

## Manchester's Stormwater Management Program Summary

### BMP Task Listing and Current Status for 2014

BMP#	Description	Develop	Implement	End Date	Priority	Completed
1-1	Assign SW Coordinator	8/1/2003	5/17/2003	7/30/2004	Completed	5/17/2003
1-2	Add SW Info to City's Website	10/1/2004	Ongoing	3/21/2004	Completed	10/7/2003
1-3	Outreach with Local watershed groups	10/1/2004	Ongoing	7/30/2004	Completed	Ongoing
1-4	Brochures available DPW & library	7/1/2004	Summer 2004	7/1/2006	Completed	Summer 2004 / Ongoing
1-5	Signage @ Urban Ponds (Reposted as Needed)	9/1/2003		3/21/2004	Completed	9/25/2003
1-6	Pet Waste Brochure & Signage	7/30/2004	Draft done 3/2004	7/1/2006	Completed	1/28/2005
2-1	Comply with State Public Notice		Complied with Ordinance and Regulations Notices			City Protocol
2-2	Annual Household Haz-waste Day		Yearly - Info provided by Recycling Coordinator		Completed	May 12 & Oct 13
2-3	Collect Used Oil, batteries & tires		Yearly - Info provided by Recycling Coordinator		Completed	12/31/2013
2-4	Urban Forestation "Green Street Program"	Mike Baer	Ongoing - 44 trees for year 2013		Completed	12/31/2013
2-5	Stormwater & Combined Sewer Hotline	665-6899	9/1/2003	7/30/2004	Completed	8/26/2003
3-1	Present Draft Storm Sewer Ordinance	Adopted	12/1/2003	7/30/2006	Completed	8/2/2006
3-2	Dry weather screening of outfalls 2X/5yrs		4/1/2004	9/30/2005	Completed	Completed / Ongoing
3-3	Develop & Implement Illicit Discharge Protocol		1/1/2004	7/30/2008	Completed	8/1/2003
3-4	Map Outfalls & Receiving Waters		Ongoing updates of City's GIS		Completed	12/12/2005
4-1	Ordinance - Erosion, Sediment & Construction Material		12/1/2003	Adopted Ordinance & Regulations	Completed	8/2/2006 - 12/5/2006
4-2	Develop Procedure for Public Comment		9/1/2003	Outline City Protocol for SWMP	Completed	8/1/2003
4-3	Check Erosion & Construction Material Onsite		(Developed winter of 2003)	List used at inspections	Completed	In Use
5-1	Ordinance for Runoff Controls for Developments		12/1/2003	Adopted Ordinance & Regulations	Completed	8/2/2006 - 12/5/2006
5-2	Recommend BMP Manual for Planners & Developers		8/1/2003	Outlined in Regulations - 6(A), 1-4	Completed	12/5/2006
6-1	Install Silt Fence Around Snow Dump		9/30/2003	11/1/2005	Completed	11/14/2006
6-2	Track CB Cleaning Program, Priority Basins Annually		8/1/2003	9/15/2003	Completed	12/31/2013
6-3	Sweep Streets 3X Annually		9/1/2003	Before Phase II	Completed	Min 3X/yr.
6-4	SOPs for Disposal of CB and Street Sweeping Residuals		8/1/2003	Visit 6/26/2003	Completed	Ongoing
6-5	Minimize Salt Usage, Maintain Cover Over Salt Storage		12/1/2003 (1)	11/1/2005	Completed	12/31/2013
6-6	Program to Clean Pond Inlets and Trash Racks		8/15/2003	Tank Inspections	Completed	Ongoing
6-7	Develop/Implement Employee Education Program		9/1/2003	Nutt Pond / Tannery Brook	Completed	Ongoing
6-8	Design & Construct Pond Specific P2 Projects		8/31/2003	Spring / Summer 2004	Completed	Completed / Ongoing
6-9	BMPs for Derryfield Country Club		12/31/2003	7/30/2006	Completed	8/1/2004

(1) Although the City covers salt piles, calibrates sander/salt spreaders and provides snow fence around snow dumping areas, there is no formal salt reduction program. Salt is applied as needed and completely weather dependant. The City has done a pilot study in the Nutt Pond sub watershed to determine sand and salt application rates and what can be done to reduce this impact. A pollutant-load watershed model was developed for this watershed. The Nutt Pond Watershed Sediment Loading Reduction brochure was developed and was sent to all the commercial property owners to try and reduce the loadings to Nutt Pond. A follow-up survey was conducted to determine the effectiveness of the program. A one page informational brochure was developed to provide residents with additional information on how they can protect the pond. This informational brochure is posted at the kiosk.

**City of Manchester, New Hampshire**  
**Stormwater Management Program Annual Report**  
**May 1, 2013 through April 30, 2014**

**Table of Contents**

**Section 1 – Public Education & Outreach**

- 1-1 – Assign Coordinator
- 1-2 – Develop Stormwater Website
- 1-3 – Outreach with Watershed Organizations
- 1-4 – Brochure Distribution
- 1-5 – Install Signage at Urban Ponds
- 1-6 – Distribute Pet Waste Brochures

**Section 2 – Public Participation**

- 2-1 – Comply with Public Notification
- 2-2 – Household Hazardous Waste Days
- 2-3 – Used Oil, Battery, and Tire Collection
- 2-4 – Urban Forestation – “Green Streets” Program
- 2-5 – Stormwater Hotline

**Section 3 – Illicit Discharge Detection and Elimination**

- 3-1 – Stormwater Ordinance
- 3-2 – Dry Weather Screening of Outfalls
- 3-3 – Develop & Implement System for Illicit Discharges
- 3-4 – Map Outfalls and Receiving Waters

**Section 4 – Construction Site Runoff Controls**

- 4-1 – Ordinance Requiring Erosion & Sediment Control
- 4-2 – Procedures for Public Comment
- 4-3 – Erosion Control Measures and Construction Materials Management

**Section 5 – Post Construction Management in New Development / Redevelopment**

- 5-1 – Ordinance Requiring Runoff Controls
- 5-2 – Recommended BMP Manuals

**Section 6 – Pollution Prevention / Good Housekeeping for Municipal Operations**

- 6-1 – Install Silt Fence at Snow Dump Areas
- 6-2 – Catch Basin Cleaning Program
- 6-3 – Street Sweeping
- 6-4 – SOP for Disposal of CB / Sweeping Residuals
- 6-5 – Minimize Salt Usage and Cover Storage Areas
- 6-6 – Implement Program for Cleaning Pond Inlets and Racks
- 6-7 – Implement Employee Training Program
- 6-8 – Construct Pond Specific P2 Projects
- 6-9 – BMPs for Derryfield Country Club
- Attachment A – Listing of Catch Basins Cleaned
- Attachment B – Urban Pond Priority CB Inspection
- Attachment C – Urban Pond Priority CB Cleaning List
- Attachment D – Structural BMPs Sediment Removals Log
- Attachment E – Engineering Staff & Sewer Crew Training Logs

## Certification Statement

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Kevin A. Sheppard, P.E.  
Public Works Director

Date: 9/21/14

## **BMP #1 Public Education and Outreach**

### **# 1-1, Assign Stormwater Coordinator – (BMP Completed)**

**Current Status:** The City of Manchester hired the stormwater coordinator on May 17, 2003. The title for this position is Environmental Permits Coordinator.

