

Dear Ms. Renahan,

I live in Stow, MA, in the Merrimack watershed, where we experience the water pollution and flooding that result from inadequate stormwater management.

I am writing to convey my strong support for EPA's Municipal Storm Sewer General Permit for the Interstate, Merrimack and South Coastal Watersheds in Massachusetts.

Towns, state and federal agencies should be required to significantly reduce the amount of polluted rain water that flows through their storm drains and into our wetlands, streams, rivers, ponds and lakes.

I support a strong permit which ensures that adequate action is taken *immediately* to improve stormwater management in our watershed.

Thanks,

Mike Duclos
