Title: Town of Cohasset Stormwater Agent

April 14, 2014

Part II. Self-Assessment

The required self-assessment has been completed, and it has been determined that the Town of Cohasset is in compliance with all the permit conditions.

The Town of Cohasset, Massachusetts, has a Stormwater Management Bylaw, and Stormwater Management Rules & Regulations, which were adopted by the Town of Cohasset in 2008. The Cohasset Stormwater Management Regulations became effective in January of 2009. The purpose of these stormwater management regulations, which are under the jurisdiction of the Cohasset Conservation Commission, is to protect downgradient wetland resource areas (coastal and freshwater wetlands), upland areas, adjacent and bordering properties, from increases in stormwater runoff impacts from impervious surface areas; and from negative water quality impacts associated with stormwater runoff from impervious surface areas. The Cohasset Conservation Commission requires the filing of complete stormwater permit applications, along with advertised public hearings, in order to properly review the stormwater applications, the proposed stormwater management designs, low impact development proposals, stormwater runoff management and mitigation, and to review the proposed best management practices for stormwater management of stormwater runoff. The Cohasset Stormwater Agent works for the Cohasset Conservation Commission, and is responsible for reviewing all stormwater management applications filed with the Town of Cohasset, and the Cohasset Conservation Commission. The Cohasset Stormwater Agent is responsible for any enforcement and compliance issues associated with the Cohasset Stormwater Management Rules & Regulations and Stormwater Management Bylaw. The Cohasset Stormwater Regulations are far more restrictive than the federal - EPA NPDES permit regulations, and the state - Massachusetts Department of Environmental Protection (DEP) stormwater regulations. The Cohasset Stormwater Management Rules & Regulations include the application review of proposed small projects which result in an increase of 500 square feet or greater of new impervious surface areas, and also any alteration of land which exceeds 5,000 sq.ft. The stormwater regulations include reviews for projects which result in increases of new stormwater runoff, the need for best management practices in the management, collection, and treatment of stormwater runoff volumes, within the Town of Cohasset. Best management practices are recommended for stormwater management of impervious surface areas for all proposed residential, commercial, and industrial projects within the Town of Cohasset, no matter what the size of the proposed project. The Cohasset Conservation Commission voted in December of 2011 to appoint Paul Shea, Independent Environmental Consultants, Inc., to act as the Stormwater Agent for the Town of Cohasset. Paul Shea is the current Stormwater Agent for the Town of Cohasset. Numerous stormwater permits have been issued by the Cohasset Conservation Commission under the local stormwater bylaw. These stormwater permits include designs which incorporate a variety of best management practices (BMPs), and Low Impact Development (LID) concepts, in order to

properly manage stormwater runoff, and potential stormwater impacts with associated water quality impacts, within the Town of Cohasset.

The Town of Cohasset has implemented numerous municipal stormwater management projects, in order to reduce the impacts from stormwater runoff, and water quality impacts to receiving wetland resource areas (freshwater and coastal wetland resource areas), within Cohasset. In 2013/2014, the Town of Cohasset completed a sewer replacement project at Jacobs Meadow, an extensive wetland resource area in Cohasset – freshwater wetlands, coastal wetlands, 100 year flood zone area, riverfront area – which is hydrologically connected to Cohasset Harbor (coastal/marine waters) by James Brook, perennial river, which flows through Jacobs Meadow, downgradient to the coastal/marine waters of Cohasset Harbor in Cohasset. Jacobs Meadow is subject to both the flooding events and flooding impacts from upstream/upgradient flooding to James Brook, and from coastal flooding/coastal storm surge impacts from the coastal/marine waters of Cohasset Harbor, during storm events. This sewer replacement project will help eliminate the leakage of septic wastewater flows into Jacobs Meadow, James Brook, and Cohasset Harbor. This sewer replacement project will have positive environmental impacts on the water quality within the subject freshwater wetland resource areas, the coastal/marine wetland resource areas, and the cosatal/marine waters of Cohasset Harbor. Cohasset Harbor (marine waters) is classified as a designated No Discharge Zone by the EPA. The Town of Cohasset under a 319 Grant from Massachusetts Coastal Zone Management has constructed forty five raingardens throughout the town, in an effort to manage, collect, and treat existing untreated stormwater runoff volumes within the town. The Town of Cohasset has also built numerous vegetated drainage swales to treat existing stormwater runoff from impervious surface areas within the town. In 2013/2014, the Town of Cohasset recently completed the construction of two raingarden projects - one at Cushing Street/Norfolk Road (Elms Meadow), and the other at Lighthouse Lane - (Cohasset Harbor). Another raingarden project has been approved at Beach Street, located directly adjacent and upgradient to Little Harbor.

