate steps of an analytical method. Sample data reported is not corrected for blank contamination.

Surrogate Compounds are used to assess the effectiveness of an analytical method in dealing with each sample matrix. Surrogate Compounds are organic compounds which are similar to the target analytes of interest in chemical behavior, but which are not normally found in environmental samples. Percent Recoveries are calculated for each Surrogate Compound.

Method Reference: Test Methods for Evaluating Solid Waste, US EPA, SW-846, Third Edition, Update III (1996). Sample preparation performed by EPA Method 5030B.

Report Notations: All calculations performed prior to rounding. Quality Control Limits are defined by the methodology, or alternatively based upon the historical average recovery plus or minus three standard deviation units.

LABORATORY REPORT

Project: **Work Item 4A + 4B**
Lab ID: **76188**
Received: **08-31-04**

Dear Rose:

Enclosed are the analytical results for the above referenced project. The project was processed for Standard turnaround.

This letter authorizes the release of the analytical results, and should be considered a part of this report. This report contains a sample receipt report detailing the samples received, a project narrative indicating project changes and non-conformances, a quality control report, and a statement of our state certifications.

The analytical results contained in this report meet all applicable NELAC standards, except as may be specifically noted, or described in the project narrative. This report may only be used or reproduced in its entirety.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Should you have any questions concerning this report, please do not hesitate to contact me.

Sincerely,

Eric H. Jensen
Operations Manager

Diesel Range Organics	BRL		mg/L	0.2

QC Surrogate Compound	Spiked	Measured	Recovery	QC Limits
ortho-Terphenyl	0.044	0.041	93 %	60 - 140 %

Method Reference: Test Methods for Evaluating Solid Waste, US EPA, SW-846, Third Edition, Update III (1996). Diesel range organics quantified in the range n-C 10 through n-C 28. Method modified to quantify results on the basis of a series of aromatic and aliphatic hydrocarbons, using 5-alpha-androstane as an internal standard. Sample extraction performed by EPA 3510C.

Report Notations: BRL Indicates concentration, if any, is below reporting limit for analyte. Reporting limit is the lowest concentration that can be reliably quantified under routine laboratory operating conditions. Reporting limits are adjusted for sample size and dilution.

Method Reference: Methods for Chemical Analysis of Water and Wastes, US EPA, EPA-600/4-790-020 (Revised 1983), and Methods for the Determination of Inorganic Substances in Environmental Samples, US EPA, EPA/600/R-93/100 (1993), and Standard Methods for the Examination of Water and Wastewater, APHA, Twentieth Edition (1998), and Test Methods for Evaluating Solid Waste, US EPA, SW-846, Third Edition, Update III (1996).

Report Notations:

BRL Indicates concentration, if any, is below reporting limit for analyte. Reporting limit is the lowest concentration that can be reliably quantified under routine laboratory operating conditions. Reporting limits are adjusted for sample size and dilution.

ND Not detected in comparison to the reported detection limit.

Please note that all solid samples are reported on dry weight basis unless noted otherwise.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

Project Narrative

Project:	**Work Item 4A + 4B**	Lab ID:	**76188**
Client:	**Otis 102nd Fighter Wing/Environmental Management**	Received:	**08-31-04 15:50**

A. Documentation and Client Communication

The following documentation discrepancies, and client changes or amendments were noted for this project:

1. No documentation discrepancies, changes, or amendments were noted.

B. Method Modifications, Non-Conformances and Observations

The sample(s) in this project were analyzed by the references analytical method(s), and no method modifications, non-conformances or analytical issues were noted, except as indicated below:

1. Project Non-conformance. Project 76188 was received at a temperature of 6.7'C. This measurement is outside the recommended range of 2-6'C.
2. EPA 8151A Non-conformance: The Laboratory Control sample had analyte Dalapon and Dinoseb below recommended recovery limits for QC batch HB-0270-F.

GROUNDWATER ANALYTICAL

Quality Assurance/Quality Control

A. Program Overview

Groundwater Analytical conducts an active Quality Assurance program to ensure the production of high quality, valid data. This program closely follows the guidance provided by *Interim Guidelines and Specifications for Preparing Quality Assurance Project Plans,* US EPA QAMS-005/80 (1980), and *Test Methods for Evaluating Solid Waste,* US EPA, SW-846, Update III (1996).

Quality Control protocols include written Standard Operating Procedures (SOPs) developed for each analytical method. SOPs are derived from US EPA methodologies and other established references. Standards are prepared from commercially obtained reference materials of certified purity, and documented for traceability.

Quality Assessment protocols for most organic analyses include a minimum of one laboratory control sample, one method blank, one matrix spike sample, and one sample duplicate for each sample preparation batch. All samples, standards, blanks, laboratory control samples, matrix spikes and sample duplicates are spiked with internal standards and surrogate compounds. All instrument sequences begin with an initial calibration verification standard and a blank; and excepting GC/MS sequences, all sequences close with a continuing calibration standard. GC/MS systems are tuned to appropriate ion abundance criteria daily, or for each 12 hour operating period, whichever is more frequent.

Quality Assessment protocols for most inorganic analyses include a minimum of one laboratory control sample, one method blank, one matrix spike sample, and one sample duplicate for each sample preparation batch. Standard curves are derived from one reagent blank and four concentration levels. Curve validity is verified by standard recoveries within plus or minus ten percent of the curve.

B. Definitions

Batches are used as the basic unit for Quality Assessment. A Batch is defined as twenty or fewer samples of the same matrix which are prepared together for the same analysis, using the same lots of reagents and the same techniques or manipulations, all within the same continuum of time, up to but not exceeding 24 hours.

Laboratory Control Samples are used to assess the accuracy of the analytical method. A Laboratory Control Sample consists of reagent water or sodium sulfate spiked with a group of target analytes representative of the method analytes. Accuracy is defined as the degree of agreement of the measured value with the true or expected value. Percent Recoveries for the Laboratory Control Samples are calculated to assess accuracy.

Method Blanks are used to assess the level of contamination present in the analytical system. Method Blanks consist of reagent water or an aliquot of sodium sulfate. Method Blanks are taken through all the appropriate steps of an analytical method. Sample data reported is not corrected for blank contamination.

Surrogate Compounds are used to assess the effectiveness of an analytical method in dealing with each sample matrix. Surrogate Compounds are organic compounds which are similar to the target analytes of interest in chemical behavior, but which are not normally found in environmental samples. Percent Recoveries are calculated for each Surrogate Compound.
