Printed Name: Catharine Hallsworth

Title: Administrator for the Board of Selectmen

Date: April 15, 2007

Part II. Self-Assessment

The Town of Hollis, New Hampshire has completed the required self assessment and has determined that the community is in general compliance with the MS4 permit requirements. During Permit Year Four, the Town of Hollis was able to sustain and expand the local storm water management initiative. The following is a general summary of our progress.

Public Education: The Town of Hollis continues to provide a variety of written resource materials to educate and inform the public of the need to improve local storm water management. In addition, a section of the municipal website has been designed and dedicated to the distribution of information describing local storm water management activities. This resource also provides tips and suggestions outlining how local residents can support these efforts. The town continues to provide municipal staff with periodic training and updates as new employees are hired and as new issues are identified. In addition, municipal staff continues to provide information and conduct outreach sessions targeting local residents during local community events and fairs.

Public Participation: The Town of Hollis Storm Water Committee sponsored several public meetings to discuss local storm water management activities during permit year four. Each of these meetings was announced and posted in accordance to the New Hampshire open meeting requirements. The public is invited to attend these meetings. The meeting notices and minutes are also posted on the municipal website as a means to enhance public access to this information. The Town of Hollis is continuing to explore ways to make the municipal website more user friendly while also posting information notices at public facilities as a means to keep the general public informed of local storm water activities and where interested parties can make inquiries.

Illicit Discharge Detection & Elimination: During permit year four, the Town of Hollis continued inspecting the permit area for illicit discharges. The purpose of this effort was to locate and identify any outfalls or illicit discharges draining into water bodies located in this area. No illicit discharges or outfalls have been detected to date. In the event that an illicit discharge is discovered, the Town of Hollis will attempt to visually trace the illicit discharge to its source. If this is not possible, then the Town would consider local land uses and use visual and olfactory observations in order to establish a sampling protocol to characterize the discharge. The information gained from this effort would be used to better identify potential sources and focus the municipal investigation. In cases, where it was not possible to visually trace a pipe or discharge back to the source, the Town would introduce non-toxic dye into the suspected source of the illicit discharge as a means to confirm the source of the discharge. A second option would be to initiate a smoke test as a means to identify the source of the discharge. Another option would be to block the illicit

discharge and monitor the area for a backup. Once the source had been identified, the Town would order the elimination of the illicit discharge. Dry weather sampling and analysis will commence upon discovery of an illicit discharge.

During permit year three, the Town of Hollis drafted a local regulation to enhance its ability to investigate and eliminate any illicit discharges found in the community. This regulation is currently being reviewed by a variety of local officials including members of the Hollis Planning Board, Conservation Commission, Department of Public Works and Building Inspector. Pending the adoption of a local regulation the Town of Hollis will utilize the authority granted by the State of New Hampshire health regulations governing the installation and use of septic systems to investigate illicit discharges detected in town. Based on the rural nature of the community, it is anticipated that any illicit discharge detected in town is most likely to be related to improper septic discharges, floor drains, sump pumps or the re-direction of springs and surface water. The Town of Hollis will continue to investigate and resolve all illicit discharges discovered during this effort.

The Hollis Storm Water Committee also reviewed the water quality status of the local rivers, streams and ponds to identify water bodies that have been designated by the New Hampshire Department of Environmental Services or the U.S. Environmental Protection Agency as impaired. Five local water bodies were found to have diminished water quality. Local impaired water bodies include: the Nashua River, Silver Lake, Flint Pond, Pennichuck Brook and Muddy Brook. Only the Nashua River and Flint Pond are located within the Hollis permit area. A review of the existing state and federal databases determined that a Total Maximum Daily Limit (TMDL's) has not been established for the contaminants of concern noted in any of these water bodies in Hollis. The Town of Hollis has informed local land use review officials of the status of these water bodies and advised local officials to promote measures that will aid in the maintenance or improvement of local water quality. The community is also exploring options for using this information to support local outreach efforts and seek greater resident participation in local environmental management.