1. Implementation of measures such as installing raingardens or other Low Impact Development (LID) applications to alleviate existing stormwater problems and water quality problems within he Town of Cohasset: Mass. DEP 319 NPS Grant

The Town was awarded a Massachusetts DEP 319 Nonpoint Source Pollution (NPS) grant (DEP Project # 07-06/319) to be used to compliment ongoing sewer work (in progress) around Little Harbor and Inner Little Harbor (impaired waters), and DEP issues a Notice to Proceed for this three year grant on February 1, 2008. The total award was \$250,000 which includes a required match of \$100,000 from Town Funds. Three BMPs (two raingardens and one structural BMP) were constructed, a culvert replaced on Beach Street, and the drainage network around Little Harbor expanded by the addition of pipes and catch basins in the Fall of 2009 under Construction Contract #BMP-09-01. The second phase of this project, Construction Contract #BMP-09-02, was awarded and work is in progress.

- 2. The Town received another Massachusetts DEP 319 Nonpoint Source Pollution (NPS) grant (DEP Project #10-04/319) to be used for stormwater improvements in the Little Harbor, Cohasset Cove, and Cohasset Harbor areas. The total award was \$300,000, which includes a required match of \$120,000 from Town funds. The monies will be used to protect and to improve water quality through the construction of BMP solutions.
- 3. In addition, the Town of Cohasset has worked closely with the Cohasset Center for Student Coastal Research (CSCR) to provide grant funding for the testing of stormwater samples collected at Little Harbor (impaired waters) outfalls. The 319 grant projects also include a public outreach and education component to explain the project and the effectiveness of Stormwater BMPs to residents and to encourage participation in reducing non-point source pollution.
- 4. To date over 45 BMPs have been installed under Mass DEP 319 NPS Grants, which includes BMPs constructed under the Town's first DEP 319 NPS Grant Project (DEP Project #03-12/319). These existing raingardens are currently in need of maintenance and/or restoration.
- 5. The Town of Cohasset is currently reviewing the status of the constructed raingardens under the 319 grants, in order to assess the need for maintenance and/or restoration of the raingardens. The Cohasset Water Commission is reviewing the overall status of the existing raingardens in Cohasset, the required maintenance and/or restoration for these existing raingardens, and ways to fund the maintenance and/or restoration, and improvements to these existing raingardens in Cohasset. The Town of Cohasset Conservation Commission and Cohasset Stormwater Advisory Committee are reviewing funding opportunities to pay for the required maintenance and/or restoration of the raingardens. The Town of Cohasset is seeking volunteer workers, possibly from the Cohasset Center for Student Coastal Research (CSCR) and Cohasset High School, to help maintain and/or restore the existing raingardens in Cohasset.
- 6. The Town of Cohasset has completed the construction of a raingarden located at a low point at the intersection of Atlantic Avenue/Nichols Road, directly adjacent to Little Harbor, which will provide critical collection and treatment of stormwater runoff, prior to release of the runoff into the coastal/marine waters of Little Harbor.
- 7. The Town of Cohasset completed in 2013/2014, the construction of the sewer replacement project (\$200,000) at Jacobs Meadow in Cohasset. The sewer replacement project will help eliminate septic wastewater flows from entering Jacobs

Meadow, James Brook, and Cohasset Harbor. This sewer replacement project will have a positive environmental impact on freshwater wetland resource areas, and coastal/marine wetland resource areas, and water quality.

