Structural Stormwater BMP Innovative Applications and Planning

1. Pelham's new Enterprise Bank won the 2012 NHPA Project of the Year award mainly due to the creative installation of subterranean flood water storage chambers resulting in a net zero impact from the required filling within the WCD to make the bank's location along Beaver Brook possible. This approach will likely be reflected in the Town's regulation revisions.
2. The Pelham dual roundabout project, currently being constructed, includes many new sidewalks. These sidewalks and the roundabout truck aprons will be constructed from porous concrete in order to avoid adding impervious surfaces and to keep the impacts of the roundabout construction neutral in terms of stormwater runoff.
3. In early 2013 the Town contracted to conduct an in-depth flood study for the Beaver Brook watershed to determine the causes of flooding and to recommend projects and regulation changes to limit new negative impacts to flooding and to mitigate the existing impacts. The study and report will be completed by summer 2013.