**BMP Effectiveness Evaluation:** The Coordinator position allows the City to review, implement and enforce requirements of the stormwater program effectively. The responsibility of the position meets, but in many cases exceeds the level of expectations of the regulatory agencies. The hiring of the Coordinator has fulfilled all the requirements of the five-year program, one year ahead of schedule.

**Future Goals:** To continue to carry out the requirements of the stormwater program. To expand the program through implementation of stormwater practices that goes beyond the five-year program requirements and to meet the requirements of the next permit.

The Coordinator will continue the inter-departmental efforts between the Planning, Parks & Recreation, Health and Highway Departments to enhance the existing stormwater program.

To utilize the City's engineering inspection staff to a greater degree when they do construction site inspections related to infrastructure. Each year they learn more about the stormwater program and implementation of BMPs for erosion and sediment control. Training was conducted on April 10<sup>th</sup> and 11<sup>th</sup>.

### **# 1-2, Add Stormwater Information to the City's Website – (BMP Completed)**

**Current Status:** The City of Manchester uploaded the initial stormwater website on October 7, 2003 consisting of four pages. Since then the website has expanded considerably. The total number of pages accessible within the stormwater site is well over fifty, which includes outside pages, related to stormwater, and associated PDF files.

The Urban Pond website is a site linked and referenced throughout the stormwater website. The stormwater website is also linked through the Urban Pond website. The Urban Pond site is an example of how stormwater controls can improve and enhance the quality of local ponds and lakes. The websites for stormwater and urban ponds were updated this reporting year.

**BMP Effectiveness Evaluation:** This BMP continues to be a highly effective means of providing stormwater information for public access. Several cities and towns within New Hampshire and New England have reviewed and commented on the extensiveness and material included in Manchester's website.

**Future Goals:** To update the websites for changes to the stormwater program based on the next MS4 permit requirements. More pages will be added to inform the public of the status of the required tasks as outlined in the program.

**# 1-3, Conduct Outreach with Local Watershed Organizations – (BMP Implemented & Ongoing)**

**Current Status:** The City has provided funds for kiosk maintenance supplies for 10 kiosks, equipment, and water analyses for the two watershed organizations (Crystal Lake Preservation Association – CLPA and the Pine Island Pond Environmental Society – PIPES) and the part-time acting coordinator of the Manchester Urban Ponds Restoration Program (Jen Drociak). This commitment will continue through the Stormwater Program.

The formal, full-time City-funded Urban Pond Restoration Program Coordinator position was terminated in February of 2005 and was carried within the Planning Department through December 2005 when it was subsequently eliminated. There is no longer anyone assigned to coordinate these activities.

Without a formal full-time Urban Pond Restoration Program Coordinator, outreach has continued through the Environmental Permits Coordinator and also the acting coordinator, who works on a seasonal, part-time basis with funding through the Environmental Protection Division.

The acting coordinator performs website and outreach material updates, annual kiosk maintenance at 10 kiosks, coordinates pond cleanups twice per year, and monitors water quality at four ponds three times during the summer. Please see the attached link for the cleanup events this year.

<http://www.manchesternh.gov/website/Departments/EnvironmentalProtection/SEPP/PondRestoration/CleanUpEvents/tabid/1034/Default.aspx>

The City has budgeted for total phosphorus analysis, while all other sampling is performed in the field and / or analyzed at no cost at the NHDES Limnology Center under the umbrella of the NH Volunteer Lake Assessment Program (VLAP). The level of sampling and analysis that was done when the Urban Pond Coordinator was with the City has remained the same. This work is being completed by members of the watershed organizations along with the Environmental Permits Coordinator and the Urban Ponds Restoration Program acting coordinator.

The acting coordinator updates the Urban Pond Restoration Program website and posts the results of the sampling on the City's website for the public to view. Please see below the attached link.

[http://www.manchesternh.gov/Portals/2/Departments/enviro\\_n\\_protec/ponds\\_new/AllPondsWaterQualityTable2000-2013.pdf](http://www.manchesternh.gov/Portals/2/Departments/enviro_n_protec/ponds_new/AllPondsWaterQualityTable2000-2013.pdf)

**BMP Effectiveness Evaluation:** The outreach was highly effective. The City's Environmental Permits Coordinator, the acting coordinator and Conservation Commission will continue various aspects of the Urban Pond Program in the absence of the Urban Pond Coordinator.

The Manchester Urban Ponds Restoration Program received an Environmental Merit Award from the EPA on May 11, 2011. It was an honor to have that award bestowed on our program, a program that is supported by both our volunteers and our staff.

**Future Goals:** To continue the support for the watershed organizations and the acting coordinator, support the sampling and analyses efforts, and continue to update the website.

The City of Manchester is working with the New Hampshire Rivers Council as a project partner along with other organizations on the McQuesten Brook Watershed Management Plan and implementation efforts.

**# 1-4, Make Brochures Available at the DPW and Public Libraries – (BMP Completed)**

**Current Status:** The City has a limited number of previously developed brochures that are still available. These will be used for the continued education of the public. These brochures will be targeted toward individuals/groups that would best benefit from this information.

The City continues to stock a moderate supply of bookmarks, EPA children's crossword place mats, rulers with 10 "Earth Care Tips" and pencils. These are distributed at Earth Day events and other environmental days.

The City has developed and printed brochures explaining the "Wastewater Treatment Process" (provided in the first stormwater report), when visiting classrooms to teach students. These will continue to be given during classroom educational sessions.

**BMP Effectiveness Evaluation:** There have been no surveys or feedback forms developed to gauge the effectiveness of this BMP. The department has received limited feedback from its citizens.

**Future Goals:** To continue the outreach to the students. The City will continue to provide tours of the WWTP and training with students on wastewater and stormwater from the three different high schools in Manchester. This program was started in 2007 and has become an annual event. We also had sessions with students from Hesser College and with some middle school students. The EPD has also participated in the Science Fair judging with the Manchester Water Works.

To develop and provide informational brochures that can be mailed with the 24,000 customer accounts during the tenth year of the program. The mailer will advertise the website, stormwater hotline, and places where information can be obtained.

**# 1-5, Develop, Install & Maintain Signage at Urban Ponds – (BMP Completed)**

**Current Status:** The signage information that was presented in the first report is still applicable. There are issues with vandalism, but these signs are repaired in the spring when the Parks & Recreation department begins to prepare the Urban Pond areas for public usage. During the 2008 spring and summer seasons the signs at the ponds were replaced. Some new informational signs were added. The Plexiglas was replaced with some new Lexan which is more durable and will stand up to vandalism better. The kiosks are repainted on a regular basis as needed. An inspection of each kiosk is done in the spring to see what repairs and repainting efforts are needed. The kiosk at Nutts Pond is vandalized each year and each time the kiosk is repaired. Some other kiosks are vandalized at times and they are repaired accordingly.