- 8. The Town of Cohasset Conservation Commission continues to encourage property owners and applicants to utilize native plantings and salt tolerant plantings within coastal properties adjacent to Inner Little Harbor, Little Harbor, Straits Pond (ACEC), and Cohasset Harbor. The Cohasset Conservation Commission encourages property owners to eliminate the use of maintained lawn areas & chemical treatments, which significantly increase nitrate loadings to coastal/marine waters, within the 100' buffer zone of coastal wetland resource areas, and the Conservation Commission strongly encourages the planting of native plantings within the buffer zone of wetland resource areas.
- 9. The Town of Cohasset Conservation Commission continues to encourage property owners to reduce impervious surface areas and associated surface water runoff and stormwater runoff within their properties, and to consider BMPs to reduce surface water runoff, and stormwater runoff.

Coastal Pollutant Remediation Grant Program/Coastal Zone Management (CZM) BMP Implementation within the James Brook Watershed

- 1. The Town was awarded a Coastal Pollutant Remediation (CPR) grant for BMP Design & Implementation within the James Brook Watershed (Grant #ENV 08 CZM 02). The total award was \$62,000, which includes a required match of \$15,570 (25%) from Town funds. The purpose of the grant is to improve the water quality and protection of Cohasset Cove through the construction of stormwater control and treatment systems within the James Brook watershed, part of the South Coastal Watershed. The designs include LIDs strategies to capture and minimize runoff flows and pollutants loadings into the Jacobs Meadow salt marsh and Cohasset Cove. A total of 5 stormwater BMPs were constructed under this grant program: 3 raingardens, 2 constructed wetlands, and a Filtera tree box filter.
- 2. The Town of Cohasset completed the new sewer replacement project (\$200,000) at Jacobs Meadow in Cohasset, in 2013/2014.

Adoption of town bylaws or other regulatory controls to manage and prevent additional stormwater issues.

- 1. Town meeting approval of the Stormwater Management Bylaw at the 2008 Spring Town Meeting.
- 2. The Stormwater Bylaw came into effect on July 10, 2008. The Stormwater Bylaw and the associated Stormwater Management Rules & Regulations establish minimum requirements and procedures to control: impacts from increased stormwater runoff; decreased groundwater recharge; and elimination of non-point source pollution associated with new development and redevelopment. Any project proposing an increase in impervious surfaces greater than 500 square feet in size must first obtain a stormwater management permit from the Cohasset Conservation Commission.
- **3.** The Cohasset Conservation Commission appointed Paul Shea, Independent Environmental Consultants, Inc., to act as the Stormwater Agent in December of 2011. The Stormwater Agent reviews all stormwater management applications for development and redevelopment projects in the Town of Cohasset.
- 4. In addition, Paul Shea, Independent Environmental Consultants, Inc., assists the Town of Cohasset with, when requested for technical assistance on stormwater management issues, enforcement, and compliance issues.
- 5. The Town of Cohasset Stormwater Advisory Committee provides advice concerning stormwater runoff management issues to the Town.

Environmental improvements have been made to the James Brook channel at Elm Street in Cohasset, in order to improve overall flooding conditions, and to improve tidal flushing within the wetlands within Jacobs Meadow. New tide gates have been installed at Cohasset Harbor where James Brook flows into Cohasset Harbor, in order to improve flooding conditions, improve overall tidal flushing of Jacobs Meadow, and improve the water quality of the subject wetland resource areas.

A new culvert has been installed at Border Street in order to improve stream flow, to improve tidal flushing into the upgradient wetlands, and to improve the water quality of the subject wetland resource areas.

Cohasset Harbor (coastal/marine waters) has been granted the designation of a No Discharge Zone from the U.S. Environmental Protection Agency, in an effort to protect the marine waters and marine environment of Cohasset Harbor from potential environmental pollution impacts, water quality impacts, from unauthorized discharges of pollutants, into the coastal/marine tidal waters of Cohasset Harbor. The Cohasset Harbormaster is responsible for the environmental monitoring of activities within the coastal/marine tidal waters of Cohasset Harbor. A proposed dredging project to dredge sections of Cohasset Harbor, and to improve the conditions within Cohasset Harbor is being proposed by the Town of Cohasset. Required environmental permits for this dredging project will be filed in 2014.

