Part II. Self-Assessment

The Town of Falmouth has been moving forward with the NPDES Phase II requirements.

The Department of Public Works (D.P.W.) is currently in the process of a re-organization of operations, staffing and funding. An outside matrix report has been submitted and is currently being evaluated for inclusion with the D.P.W. re-organization process. Due to the present economy and funding, inclusion of recommendations from the matrix report will have a direct effect on NPDES compliance.

The Engineering department has a full-time engineering position that is in charge of implementing the Phase II requirements. Several programs have been developed and implemented which include:

1. A *"Catch Basin and Street Cleaning Program"* including:
 - A spreadsheet containing road lengths, number of catch basins, drop inlets, leach basins, piping, structure type, and condition.
 - Established drainage districts.
 - Overlay of drainage structures on town assessor maps.
 - Up-to-date maintenance, cleaning and sweeping schedule.
 - Amount of debris removed.
2. Full-time personnel dedicated to the catch basin cleaning truck.

Street cleaning is performed in the Spring after snow removal operations, maintenance during the summer months and in the Fall after the hurricane and nor'easter season. The Town currently owns two Elgin Pelican street cleaners.

3. The Town *"Driveway Permit"* has been modified to include NPDES stormwater requirements. The modified *"Driveway Permit"* includes:
 - Submittal of a site Plan depicting erosion and sedimentation control.
 - No driveway shall be constructed directing stormwater onto roadways.
 - Bonding ensuring all site work is constructed according to the driveway permit and attachments.

4. The engineering division currently has a list of drainage concerns. Each site is evaluated for repair (including best management practices (BMP's), water quality, and accessibility for maintenance.
5. Implementation of a Public Participation Program is anticipated to be in operation by the end of permit period #5.
6. The Mapping Program is nearly complete. The paper maps have been incorporated into the Town wide GIS mapping. During the Phase II permit period, the GIS personnel have located nearly all the Town maintained outlets with their GPS equipment. The engineering staff will need to locate some outlets not readily identified.

The Town received a copy of *“Massachusetts Estuaries Project –Nitrogen Loading thresholds for Great Pond, Green Pond, and Bourne Pond”*.

Regulatory and housekeeping issues are under construction and review.

Part III. Summary of Minimum Control Measures

1. Public Education and Outreach