**BMP Effectiveness Evaluation:** It is difficult to gauge the effectiveness of this BMP. The signs are only effective if read. The kiosks are at the popular entrance areas of each pond and are easily accessible. The individuals who frequent the area most will probably maintain more of the sign's information through subconscious familiarity. The kiosks are kept up to date and are more effective at getting the message across.

**Future Goals:** The goal is to maintain these signs in serviceable and readable condition. The kiosks will be updated, repaired, and painted as needed to help get information to the residents that are using the ponds. They are inspected in the spring to see what repairs and repainting efforts are needed.

**# 1-6, Distribute Pet Waste Brochures with Dog Licenses & Increase Signage at Parks – (BMP Completed)**

**Current Status:** There are signs for "No Fouling By Pet Waste" erected at the entrances of the urban ponds and also at City Parks. These signs reference the City ordinance that enforces this law.

In 2005, 10,500 brochures were mailed to all registered dog owners within the City of Manchester. The City Clerk has additional brochures that are given to all newly registered dogs. Residents who are renewing their dog licenses do not receive an additional brochure.

There is also signage at the ponds that indicate it is improper to feed ducks. This will help prevent geese and birds from fouling the shores of the ponds that the residents frequent.

**BMP Effectiveness Evaluation:** Studies have been undertaken in several metropolitan areas to determine the effectiveness of "Pet Waste" brochures. It has been determined that approximately 65 percent of the dog owners will clean up after their pets regardless

of whether or not they have been informed via a brochure. Twenty percent of dog owners can be encouraged to pick up after their pets where they didn't previously through the encouragement of informational brochures. There will always be 15 percent of dog owners who will continue to ignore the law even if provide information on a continuing basis.

Manchester is hoping that the original brochures encouraged the uninformed 20 percent (approximately 2,000 dog owners to clean up after their pets) where they hadn't before.

Our department continues to be encouraged and hopeful that dog owners are responding as there has been little evidence of animal waste during our shoreline surveys for illicit discharges and the pond cleanups.

**Future Goals:** To keep residents informed in regards to their obligations handling their pet waste. Resupply the City Clerk's office with brochures when requested. I recently checked with them on their supply of brochures and their supply is sufficient.

Continue visual field observations for problem areas when higher amounts of pet waste are noted. Review kennels and animal shelters for compliance with pet waste disposal practices

## **BMP #2 Public Participation**

### **# 2-1, Comply with State Public Notification Laws – (BMP Implemented & Ongoing)**

**Current Status:** The City of Manchester continues to comply with all Public Notification Laws regarding the Stormwater Management Program process. The meetings that EPD scheduled in the early stages of ordinance development, with the Planning Board, and the Highway Commission, were announced on the weekly agenda for those perspective meetings, posted at City Hall, the Highway Department, and posted on the City's website.

Examples of public announcements announced in the local newspaper were included in previous year's reports.

Manchester went beyond the newspaper public notice and mailed agendas and draft documents to developers, contractors and engineering firms that usually do business within the City. The City incorporated many of the comments into the draft Ordinance and the Regulations.

In addition to the Public Notification Law, the City of Manchester has a guide that all departments, boards, committees and the Mayor and Aldermen must abide by. It references the rules on Meetings, the Formation of Committees, and Rules for Ordinances, Resolutions and Orders, Access to Public Records and Meetings, and Minutes and Records Available for Public Inspection. These Rules comply with the State of New Hampshire Public Notification Laws as outlined in RSA 47:6, and RSA 91-A:1 through RSA 91-A:6. This guidebook is available in all departments for reference should questions arise in regards to the implementation of Public Notice Law regulations.

**Future Goals:** To continue the public notification policy whenever any changes are made to the ordinance, or when substantial changes are made to the Regulations.

### **# 2-2, Hold Annual Household Hazardous Waste Day – (BMP Implemented & Ongoing)**

**Current Status:** The City of Manchester held two Household Hazardous Waste Days in Manchester during 2013. These dates have always fallen on the second Saturday of May and the second Saturday of October. The first collection was held on May 11, 2013 and the second was held on October 12, 2013. The date of collection is mentioned on the City's website, announced on flyers at the Highway Department, and various other kiosks throughout the City, and also announced in the newspaper the week of the collection. On the City's website is an alternative household products list. This list was included in the 2009 Annual Report.

The City also sends out residential yard waste curbside collection schedules via sewer and /or water billing. It is also posted on the City's website. This helps prevent residents disposing of their leaves and yard wastes in brooks, streams and wetlands. The City provides information on yard waste and composting also on the City's website. This information was included in the 2011 Annual Report.

**The following amounts of wastes were collected during 2013:**

Waste Description	Quantity Collected
Universal Waste (TVs, CRTs, and computer peripherals)	269 Tons
Refrigerators	349 Units
Air Conditioning Units	576 Units

**Spring HHW Collection:** Hazardous materials consisting of the following components:

Waste Description	Quantity Collected (Pounds)
Waste Paint Related Material (Oil Based Paints)	7,200
Waste Aerosols	525
Waste Oxidizing Liquid	10
Waste Oxidizing Solid	50
Waste Pesticides Liquid	725
Waste Pesticides Solid	1,000
Waste Corrosive Liquids	175
Waste Caustic Alkali Liquids	350
Waste Mercury	2
Waste Ammonia Solutions	150
Batteries	10
Universal Waste (CFL)	50
Non DOT Regulated Material (Fluorescent Light Bulbs)	150
Waste Flammable Liquids	3,600
<b>Total</b>	<b>13,997</b>

**Fall HHW Collection:** Hazardous materials consisting of the following components:

<b>Waste Description</b>	<b>Quantity Collected (Pounds)</b>
Waste Paint Related Material (Oil Based Paints)	9,600
Waste Aerosols	420
Waste Pesticides Liquid	1,000
Waste Oxidizing Solid	200
Waste Pesticides Solid	800
Waste Corrosive Liquids	200
Waste Caustic Alkali Liquids	250
Waste Mercury	5
Waste Ammonia Solutions	125
Batteries	5
Universal Waste (CFL)	50
Non DOT Regulated Material (Fluorescent Light Bulbs)	75
Waste Flammable Liquids	3,000
<b>Total</b>	<b>15,730</b>

**BMP Effectiveness Evaluation:** The collection of universal wastes and the number of refrigerators this reporting year has increased compared to last year's report, but the number of air conditioning units decreased.

The household hazardous waste collection is possibly the most successful environmental program conducted semi-annually throughout Manchester. This program recovers a huge waste stream that could potentially be dumped in off road areas near brooks and ponds.

The City notifies all residents who receive a sewer bill regarding the pick up of yard waste and spring clean ups. It is also posted on the City's website. This notification should help in the prevention of people dumping leaves and grass-clippings along roadsides and brooks, which help reduce nutrients that move into the Merrimack River from the tributary streams.