The Cohasset Conservation Commission is responsible for protecting all public water supplies within the Town of Cohasset, including Lily Pond (surface water supply – municipal public drinking water supply/reservoir), Aaron River Reservoir (surface water supply/reservoir), and all municipal wells (groundwater supply) drinking water supply, within the Town of Cohasset. The Cohasset Conservation Commission is also responsible for protecting Straits Pond, Area of Critical Environmental Concern (ACEC). The Cohasset Conservation Commission requires additional environmental controls and environmental mitigation for all proposed projects located within the contributing watersheds to Aaron River, Aaron River Reservoir, Bound Brook, Lily Pond, James Brook, Little Harbor, Straits Pond (ACEC), Gulf River Estuary, and Cohasset Harbor.

New FEMA Flood Zone Maps (July 27, 2012) have been prepared for the Town of Cohasset based upon the most current flood zone data for the Town. These new flood zone maps (2012) have been approved by DEP and FEMA. It should be noted that - some questions have been raised about the new flood zone maps in Cohasset, and those questions and flood zone issues are being reviewed by the Town of Cohasset, DEP DCR, and FEMA. The current FEMA Flood Maps and information within the Town of Cohasset, and within other coastal communities in Massachusetts, is currently being reviewed for overall accuracy, and possible revisions.

A Town Stormwater Advisory Committee was established in January of 2010. The current members of the Stormwater Advisory Committee are Edward Wadsworth, Sean Cunning, and Noel Collins. Edward Wadsworth is the main contact for the Town Stormwater Advisory Committee to the Cohasset Conservation Commission. The purpose of the Stormwater Advisory Committee is to conduct public education activities to support stormwater remediation; provide opportunities for public participation in stormwater and watershed remediation discussions in association with the Board of Selectmen, and the Conservation Commission; conduct an annual inventory of flood prone areas in Cohasset on behalf of the Selectmen and interested Town Committees as a supplement to the Final Flood Control Master Plan of 2009; seek funding sources including grants for stormwater remediation; provide assistance to the town employees responsible for preparing the required reports to the EPA and others.

Cohasset Cove continues to be a water quality impaired water. The Town continues to perform water quality tests on the lower portion of James Brook and the stormwater structures leading into James Brook. After storm events, Fecal coliform and Enterococci bacteria levels are high within the sampled sites. The Gulf River, the other major water body emptying into Cohasset Cove also continues to be monitored by volunteers from the Cohasset Center for Student Coastal Research (CSCR), and the EPA. A source of the bacteria is a storm drain discharging into the Gulf River in North Scituate Village. Cohasset continues to work with Scituate officials to upgrade septic systems in the area to reduce the overall pollutant load to the Gulf River Estuary.

The Little Harbor and Inner Little Harbor sewer connection project is still in progress in 2014, this sewer connection project is approximately 90% complete in 2014.

The Town of Cohasset is reviewing the existing drainage problems within the Treats Pond and Sandy Cove area of Cohasset, and potential solutions to these existing drainage problems within this coastal area of Cohasset.

Town DPW employees have been trained in proper street sweeping, catch basin cleaning, and GPS to locate structures.

Coughlin Environmental Services, LLC has prepared a Flood Control Master Plan (FCMP) for the Town of Cohasset. Recommendations for installations of BMPs within the James Brook watershed, and the Treats Pond/Atlantic Avenue area were part of this flood management plan.

The Cohasset Conservation Commission and Cohasset Stormwater Advisory Committee are seeking ways to fund the future maintenance and reconstruction of the existing 45 raingardens that have been constructed in the Town of Cohasset, for the purpose of stormwater management, and water quality protection. Volunteer workers from the Cohasset Center for Student Coastal Research (CSCR) and Cohasset High School are being considered for this project.

The Town of Cohasset Conservation Commission (Norfolk County) is working with the Town of Scituate Conservation

Commission (Plymouth County) on the Hunters Pond Dam Removal Project, which is an ecological wetland restoration project including: Lily Pond, Aaron River Reservoir, Bound Brook, Hunters Pond, Gulf River Estuary, and Massachusetts Bay, in Cohasset and Scituate, MA. The project will restore wetland resource areas, aquatic wildlife habitats, diadromous fish habitat, and will improve water quality conditions, within freshwater wetland resource areas, and coastal/marine wetland resource areas. The project will have a positive impact on aquatic wildlife species, valuable wildlife habitats, and the water quality of the subject freshwater and coastal wetland resource areas. A grant was approved by the Gulf of Maine Council for this project; and another grant has been applied for with NOAA for additional work associated with this significant wetland restoration project. This ecological restoration project will have positive impacts on commercial and recreational fishing within the towns of Scituate (Plymouth County), and Cohasset (Norfolk County). Volunteers from the Cohasset Center for Student Coastal Research (CSCR) will be providing services for the collection of required water quality samples, environmental monitoring, and environmental analyses, within the proposed wetland restoration project area. In January of 2014, another habitat restoration grant for the Hunters Pond Dam Removal/Diadromous Fish Restoration Project was applied for to the National Fish and Wildlife Foundation (NFWF), U.S. Department of the Interior, for the engineering, permitting, and construction of the proposed project, which includes ecological restoration of natural wildlife habitats, aquatic habitats, wetland resource areas, and improvement for River Herring.