Construction Site Runoff Control: Historically, the Town of Hollis has used the site plan review process and several municipal zoning ordinances to require the implementation of enhanced land use planning provisions that promoted environmental stewardship and aquifer protection. The Town routinely requires developers to initiate engineering controls and construction management practices to treat storm water and protect the quality of the local aquifer. The Town of Hollis uses municipal regulations in conjunction with the State of New Hampshire Site Specific Permit and Erosion Control permitting requirements to promote effective erosion control and storm water management at local construction sites.

The Town of Hollis drafted a storm water management ordinance during permit year two. This document has undergone extensive local review and discussion. Based on local input, it has been decided that the community would prefer to modify existing zoning and site plan review regulations to incorporate stronger storm water management standards into these documents instead of creating a single storm water management ordinance. As part of this process, storm water standards are being proposed for incorporation into the Town of Hollis Subdivision Regulations, Zoning Ordinance and Site Plan Regulations. Where appropriate these regulations will be supplemented by the adoption of a health regulation that enables the community to address and manage nuisances created by failing or inadequate drainage systems.

In the interim, pending the adoption of the proposed regulatory amendments, the Town of Hollis will continue to adopt a variety of storm water treatment requirements during the local site plan review process as authorized by the existing regulations. This has been the past practice of the town and will continue. The following are examples of storm water management practices that the Town of Hollis has routinely adopted during the site plan review process:

- The existing zoning regulations have established limits on the amount of impervious surface that may be constructed in the various planning districts based on potential site use and the environmental sensitivity of the general area.
- The Town often seeks to maximize the infiltration of clean surface run-off as a means to recharge the local aquifer.
- All applicants are required to prepare Erosion Control and Drainage Management plans for their projects. These plans must specify preventive measures to be implemented to protect local resource areas and to prevent re-location of sediment.
- The Town periodically inspects local construction sites to ensure that the Erosion Control and Drainage Management plans are being effectively implemented. Where necessary, the Town initiates enforcement action to ensure that all deficiencies are corrected.
- The Town now requires all sites covered by Phase II of the National Pollutant Discharge Elimination System requirements to submit a copy of their federal Notice of Intent, Storm Water Pollution Prevention Plan, and weekly site inspection reports to the Town. This practice enhances the ability of the community to more effectively monitor local compliance with these requirements.

These practices will continue.

When the Town of Hollis originally developed its storm water implementation schedule it had proposed to develop a fee schedule

to support the inspection and maintenance of drainage systems located within the MS4 permit coverage area. This task was scheduled to be completed during Permit Year 3. This task had been postponed for completion until Permit Year 4 because the Town of Hollis is in the process of conducting a comprehensive review and revision the entire municipal fee schedule at this time. While reviewing the municipal fee schedule, the Town of Hollis decided not to adopt a fee to specially support the inspection of drainage systems. Instead developers are required to fund a series of independent and comprehensive inspections of local construction projects where a variety of design and management practices including storm water management and erosion control are monitored on behalf of the Town.

Post Construction Runoff Control: Since 2001, the Town of Hollis utilized the municipal zoning ordinance to incorporate a series of enhanced land use planning provisions that promoted environmental stewardship and aquifer protection into local site design. These standards established a number of local standards which required developers to design all construction projects with enhanced storm water treatment which provided pollutant attenuation, mitigated peak volumes and promoted infiltration of treated surface run-off. The Town of Hollis has used these regulations in conjunction with the State of New Hampshire Site Specific Permit and Erosion Control permitting requirements to promote effective long-term erosion control and storm water management at local construction sites.

The Town of Hollis drafted a storm water management regulation during permit year two. The original goal was to create a single standard that outlined local storm water management design specifications and construction requirements. After much discussion, it has been decided that standard and recommendations originally proposed in the storm water management regulation should instead be incorporated into the existing municipal site plan, subdivision and zoning regulations. The revision of these regulations is currently in progress. Where appropriate these new provisions will be supplemented by the adoption of a local health regulation which enhances the ability of the Town to address and resolve nuisances created by failing or inadequate drainage systems.

Pending the adoption of the regulatory modifications, the Town of Hollis will continue to adopt a variety of storm water treatment requirements during the local site plan review process as authorized by the existing regulations. This has been the historic practice of the town and will continue. The following are examples of storm water management practices that the Town of Hollis has consistently adopted during the site plan review process:

- The existing zoning regulations have established limits on the amount of impervious surface that may be constructed in the

various planning districts based on the potential site use and environmental sensitivity of the general area.