**Future Goals:** Manchester will hold two hazardous waste collection days during the 2014 calendar year. The first will be held on May 10<sup>th</sup> and the second on October 11<sup>th</sup>.

**# 2-3, Continue Regular Used Oil, Battery and Tire Collection – (BMP Ongoing)**

**Current Status:** The City of Manchester continues to collect used oil, batteries, and tires. These are collected during normal business hours. These wastes are not reserved for the Household Hazardous Waste Days. The amount of wastes that were collected and shipped is listed in the next table.

**The City collected the following amounts of wastes during 2013:**

Waste Description	Quantity Collected
Tires	83 Tons
Batteries	7,640 Pounds
Used Motor Oil	1,300 Gallons

**Future Goals:** Continue the same level of accessibility and collection hours as currently established.

**# 2-4, Continue Urban Forestation through “Green Streets” Program – (BMP Ongoing)**

**Current Status:** The City of Manchester, through the Parks and Recreation “Green Streets Program,” sold and installed 44 trees during 2013. There were eight more trees planted in 2013 than in the previous year. The number of trees planted each year has been trending downwards. This was the first time we saw an increase in a number of years.

A Green Roof was installed in September of 2007 on the roof at City Hall using the GreenGrid system. The plants were sampled for heavy metals as a baseline to help determine uptake. The only metal that was detected was zinc. This is due to the zinc orthophosphate in the drinking water used for corrosion control. The plants were sampled on September 24, 2013 for heavy metals. There were three metals that were detected during this sampling event. Please see the table below. In 2012 there were four metals that were detected.

**GREEN ROOF SAMPLING RESULTS**

Parameter	2010 Results in ug/g	2011 Results in ug/g	2012 Results in ug/g	2013 Results in ug/g
Antimony	BDL	BDL	BDL	0.6
Arsenic	2.1	BDL	1.4	BDL
Beryllium	BDL	BDL	BDL	BDL
Cadmium	BDL	BDL	BDL	BDL
Chromium	BDL	BDL	BDL	BDL
Copper	BDL	BDL	8	BDL
Lead	2.9	3.8	47	1.7
Mercury	BDL	BDL	BDL	BDL
Nickel	BDL	BDL	BDL	BDL
Selenium	BDL	BDL	BDL	BDL
Silver	BDL	BDL	BDL	BDL
Thallium	BDL	BDL	BDL	BDL
Zinc	30	40	76	5

**BDL = Below Detectable Limits**

**Future Goals:** To continue the program as currently established. Assure the public is aware of the availability of this service through the City of Manchester. The City will continue to sample the plants on the Green Roof for metal uptake on an annual basis.

**# 2-5, Publicize & Maintain Stormwater & Combined Sewer Hotline – (BMP Ongoing)**

**Current Status:** The City established the Stormwater / CSO Hotline on August 26, 2003. The phone number is (603) 665-6899. The City previously sent envelope stuffers with the 24,000 bills (residential, commercial and industrial customers) informing these users of the storm water hotline and how it can be used to address environmental concerns. Information on the hotline will be provided anytime a stormwater flyer is mailed with the residential billing. The hotline number is also provided on the City's stormwater website and on the Environmental Permits Coordinator's business cards. The hotline is the Environmental Permits Coordinator's main phone number.

**BMP Effectiveness Evaluation:** This BMP is effective after the residents receive a flyer in the mail. The impact of the flyer drops significantly a few weeks after receipt. Staff that answers the phones provides the stormwater hotline phone number or a direct transfer when a concern is received by any citizen. By having the hotline number as the Environmental Permits Coordinator's main phone number this should help with the overall effectiveness of the hotline.

**Future Goals:** To continue using the website, flyers, brochures and other methods to inform the public of the stormwater hotline.

## **BMP #3 Illicit Discharge Detection and Elimination**

### **# 3-1, Develop & Present Draft Storm Sewer Ordinance – (BMP Completed)**

**Current Status:** The presentation of the Stormwater Ordinance was done October 4, 2005. Comments were received, reviewed and where appropriate, incorporated. The Ordinance was approved by the Board of Mayor and Aldermen on August 1, 2006.

**BMP Effectiveness Evaluation:** The adoption of the ordinance and regulations has given the City the ability to cite codified references for enforcement actions.

**Future Goals:** To continue to make full use of the Ordinance and Regulations to assure that the Stormwater Program is being enforced and managed properly. To review and update the ordinance when the stormwater utility is implemented and for changes made to EPA and DES regulations.

### **# 3-2, Continue Dry Weather Screening of Outfalls – (BMP Completed)**

**Current Status:** The requirement of two inspections during the five-year program was completed.

The ponds were sampled for phosphorous, alkalinity, conductivity, pH, turbidity, temperature, dissolved oxygen, and zooplankton / phytoplankton as part of the VLAP (Volunteer Lake Assessment Program).

The ponds and sections of the rivers are sampled each week during the summer months by the City of Manchester Health Department for recreational purposes. When the water results are greater than 88 E-Coli per 100 milliliters of water the area is usually posted and it may get closed for swimming depending on the location in accordance with NH RSA 485-A, Class B waters.

The Merrimack River was sampled for aluminum four times a month for a year. The sampling program was completed. A wet weather increase for the aluminum concentration has been observed.

The outfalls at the Wastewater Treatment Facility and at the Drop-Off Facility have been monitored according to the Multi Sector General Permit (MSGP).

**BMP Effectiveness Evaluation:** The City has catalogued observable outfalls along the Merrimack and Piscataquog River along with the ponds. The City has collected samples from outfalls that run in dry weather (usually the result of small streams), has tested them and has found that only background levels of bacteria are present. During the rare occasion of elevated bacteria counts follow-up sampling and investigations were conducted.

The urban ponds, being more environmentally sensitive, have several pollutants tested during the course of the summer. Please refer to the list of pollutants above.

**Future Goals:** The City will conduct dry weather screening per the requirements in the next permit. The new numbering system for our collection system as outlined in BMP # 3-4 will be used for the outfall identification when conducting the screening.

Continue sampling the urban ponds during the course of the summer for the pollutants listed above. Sample the outfalls at the Wastewater Treatment Facility and the Drop-Off Facility according to the MSGP.

### **# 3-3, Develop and Implement System for Detection & Elimination of Illicit Discharges – (BMP Completed)**

**Current Status:** This program was developed and submitted with the first year's report. The program has been a good baseline document for detecting illicit discharges. The New Hampshire Seacoast Coalition developed a document entitled "Guidelines and Standard Operating Procedures" for IDDE. Manchester did review this manual and included some of the procedures and suggestions into our developed Illicit Discharge Program.

**BMP Effectiveness Evaluation:** This BMP is effective in providing guidance when trying to determine the source of an illicit discharge that proves to be a difficult source to locate.

**Future Goals:** Our goal is to continue to aggressively respond to illicit discharges as they are found. The City will conduct illicit discharge investigation and monitor the outfalls per the requirements in the next permit.