Part III. Summary of Minimum Control Measures

1. Public Education and Outreach

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 8 (Reliance on non-municipal partners indicated, if any)	Planned Activities
1.1 Revised	Health Notes to Cohasset Mariner	Cohasset BOH	4 articles per year	Health Notes relating to stormwater were published in the Cohasset Mariner	Continue to publish at least 4 articles per year.
1.2 Revised	Informational Mailing	Town of Cohasset	Households reached	Water Commission, BOH, North and South River Watershed Association "Greenscapes" mailed to all residents	Continue to mail "Greenscapes" to all residents.
1.3 Revised	Beach and Stream Cleaning Day	DPW, Residents, High School Students	2 collections per year	Two (2) of clean up days	Have two (2) cleanup days.
1.4 Revised	Provide information on the Town Website	Town of Cohasset	Revise/update quarterly	2012 Flood Prone Area Report posted on Town website Minutes of Stormwater Advisory	Continue to post Stormwater Advisory Committee meeting minutes on Town website
1.5 Revised	Provide summary of Flood Control Master Plan	Town of Cohasset	Information posted on website	Summaries on Town website	Update information on Town's website as necessary

	(Preferred Units) Response
Average frequency of street sweeping (non-commercial/non-arterial streets) **	(times/yr)
Average frequency of street sweeping (commercial/arterial or other critical streets) **	(times/yr)
Qty. of sand/debris collected by sweeping **	(lbs. or tons)
Disposal of sweepings (landfill, POTW, compost, beneficial use, etc.) **	(location)
Annual Sweeping Costs	
 Annual budget/expenditure (labor & equipment)** 	(\$)
Hourly or lane mile contract rate **	(\$/hr. or
	ln mi.)
 Disposal cost** 	(\$)
Sweeping Equipment	
Rotary brush street sweepers owned/leased	(#)
Vacuum street sweepers owned/leased	(#)
Vacuum street sweepers specified in contracts	(y/n)
% Roads swept with rotary brush sweepers **	%
 % Roads swept with vacuum sweepers ** 	%

Reduction (since beginning of permit coverage) in application on public land of:		
("N/A" = never used; "100%" = elimination)		
 Fertilizers 	(lbs. or %)	
 Herbicides 	(lbs. or %)	
 Pesticides 	(lbs. or %)	
Integrated Pest Management (IPM) Practices Implemented	(y/n)	

	(Preferred Units)	Response
Average Ratio of Anti-/De-Icing products used **	% NaCl	
	% CaCl ₂	
(also identify chemicals and ratios used in specific areas, e.g., water supply protection areas)	% MgCl ₂	
	% CMA	
	% Kac	
	% KCl	
	% Sand	
Pre-wetting techniques utilized **	(y/n or %)	
Manual control spreaders used **	(y/n or %)	
Zero-velocity spreaders used **	(y/n or %)	
Estimated net reduction or increase in typical year salt/chemical application rate	(±lbs/ln mi.	
	or %)	
Estimated net reduction or increase in typical year sand application rate **	(±lbs/ln mi.	
	or %)	
% of salt/chemical pile(s) covered in storage shed(s)	(%)	
Storage shed(s) in design or under construction	(y/n or #)	
100% of salt/chemical pile(s) covered in storage shed(s) by May 2008	(y/n)	

Water Supply Protection

Storm water outfalls to public water supplies eliminated or relocated	# or y/n	
Installed or planned treatment BMPs for public drinking water supplies and their protection areas	# or y/n	
• Treatment units induce infiltration within 500-feet of a wellhead protection area	# or y/n