- The Town often seeks to maximize the infiltration of clean surface run-off as a means to recharge the local aquifer.
- The Town routinely requires the development of drainage designs that provide pollutant attenuation, volume and flow mitigation.
- All applicants are required to prepare Erosion Control and Drainage Management plans for their projects. These plans must specify preventive measures to be implemented to protect local resource areas and to prevent re-location of sediment.
- The Town often requires the submittal of a drainage maintenance plan for commercial sites.
- The Town periodically inspects local construction sites to ensure that the drainage system is installed as originally proposed. Where necessary, the Town initiates enforcement action to ensure that all deficiencies are corrected.

These practices will continue.

Municipal Good Housekeeping: The Town of Hollis has historically sponsored a routine drainage maintenance and street sweeping program. This program continued during permit year four. The community has also examined storm water treatment practices at the Highway Garage, Transfer Station, Stump Dump, and the Fire and Police stations. Significant operational and drainage improvements were completed at each of these facilities during permit year four. A new salt barn has been constructed at the Highway Garage. In addition, the storm water drainage system, and the storage and handling of aggregate material were upgraded and improved. The collection and storage of automotive fluids turned in by local residents was also improved and upgraded at the Transfer Station. The Town of Hollis has also initiated operational improvements and site modifications at the municipal Stump Dump and Transfer Station as a means to prevent pollution and improve the treatment of storm water. These activities have reduced the environmental impact of municipal operations while also serving to protect local water quality.

In addition, the Town of Hollis also provides a number of disposal programs for local residents. Historically, the Town of Hollis has participated in the Nashua Regional Household Hazardous Waste Collection program. This program sponsors seven collection events where local residents can safely dispose of a range of chemical waste commonly found in the home. Residents can also bring waste oil, antifreeze, automotive batteries, and ashes to the Hollis Transfer Station for safe disposal. These efforts help to safeguard local water quality by providing residents with several options to safely disposal of hazardous materials. This approach helps to alleviate the risk that these materials will be discarded in such a manner that could threaten local water quality.

Additional information: The Town of Hollis continues to collaborate with the Nashua Regional Planning Commission and the New Hampshire Department of Transportation on regional storm water management concerns. This group meets on a periodic basis to share information and to investigate opportunities to where the communities can work together to support regional storm water management efforts.

These efforts will continue during permit year five.

Part III. Summary of Minimum Control Measures

1. Public Education and Outreach

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 4 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 5
2.1.A	Continue availability of brochures & pamphlets at Town Hall	Board of Selectmen	Provide pamphlets at Town Hall relating to Storm Water	Provided storm water pamphlets at Town Hall. Modified municipal storm water website to provide additional information to the public.	The Town will continue to expand and modify its outreach effort. News releases and public service announcements are planned for this year. Additional information will be added to the municipal website.
Revised	<i>The Town of Hollis decided to not survey local residents regarding storm water management at this time. The Town will instead focus on expanding the existing outreach program with an informative mailer.</i>			The Town continued posting storm water displays and outreach materials at a variety of public events and festivals. Municipal staff continues to research how to introduce storm water management as part of the local school curriculum.	The Town will continue to train and advise municipal staff on a periodic basis. The Town proposes to work with the local schools to introduce basic storm water information into the local curriculum.
2.1.B	Training on storm water for all Town of Hollis Municipal Employees	Department of Public Works	Train Police and Fire Personnel on NPDES	Provided the staff operating the municipal transfer station with additional training in effective storm water management.	Continue providing storm water management training to municipal staff as a means to re-enforcement storm water awareness and promote the implementation of good housekeeping practices
Revised					
2.1.C	Develop educational material for Hollis School District	Board of Selectmen	Prepare educational material for local schools describing effective storm water management.	Hollis is joining other communities in the Nashua Region to share the cost and draft a proposal to develop stormwater curriculum for communities	Hollis will continue efforts to develop educational material to be used by local school districts. Continue to provide updated brochures on storm water to the public. Will continue to work with other communities in the Nashua Region
Revised					
Revised					