### **# 3-4, Map Outfalls and Receiving Waters – (BMP Completed)**

**Current Status:** The City's engineer mapped the outfalls from earlier engineering studies in 2001. An extensive GIS mapping system was developed for the City to include both sewage and drainage systems. This mapping has been extended to include tax maps, City assessing information and the water department's infrastructure.

The City's engineering department inputs all the new growth and sewer extension updates into the GIS to assure it is a dynamic mapping system rather than a dated static system. The City's engineering department or our consultant does periodic updates of the GIS from work that has been completed by City crews, City projects, and our CMOM program.

Errors to the developed GIS system continue to be found in the field. The discrepancies are noted and brought to the City's engineering staff so the GIS information can be updated and corrected.

A new numbering system for the collection system features was instituted. The new numbering system links to the old numbering system.

**BMP Effectiveness Evaluation:** This tool has proven invaluable to our Stormwater Management Program. It is being used to track cleaning of lines, location of baffle tanks, sectioning off catch basin cleaning areas, and for review to determine potential locations for illicit discharges.

**Future Goals:** The department is taking advantage of more of the capabilities available with the GIS system. The GIS system is being populated by our consultant with information from system maintenance, system inspections, and other vital information. We plan to implement an Asset Management system this year as part of our CMOM program. This system will be used to track the condition and maintenance of the system.

The staff will continue to review the existing aerial photographs before a construction project is started and reference these against the construction as it progresses. A complete flyover of Manchester was completed in April of 2010. The GIS system was updated with the new aerials.

## **BMP #4 Construction Site Runoff Controls**

### **# 4-1, Develop & Present Ordinance to Require Erosion & Sediment Control Plan (to include construction material management plan and plan review for sites disturbing more than one acre) – (BMP Completed)**

**Current Status:** The Ordinance was drafted, reviewed, modified and adopted on August 1, 2006. A copy of the booklet containing both the Ordinance and Regulations is at the end of section three. The Board of Mayor and Aldermen authorized the Director of Public Works to develop a set of Regulations to expand upon and detail the content of the Ordinance. These Regulations were adopted by the Director of Public Works with approval by the Highway Commission on December 5, 2006.

**BMP Effectiveness Evaluation:** Manchester was possibly the first City in New England, and certainly New Hampshire that has adopted a specific Stormwater Ordinance and supporting Regulations. These documents will promote compliance at construction sites with subsequent enforcement capability should the contractor neglect Stormwater Pollution Prevention Plan requirements.

**Future Goals:** The same goal would apply here as that outlined in BMP # 3-1.

### **# 4-2, Develop Procedure for Receipt and Consideration of Public Comment – (BMP Completed)**

**Current Status:** The attachments outlined in BMP # 2-1 illustrate how the City processes public comment. All comments are taken seriously, the citizens are contacted, the issues discussed and if the suggestion is sound, incorporated into the stormwater management program.

Manchester will continue to receive suggestions via the website, phoned comments, statements made at hearings, and by letter.

**BMP Effectiveness Evaluation:** The process used during the public hearing regarding the Stormwater Ordinance was well received and most of the comments were incorporated into the adopted Ordinance (August 1, 2006). This process is working well.

**Future Goals:** The goal is to continue following the City's protocol with any future changes to the adopted Stormwater Ordinance or the approved Regulations.

### **# 4-3, Check Erosion Control Measures and Construction Material Management, Onsite Inspection – (BMP Implemented and Ongoing)**

**Current Status:** The City developed an inspection checklist for site visits. This inspection sheet has proven to be a comprehensive document when referring back to conditions that existed at a particular time during project development.

The inspection sheet includes information regarding the site, weather conditions since the last inspection, and the conditions of BMPs.

The inspection of BMPs is gauged against the Erosion and Sediment Control Plan and SWPPP that was submitted by the developer during the site plan approval process. Any deviance from the plan is noted and a clean typed copy is made from the field inspection notes. The clean copy is signed by the inspector and delivered to the contractor for action. Pictures taken at the site are referenced by link on the sheet and can be easily retrieved in the computer to evaluate the current findings with those from previous reports. An example of a completed site inspection form was included in the 2011 Annual Report.

Since the adoption of the Ordinance, the City has developed a two-part “Notice of Violation” that can be used in the enforcement process. An example of this report was included in the 2007 Annual Report. The inspection report serves as the first notice to the contractor that they need to come in compliance with their Stormwater Pollution Prevention Plan or Best Management Practices for site disturbances. A time frame for correction is outlined in the inspection report.

If the non-compliance has not been corrected at the time of the second inspection, a “Notice of Violation” is prepared and sent via certified mail, return receipt requested. A copy of the notice is presented to the site superintendent. More stringent time limitations are included for compliance.

If upon reinspection, the site non-compliance has not been corrected, the enforcement actions proceed, with associated fines and penalties, as outlined in the Ordinance.

**BMP Effectiveness Evaluation:** The field inspection checklist, “Notice of Violation,” Regulations and Ordinance provide the City with all the tools needed for compliance and enforcement regarding the Stormwater Program. The compliance at the construction sites has been well above average. Some violations were noted during this past year.

Contractors and developers have been quick to correct issues found. If they are present during the inspection I will show them the violations so that they can correct them right away.

**Future Goals:** The future goal is to make use of the tools available for inspection and enforcement. Also, to follow up on minor enforcement actions to assure that these issues are corrected. Without follow up, the process of escalating enforcement would not be possible. The sites will be inspected each month during the year. We are finding that with the climate changes that more sites are active year round. This requires inspection during the winter months that were traditionally non – active months.

## **BMP #5 Post-Construction Stormwater Management in New Development & Redevelopment**

### **# 5-1, Develop Ordinance to Require Runoff Controls for New & Re-Development for Projects Disturbing > One Acre – (BMP Completed)**

**Current Status:** This requirement is incorporated in the approved Ordinance and adopted Regulations.

Post construction consists of maintaining BMPs and structures that have been installed within a development after the contractor has left. The City spent many hours reviewing documents that required long-term maintenance for installed BMPs.

The department developed a “Long-Term Maintenance Agreement” to be signed by any new developments that are completed within the City. This will assure that the structures that are installed are maintained. The maintenance of structures after the construction was completed has always been the achilles heel throughout the country. Manchester will register this document with the Hillsboro County Registry of Deeds to be part of an Associations’ covenants that will assure that these structures are being maintained. An example of a Long-Term Maintenance Agreement was included in the 2009 Annual Report.

**BMP Effectiveness:** It is early to determine the effectiveness of this document. If it is signed, registered, and carried by the Association it should prove to be a highly effective means of assuring maintenance of BMPs long after the development is completed.

**Future Goals:** To assure that this agreement is signed by the owner and registered by the City before issuing the final certificate of occupancy for all future developments within the City of Manchester. The Coordinator will follow up on the agreements to ensure the maintenance is being performed. This will include an annual report to the City documenting that the maintenance was done, followed up by an inspection by City staff to verify that the maintenance was done.

