

Although we have no idea as to how towns can control storm water run off, we somehow believe it could be mastered by settling beds. Therefore, we are in support of the EPA's Municipal Storm Sewer General Permit for the Interstate, Merrimack and South Coastal Watersheds in Massachusetts. We live on the Assabet River, which flows into the Concord and then into the Merrimack and sincerely hope something can be done to help with the sand, debris, and pollutants that discharge into our rivers.

Sincerely,.....Roger and Jeanne Gay