2. Public Involvement and Participation

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 4 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 5
2.1.A	Using current methods notify the Town of Storm Water Pollution Prevention Plan Implementation	Board of Selectmen	Public notification <ul style="list-style-type: none"> • Cable • Newspaper • Municipal Website 	Hollis sponsored a public meeting of the local Storm Water Committee to discuss local storm water management goals and practices.	The Town proposes to continue sponsoring public meetings to keep the community informed of local storm water management activities.
Revised				Storm water management improvements proposed and adopted for a number of municipal facilities were discussed at numerous public meetings during this year. The Town has also repeatedly extended an invitation for local residents to join the Storm Water Committee on the municipal website.	The Town is also exploring the option of working with local environmental groups to augment the existing educational program.
2.2.B	Hold public forum to discuss the implementation of the Phase II permit and compliance	Board of Selectmen	Public Hearing <ul style="list-style-type: none"> • Conservation • Planning Bd • Selectmen • Storm Water Committee 	Hollis sponsored a public meeting to discuss local storm water management goals and practices.	The Town of Hollis will conduct a series of public meetings with Hollis Conservation Commission, Planning Board and Board of Selectmen to review the development and implementation of the proposed storm water regulations.
Revised					
2.2.C	Hold NPDES Phase II Committee Public Meeting	Board of Selectmen	Convene public meetings to discuss local storm water management efforts	The Hollis Storm Water Committee held a public meeting to discuss local storm water management activities.	The Hollis Storm Water Committee will continue to sponsor public meetings to review and discuss local storm water management activities.
Revised					

2.2.D	Develop storm water pollution hotline	Board of Selectmen	Establish means for community to file storm water complaints or pose inquiries	A Storm Water website has been installed on the municipal website. This page lists the name and email address for the local Storm Water Committee members. This approach offers the community multiple contacts to seek information regarding the local program or to report a problem.	The municipal website will be periodically updated to provide new and expanded information to the general public describing local storm water management activities while also offering tips and suggestions for the home owner.
Revised	<i>A dedicated hotline will not be established. Instead the town will utilize the municipal website, email and public postings to advise the public to contact various members of the local Storm Water Committee for more information.</i>

2.2.D Revised					

3. Illicit Discharge Detection and Elimination

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 4 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 5
2.1.A	Begin implementation of mapping system for outfalls and discharges in permit coverage area	Department of Public Works	The drainage system located in permit area has been mapped.	The Town has continued efforts to locate and map additional drainage structures and outfalls located in the community. The Town has begun to request additional utility mapping data from developers during site construction as a means to expand and maintain the current drainage database.	The town will continue efforts to locate and map additional drainage structures and outfalls located in the community.
Revised					
2.1.B	Locate and map additional illicit discharges in permit coverage area	Department of Public Works	Survey for outfalls in permit coverage area	Municipal staff continues to monitor the permit area for illicit discharges. No illicit discharges have been detected.	Continue surveying streams located in the permit area for illicit discharges.
Revised					
2.1.C	Begin dry weather testing at outfalls and discharges located in permit coverage area	Department of Public Works	Conduct dry weather sampling of illicit discharges or suspected outfalls	No illicit discharges have been detected in the permit area.	Continue surveying streams located in the permit area to monitor for illicit discharges. All illicit discharges located during this effort will be subjected to dry weather testing to determine their potential impact on local water quality.

4. Construction Site Stormwater Runoff Control

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 4 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 5
2.1.A	Draft new bylaw to address permitting and enforcement for storm water outfalls in the permit coverage area	Planning Board	Draft ordinance for review and approval by community.	A Storm Water Management Bylaw has been drafted. Based on local comments, this document will be revised and incorporated into the municipal subdivision, site plan and zoning regulations. These modifications are continuing. A health regulation will also be developed to supplement these new municipal standards.	Complete the review and revision of the proposed regulations. Educate and inform the public of the need for the regulations. Seek adoption of the regulations by the Board of Selectmen.
Revised					
2.1.B	Hold public forum to discuss Phase II compliance and the adoption of the local regulations.	Board of Selectmen	Convene public meeting to discuss local storm water effort and the proposed bylaw.	The Hollis Storm Water Committee met twice during permit year 4 to discuss the status of the storm water regulations.	Present revised regulations to the Hollis Board of Selectmen, Planning Board and Conservation Commission for review and approval.