### **# 5-2, Recommend BMP Manual for Use by Planners and Developers – (BMP Completed)**

**Current Status:** The suggested manuals referenced are outlined in the approved Regulations. These manuals are:

- New Hampshire Department of Environmental Services Sediment and Erosion Control Manual, (Rockingham County “Stormwater Management and Erosion Control Handbook for Urban and Developing Areas”);

- Manchester’s “Standard Specifications for Road, Drain & Sewer Construction”;
- Innovative Stormwater Treatment Technologies BMP Manual, NHDES, May 2003;
- New Hampshire DOT Guidelines for Temporary Erosion and Sediment Control and Stormwater Management – NHDOT Bureau of Construction.

Other reference manuals and materials are mentioned on the website. These have not been incorporated into the Regulations, but warrant a mention on the website. The listing of references mentioned on the website is listed below:

[EPA's BMPs for Stormwater Phase II](#)

[State of New Hampshire BMPs](#)

[International Stormwater BMP Database](#)

[California Stormwater Quality Associations' Handbook for Construction Site BMPs](#)

[U.S. DOT Guide to BMPs](#)

[EPA Guide to Developing a SWPPP](#)

[Overview of Minnesota's Construction Stormwater Permit](#)

[National Resource Defense Council Stormwater Fact Sheet](#)

**BMP Effectiveness:** These references are voluntary guidance. The manuals can be an effective approach as most New Hampshire contractors are familiar with the contents of these manuals and refer to these guidelines when developing their sediment and erosion control plans.

**Future Goals:** Continue to review other manuals to determine if these would be suitable for reference within the Stormwater Regulations. The NHDES has developed a three volume Stormwater Manual. This manual will be added during the next revision.

## **BMP #6 Pollution Prevention / Good Housekeeping for Municipal Operations**

### **# 6-1, Install Silt Fence Around Snow Dump Area – (BMP Ongoing)**

**Current Status:** Silt fences continue to be erected around the snow dumping areas in Manchester. The erection of these fences is verified during the month of November and early December.

In the spring after the snow has melted, any accumulated trash, debris and the silt fence is removed from the site until the next season.

During the previous years the City used a snow-melter to reduce the congestion caused by accumulating snow. This practice helped in reducing the spring peak runoff as the snow was melted during the colder days.

**BMP Effectiveness:** The silt fence keeps the trash and sand that is collected with the plowed snow from entering the waterways.

**Future Goals:** Continue with the existing program and assure silt fence is erected in areas where first time snow dump areas are set up.

### **# 6-2, Catch Basin Cleaning Program, Including Priority Catch Basins – (BMP Ongoing)**

**Current Status:** The City's catch basin cleaning program was on a high priority listing before the Stormwater Phase II program was initiated. The City contracts annually to have catch basins cleaned by a private company. The amount of funding dedicated to catch basin cleaning during Fiscal Year 2013 was \$30,000. The contract that we signed with the CB cleaning contractor is for 1,100 basins per year. The contract also required the contractor to inspect each catch basin after cleaning them.

We cleaned 2,000 catch basins over this reporting year. The catch basins were cleaned by the CB cleaning contractor or by the City's crews. An estimate of 0.4 cubic yards of material per basin is assumed. That would equate to 800 cubic yards of material that was removed from catch basins over the reporting year. The listing of catch basins cleaned is included as Attachment A.

During this reporting year we had issues with both truck numbers 701 and 567. Truck number 701 is our newest truck and truck number 567 is our oldest truck. We are looking to replace truck number 567.

There is a listing of priority catch basins adjacent to the Urban Ponds in the City that must be inspected annually, maybe twice if the condition warrants. City personnel inspect these in the spring and City equipment cleans these at least once during the reporting

year. If additional cleaning is needed, a City crew is dispatched to clean these basins more frequently. These were all cleaned at least once during 2013 by City of Manchester personnel or by the CB cleaning contractor. The priority status for these basins assures that a significantly reduced pollutant load enters the ponds. The Urban Pond Priority CB Inspection and the Urban Pond Priority CB Cleaning List are included as Attachments B and C respectively. The catch basins surrounding the urban ponds receive top priority.

Sewer calls are tracked to determine if roots, grease or other maintenance issues are the cause of the blockages.

**BMP Effectiveness:** This process continues to work well. The current schedule of CB cleaning is helping to minimize the pollutants getting to the ponds. The ongoing development of the problem areas listing sheet allows the City to trend areas that need more attention and response.

The sewer problem areas are noted and inspected on a minimum of an annual basis and sometimes more frequently, depending on the type and/or frequency of the problem. Approximately 60 percent of the City's sewer system is combined. Heavy rains will cause sewer problems beyond maintenance issues.

The City continues to inspect our sewer manholes in the combined areas through our CMOM program. We are also inspecting combined sewer lines using CCTV and zoom camera technologies. The City is still in negotiations with the EPA on our CSO Long Term Control Plan; this plan outlines our future separation efforts. The first portion of the of the Phase II program as proposed by Manchester will cost \$165 million over 20 years and remove 70 percent of the CSO quantity from the system.

**Future Goals:** To continue designation of the urban pond catch basins as a priority for cleaning. To reinforce to the City the need to finance the private contractor to clean additional catch basins within the City. Increase the number of catch basins cleaned by our crews, hopefully through less down time by our trucks and to address sewer problems through our CMOM program.

### **# 6-3, Sweep Streets Three Times Annually – (BMP Ongoing)**

**Current Status:** The City continues to follow a schedule of street sweeping presented in the first year's report. This year's winter was a typical winter with little sweeping performed during this season. The City has two vacuum and three mechanical sweepers.

Most of the sand found on City streets comes from winter sanding and some small amounts of sediment from erosion on residential lawns. Sand is applied to sidewalks and schoolyards during snowstorms. Salt is applied to the highways during snowstorms. A sand / salt mix is used during icing conditions or ice storms.

The amount of sand applied varies yearly. It is all weather dependent. The sweepers will pick up aluminum cans, cigarette butts, leaves, paper cups, plastics, and articles of discarded clothes, footwear, and a host of material that is not sand related. When sand is

mostly absent from the streets these items make up the bulk of the material collected by the sweeper. When sand is present it may make up the bulk of the material.

Most of the sand is collected off the streets during the first few neighborhood runs immediately after the winter storm season. Otherwise, most of the material collected is what is listed above. Therefore, it would be difficult to determine the amount of sand collected.

**BMP Effectiveness:** This BMP continues to be quite effective as some sections of the inner City business district are swept three times per week and others are swept twice a week. Some other sections of the City are swept once a month. The current sweeping schedule assures all City streets are swept more than three times annually. A copy of the schedule was included in the 2009 Annual Report.

**Future Goals:** To continue the street sweeping program at its current rate.

**# 6-4, Continue to Follow SOPs for Disposal of Catch Basin Cleaning and Street Sweeping Residuals – (BMP Ongoing)**

**Current Status:** The City continues to place street sweeping debris and catch basin debris up in the rear lot of the recycling facility. The street sweepings are placed on a concrete pad with three-sided cement block walls. These sweepings are dried out, mixed with the gravel / asphalt pile and eventually ground up to make road base for streets and sidewalks.

