Part IV. Summary of Information Collected and Analyzed

The Taunton River Watershed Alliance (TRWA) and Veolia Water collect water samples throughout the Taunton River Watershed through a collaborative monitoring project. There are three purposes for the monitoring: develop baseline characterization data, measure changes in the watershed over time, and screen for water quality problems. At the end of the year, a report titled Annual Water Quality Report – Taunton River & Tributaries – 2006 was completed to document the sampling activities and results.

For 2006, sampling was performed on the second Tuesday of the month from March through December. Sampling was not performed in January and February due to safety concerns from snow and ice on the bridges. In 2006, the sampling team tested nine sites. The sites were accessed from bridges due to safety considerations and accessibility for parking. These sites were chosen for several reasons including to cover a representative area of the City’s waterways, to include any known problem area or areas of critical concern, and to target areas where no previous water quality data existed. The following chart lists the monitoring locations for 2006.

STREET/BRIDGE LOCATION	RIVER	Miles from Taunton River	ID