5. Post-Construction Storm water Management in New Development and Redevelopment

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 4 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 5
2.1.A	Draft new bylaw to address permitting and enforcement for storm water outfalls in the permit coverage area	Planning Board	Draft ordinance for review and approval by community.	A regulation governing the investigation and resolution of Illicit Discharges has been drafted and submitted for review by the community.	Complete the review and revision of the proposed regulation. Educate and inform the public of the need for the regulation. Seek adoption of the regulation by the Hollis Board of Selectmen.
Revised				Storm water standards are currently being proposed for addition to the local site plan, subdivision and zoning regulations.	
2.1.B	Hold public forum to discuss Phase II compliance and the adoption of the local bylaw	Board of Selectmen	Convene public meeting to discuss local storm water effort and the proposed bylaw.	The Hollis Storm Water Committee met twice during permit year 4. The status of the storm water regulations was discussed at each of these meetings.	Convene public meeting with the Board of Selectmen and representatives of the Hollis land use review committees to discuss the proposed regulations.

6. Pollution Prevention and Good Housekeeping in Municipal Operations

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 4 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 5
2.1.A	Continue catch basin cleaning program in permit coverage area.	Department of Public Works	Continue routine inspection and cleaning program of catch basins located in permit area.	DPW sponsored a routine inspection and maintenance program for the drainage structures located in the permit area.	Continue routine maintenance program and expand maintenance efforts to include the entire town.
Revised					
2.1.B	Continue street sweeping program in the permit coverage area.	Department of Public Works	Continue street sweeping program in the permit area.	Conduct annual street sweeping program.	Continue municipal street sweeping program.
Revised					
2.1.C	Develop informational packets to be distributed to neighborhoods for adoption of storm water structure	Board of Selectmen	Produce packet for delivery to town residents	New Resident packet completed. The town is continuing to distribute this information.	Continue and expand local educational efforts to promote the adoption of local storm water structures.
Revised					
2.1.D	Begin inspecting and cataloging of storm water structures located in the permit coverage area	Department of Public Works	Survey and document drainage structures located in permit area.	Municipal staff continues to map and catalog new drainage structures as they are constructed or identified.	All future drainage structures constructed in the permit area will be added to this database. Municipal staff will continue to maintain and expand this database.

7a. Additions

7b. WLA Assessment

Part IV. Summary of Information Collected and Analyzed

- Hollis continues to participate in a regional storm water roundtable sponsored by the Nashua Regional Planning Commission. This group has been working on collecting and developing educational materials to raise awareness among the local population. This group has discussed collaborating on the development of a storm water educational curriculum for use in local schools.
- The Hollis Storm Water Committee has reviewed the water quality databases maintained by the New Hampshire Department of Environmental Services and the U.S. Environmental Protection Agency. During this review, we determined that there are no prime wetlands present in Hollis as defined by the DES. Five local water bodies appear on the 303(d) list of impaired water bodies prepared by DES. The impaired water bodies include: the Nashua River, Flint Pond, Silver Lake, Muddy and Pennichuck Brooks. The committee hopes to use the information to develop outreach materials to better inform local residents how their actions can influence local water quality while also describing preventive measures that can be initiated.
- Site modifications continue to be implemented at the Hollis Stump Dump, Transfer Station and Highway Garage to enhance materials management and improve the treatment of storm water at each of these sites.
- A holding tank has been installed at the Hollis Police station to collect industrial waste water generated during the washing of police vehicles. In addition, the storm drainage system has been re-constructed to provide enhanced pollutant attenuation.
- A holding tank has been installed at the Hollis Fire station to collect industrial waste water generated during the washing of bunker gear. In addition the storm drainage system has been re-constructed to provide enhanced pollutant attenuation.
- A new salt barn has been constructed at the Hollis Highway Garage. This structure will reduce the amount of salt entering the environment at this location. The Town of Hollis has also developed a comprehensive concept plan to expand and re-configure the Highway Garage facility. The modified design incorporates a variety of pollution prevention techniques.
- Improvements have been implemented the municipal Transfer Station to protect local water quality. Additional pavement has been installed to contain spilled material and aid site clean up. The waste oil collection area has been modified so that it is no longer exposed to the weather and to provide secondary containment.
- Additional information, agendas and Public Meeting Minutes can be supplied upon request.