The catch basin waste is piled across from the street sweeping debris in a compacted depression. This catch basin waste is allowed to evaporate to a certain extent then it is also mixed with the gravel / asphalt pile and eventually ground up to also make road base for streets and sidewalks.

During 2013 the catch basin cleanings were tested for RCRA 8 Metals, Poly Aromatic Hydrocarbons (PAHs), and Volatile Organic Carbons (VOCs) according to NHDES Management of Street Wastes fact sheet WMD –SW–32. The material met the requirements to be reused in the production of base and sub – base aggregate.

**BMP Effectiveness:** This BMP is effective as designed and provides a reuse for the material collected that would otherwise be sent to landfill.

**Future Goals:** Monitor the catch basin disposal area for evidence of pollution to the surrounding area. Take any BMP measures necessary to assure pollution is contained. Continue annual testing of the catch basin cleanings as required by WMD –SW–32.

**# 6-5, Minimize Salt Usage and Maintain Cover over Salt Storage Area – (BMP Ongoing)**

**Current Status:** The salt the City uses for highway treatment in the winter is kept under cover at the Department of Public Works in the salt shed.

All salting trucks are calibrated once annually before the winter sand / salt application season begins to assure the greatest efficiency and minimal salt use during spreading. The amount of salt added in any season is dependent to the number of snowstorms, the amount of freezing rain received and the nightly refreeze conditions of early spring.

The City of Manchester pretreats roads with brine. The brine is made at the Department of Public Works and is applied 8 hours before a storm. It will take a few seasons to determine the amount of salt we were able to reduce.

The State of New Hampshire is working with communities along the Interstate 93 corridor to reduce the use of salt. They signed salt reduction agreements with these communities. In addition to signing salt reduction resolutions, Salem, Derry, Londonderry, and Windham all have individual Salt Reduction Plans in effect. NHDES has also prepared separate Chloride Reduction Implementation Plans for Beaver Brook, Dinsmore Brook, and Policy Brook.

The State of New Hampshire in 2013 created the statutory authority, RSA 489-C Salt Applicator Certification Option. Env-Wq 2200 Voluntary Certified Applicator Program was developed under RSA 489-C:3.

This rule provides road salt applicators with some BMPs to follow. It also reduces their liability if they become certified, follow the BMPs and they would have to track what is being applied. This rule can help us with our MS4 permit requirements. The applicators need to be certified through the Green SnowPro certification program to be eligible for coverage.

Training for certification is provided by the UNH Technology Transfer program (similar to their Road Scholars program), and certification is managed by the NHDES. UNH has trained over 500 salt applicators through the Green SnowPro certification program, and 230 of them have been certified by NHDES to date. The program includes BMPs for deicing operations and a tracking tool to track salt usage. Although certification is voluntary, the City of Manchester and other communities will promote this by highlighting cost savings through reduction of salt use, and emphasizing that limited liability also applied to parking lot owners who hire certified salt applicators.

The postings for the trainings will be at: <http://www.t2.unh.edu/>.

Manchester undertook a sub-watershed review around the Nutt Pond area for salting and sanding reduction. This pilot study used a model to see what improvements can be made to reduce the sand and salt application in this area and quantify the success. A sand

reduction program was developed and distributed to the commercial property owners in the watershed.

**BMP Effectiveness:** Salt usage is weather dependent and it is hard to gauge effectiveness. Manchester can compare the current chloride analyses taken at the urban ponds and compare those to past years to determine if there is a reduction. The unknown factor is the number of homes around any pond that have water-softening units, which contribute chlorides to the water table.

A survey was conducted to gauge the effectiveness of the sand reduction program around Nutt Pond. Of the 50 commercial property owners that received copies of the sand reduction program and were asked to complete an online survey, only 2.5 surveys were completed. One facility only completed half of the survey.

The Nutt Pond Watershed Restoration Plan and modeling was completed in January, 2010. A copy of the plan was included in the 2010 Annual Report.

**Future Goals:** Implement recommendations in the Nutt Pond Watershed Restoration Plan.

**# 6-6, Develop / Implement Program for Cleaning Pond Inlets & Trash Racks – (BMP Ongoing)**

**Current Status:** The project at Nutts Pond was completed in 2007. The new structures have been added to the maintenance logs. The modification to the structure at the North Inlet allows the isolation of the structure from the pond by using the installed gates. This will allow the removal of sediment from the structure. During the retrofit 20 cubic yards were removed from this structure. A repair was made in 2010 in the wetlands at the East Inlet. One of the channels had some erosion. The channel was repaired and seeded. It has been inspected since and the repair has held.

The City of Manchester completed another project in the Nutt Pond watershed. The project was referred to as the Woodgate Court Drainage Project. It was named this because the project starts at the end of Woodgate Court. A section of Tannery Brook at the end of Woodgate Court upstream of Nutt Pond was dredged and stabilized using natural vegetation, erosion control fabric, biologs, rock cross vanes, and natural seed mixes. Approximately 4,500 cubic yards of sediment were dredged from this channel. To protect this area from silting up again in the future a deep sump catch basin and a ten foot diameter deep sump drain manhole were installed. These two structures were added to the inspection list. They are inspected twice per year and cleaned at least once per year.

The dredging and stabilization of this channel should help reduce the loadings to the Nutt Pond East Inlet Forebay. The majority of the sediment that has been dredged from this forebay in the past originated from this channel and not from winter sanding operations.

The three, three-chamber baffle tanks at Dorrs Pond, the one, three-chamber baffle tank at Crystal Lake and the Vortech swirl concentrator at Douglas street have all been

inspected. The City added a swirl concentrator to the listing in 2007 that was in the Hooksett Plaza.

The City continues to use the checklist for the spring and fall inspections of these units to assure they are cleaned when they begin to get filled with sediment.

There is a StormTreat™ System at Crystal Lake that the City is currently operating. It was restarted in May of 2005. The City cleaned the lines, retrofitted the baffle tank and now has the unit on the semi-annual inspection checklist. The system worked fine during 2009.

The work that was done at Crystal Lake was recognized by the EPA as a Nonpoint Source Program Success Story. Crystal Lake and Crystal Lake Beach are no longer listed as impaired for primary or secondary contact recreation for sedimentation / siltation. A copy of this article was included in the 2009 Annual Report.

To keep track of the sediment that is removed from the BMPs. A Structural BMPs Sediment Removals Log was developed. This log has all the sediment removal data since 2005 or when the BMP was constructed. A copy of the log is included as Attachment D.

**BMP Effectiveness:** The amounts of sediment that are removed from the various structures indicate that the program is highly effective.

**Future Goals:** To assure that the structures continue to be checked on a semi-annual basis and they are cleaned when they are partially full. The lilies will be checked each year and replaced as necessary.

