NPDES PII Small MS4 General Permit
Annual Report
(Due: May 1, 2018)

Part I. General Information

Contact Person: William A. Fitzgerald, Jr.  Title: DPW Director
Telephone #: 508-588-1414 x1024  Email: wfitzgerald@avonmass.org
Mailing Address: Town Hall, 65 East Main St, Avon MA 02322

Certification:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Part II. Self-Assessment

In 2017, Avon built on work performed in previous years. Asset management and mapping completed as part of the Water Infrastructure Planning and Technical Assistance (WIPTA) Grant, completed in 2016, informed work for the DPW on the overall condition and life expectancy of their stormwater assets. In addition to the location of these assets, the Town extended their mapping to include attributes related to the condition of the assets which allows the Town to utilize their field based operations and asset management system, Utility Cloud, to produce work flows for these assets. The mapping and asset management work continues to improve the efficiency of the maintenance and repairs of the stormwater system.

Furthermore, Avon was the recipient of a Southeast New England Program (SNEP) Grant from the U.S. Environmental Protection Agency (EPA) and the New England Interstate Water Pollution Control Commission (NEIWPC) in 2016. This grant, titled “Examining Stormwater Pollution to Trout Brook”, has allowed for the Town to take a comprehensive approach to addressing both stormwater and drinking water concerns. In 2017, the Town made significant progress on the grant. The Quality Assurance Project Plan (QAPP) for the sampling component of the grant was developed in the previous permit year and was used for field sampling as part of the project. The QAPP defined stringent sampling procedures that had to be followed to confirm that the data generated was scientifically valid and describes the quality assurance policy, management, structure, and procedures to implement the requirements necessary to verify, calibrate, and validate the output of the water quality samples and GIS data reviewed as part of this project.

Work completed under the grant in 2017 included:

- Comprehensively summarizing known pollution problems in the watershed based on impairments and TMDLs, drinking water pollutants of concern, and summarizing land use characteristics to evaluate possible sources of pollutants and sediment loads to Trout Brook including septic systems, municipal land and open space, stormwater infrastructure, roadways, overall land use, impervious cover and directly connected impervious cover, and soils.

- Identifying priority catchment areas, by first delineation of catchments using GIS. Initial catchment delineations for outfalls discharging within the Trout Brook Watershed were completed after reviewing and relying on the Metropolitan Planning Commission’s GIS-Based Catchment Delineation and Ranking Methodology available through the Neponset Stormwater Partnership.\(^1\) Delineations were completed using data from the 2011 Northeast LIDAR dataset\(^2\), hydrology from MassDEP, roadway centerlines from MassDOT, and right-of-way information from the Town’s parcel layer. Catchments were initially delineated using the Neponset methodology but many of the catchments were manually adjusted because of the lack of

\(^2\) LIDAR 2011 Northeast Dataset
connectivity in the Town's stormwater system. Catchment boundary adjustments were made using a desktop assessment after analyzing the nearby topography using a 3 foot contour layer developed in Town and USGS topography. The results of this delineation process produced 24 catchments. Catchment delineation using topography alone is not appropriate and does not correctly represent the drainage area contributing to that outfall. As more of Avon's system is mapped the catchments will need to be further refined.

- Conducting outfall screening during dry and wet weather to characterize the levels of pollutants reaching Trout Brook from the priority catchment areas. Samples were analyzed using field instrumentation and test kits for Temperature, Conductivity, Salinity, Dissolved Oxygen, pH, and Chlorine. Additionally, the samples were analyzed at a laboratory for Ammonia, Surfactants, Total Nitrogen, Total Phosphorus, Total Sodium, Fecal coliform, E. coli, Total Suspended Solids, and BOD5.

Remaining work on the grant, to be completed by June 30, 2018, includes identifying and assessing structural Best Management Practices for selected catchments and preparing conceptual designs for structural BMPs to reduce pollutants of concern. This grant supports and enhances the Town's overall stormwater management program, and is part of the Town's comprehensive approach to water management. Avon recognizes the impact stormwater has not only on the environment but on the Town's drinking water; since almost all stormwater in Avon releases into the drinking water well Zone II's, and much of it flows through Zone 1's, maintenance and performance of the stormwater system is as much a drinking water issue as a receiving water concern.
## Part III. Summary of Minimum Control Measures

### 1. Public Education and Outreach

7. BMPs for Meeting Total Maximum Daily Load (TMDL) Waste Load Allocations (WLA)

Per the 2016 MS4 permit, effective July 1, 2017 as of the date of this annual report, Avon has stormwater discharges that discharge to waterbodies, or their tributaries, that are water quality limited due to nitrogen and/or phosphorus. Although none of these have an EPA approved TMDL, Avon recognizes the importance of addressing these impairments and, as part of the SNIP grant, is reviewing BMPs that could address these water quality limited waterbodies. The Town’s water department is currently monitoring subsurface migration of various pollutants in the area of test well sites on the Brockton/Avon Town Line as well. In addition, Trout Brook located in Avon is a tributary of the Taunton River watershed which is subject to a TMDL approved in 2011 for pathogens. The Town has been awarded the SNIP grant to investigate the sources of impairment in Trout Brook and will continue to work towards identifying and eliminating bacteria and pathogen sources into Trout Brook.

The Town continued to work on the components of the SNIP grant during Permit Year 15. The work completed includes the following: identifying priority catchment areas, surveying the land use in priority areas, and conducting outfall screening. For Permit Year 16, the Town will complete work under this grant by June 30, 2018. Remaining work includes identifying and assessing structural Best Management Practices for selected catchments, and preparing conceptual designs for structural BMPs to reduce pollutants of concern. A final report will be prepared and submitted to EPA and MassDEP as required by the grant.