The City of Manchester submitted a 319 Grant application in 2010 to continue to do work in the Nutt Pond watershed. The grant was approved by the NHDES and the EPA. We selected an engineer and started design on the project. Construction will take place in 2014.

#### **# 6-7, Develop / Implement Employee Education Program – (BMP Ongoing)**

**Current Status:** The City continues to provide training to the staff who are involved with any aspect of stormwater management. A PowerPoint presentation on The State of Stormwater in the State of NH and the City of Manchester was conducted with the Engineering Group and the Sewer Crew on April 10<sup>th</sup> and the 11<sup>th</sup> of 2014. The training logs are included as Attachment E.

In the fall of 2013, the New England Water Environment Association (NEWEA), New England Water Works Association (NEWWA), and the New England Chapter – American Public Works Association (NEAPWA) formed the New England Stormwater Collaborative. The group was formed to identify and determine New England wide stormwater educational and informational needs. Based on these needs the group would determine the best ways to effectively educate, advocate, and respond to stormwater issues affecting the region.

The collaborative has ten Steering Board Members and nine Working Committee Members representing the three organizations. On the Working Committee are three members from each organization, a Chairperson from each organization from this committee were voted to serve as a Tri-Chair. The Tri-Chairs are Zach Henderson representing the NEWWA, Virginia Roach representing the NEWEA, and Robert Robinson representing the NEAPWA. Robert Robinson works for the City of Manchester.

The first order of business was to gather information on the educational needs of the members from the three organizations. A survey was developed and the group had over 400 respondents. The group is in the process of determining the next steps to provide educational support to the members.

On May 14 and 15, 2013 the City of Manchester attended the New England Interstate Water Pollution Control Commission 24<sup>th</sup> Annual Nonpoint Source Pollution Conference held in Burlington, VT.

On July 30, 2013 the City of Manchester attended and participated in the EPA Stormwater and Green Infrastructure Roundtable held in Boston, MA.

On September 13, 2013 the City of Manchester attended the New Hampshire Stormwater Management seminar held in Manchester, NH. The City of Manchester presented on Ten Years of MS4 Compliance from a Municipality Perspective.

The SEPP funding has ended for the Merrimack River "MATTERS" Program. Our department will continue to make presentations at the schools in spite of the reduced program activity that results from the cutbacks. The Amoskeag Fishways also greatly reduced their involvement with the "MATTERS" Program.

To continue the outreach to the students. The City will continue to provide tours of the WWTP and training with students on wastewater and stormwater from the three different high schools in Manchester. This program was started in 2007 and has become an annual event. We also in the past had a session with a class from Hesser College and with some middle school students. This will also continue in the future.

We have also participated in the Science Fair judging with the Manchester Water Works. The amount of funding dedicated to student outreach to promote the successful SEPP programs during Fiscal Year 2014 was \$5,000.

Manchester structures a training module for stormwater coordinators in surrounding communities during the coalition meetings. The latest meeting was held on April 15, 2014.

**BMP Effectiveness:** This BMP continues to grow, and with previous experience, is more effective with each passing year. The only area that will see a decrease in training is the work with the middle school students. The high school students are now receiving

training. Employees who work in the field and inspect construction sites are more familiar with the requirements of the Manchester's Stormwater Program.

**Future Goals:** To continue the outreach to the students and provide training on wastewater and stormwater. Participate in the Science Fair judging with the Manchester Water Works.

Continue the training of City staff regarding the stormwater program. Continue hosting the Manchester Regional Stormwater Coalition meetings. Continue attending and taking part in stormwater workshops and meetings. Continue taking part in the Soak up the Rain New Hampshire Work Group. Continue to have a representative serve as a Chairperson in the New England Stormwater Collaborative.

Work with the SCA or other student groups to complete more environmental projects around the urban ponds.

#### **# 6-8, Design & Construct Pond Specific Pollution Prevention Projects – (BMP Completed)**

**Current Status:** All pond specific pollution projects have been designed in accordance with the five-year program and the Supplemental Environmental Projects Programs requirements. This is a completed task.

**BMP Effectiveness:** Many of the benefits of these pond specific projects are outlined in BMP # 6-6. These structures have removed several hundred cubic yards of material from the river and ponds that would have otherwise entered these water bodies.

**Future Goals:** Continue the upkeep and inspections of these structures. Please refer to BMP # 6-6.

#### **# 6-9, Best Management Practices for Derryfield Country Club – (BMP Completed)**

**Current Status:** This BMP was completed. The asphalt cart path has held up well and has almost eliminated erosion in a location that was previously heavily eroded.

**BMP Effectiveness:** This BMP reduces the amount of sediment contributed from the second hole at the Country Club. Each year approximately 10 to 15 cubic yards of fill was brought in to repair the erosion caused by the winter snowmelt in this area. Since the installation of the asphalt cart path this has not been necessary.

**Future Goals:** There are no future goals regarding this BMP.

## Stormwater Catch Basin Cleaning Program

### Program year May 2013 through April 2014

In accordance with the City of Manchester's Stormwater Management Program, the City is required, under BMP # 6-2, to track the catch basins that are cleaned. This is a listing of the streets where catch basins have been cleaned throughout the City. During this reporting year over 2,000 catch basins (800 cubic yards of material) were cleaned in the below listed streets by the private contractor and by the City of Manchester personnel. Manchester is using .4 cubic yards as an estimate for each basin cleaned for material removed. Additional basins are being cleaned this spring and will be included in next year's report.

During this reporting year we had issues with both truck numbers 701 and 567. Truck number 701 is our newest truck and truck number 567 is our oldest truck. We are looking to replace truck number 567.

It is important to note that not all catch basins on the named streets may have been cleaned. If a vehicle is parked over a catch basin that particular catch basin is skipped. An outside contractor cleaned most of the catch basins on the listed streets below. City of Manchester personnel cleaned all the catch basins around the ponds and additional basins in certain areas in the City.

The listing of streets that were cleaned during the contract period of April 1, 2013 through December 31, 2013.

#### **Northern End of the City of Manchester**

- Elm Street
- Bridge Street
- Mammoth Road
- Circular Drive
- McIntyre Court
- Kennard Road
- Dave Street
- Lindahl Street
- Gerrard Drive

- Arlington Street
- Warren Street
- Nashua Street
- Union Street
- Pine Street
- Chestnut Street
- Brook Street
- Pennacook Street
- Bay Street

The following is a listing of streets, they were determined to be priority streets in the Phase I Malcolm-Pirnie study, around the City of Manchester's Urban Ponds. City personnel inspect these in the spring and City equipment cleans these at least once during the reporting year. If additional cleaning is needed, a City crew is dispatched to clean these basins more frequently. These were all cleaned at least once during 2013 by City of Manchester personnel.

**Stevens Pond**

- Pennsylvania Avenue
- Delaware Avenue
- Beaver Street (to Bridge Street)
- Maplehurst Street (to Bridge Street)
- Ohio Avenue

**Maxwell Pond (Black Brook)**

- English Village Road
